65 sitings

Welcome to *The Net's* new Internet directory. With the net growing by leaps and bounds, it's not always easy to find what you're looking for. Our Sitings directory will help filter the net for you. It will point you to places of interest and explain what's of value there. To make things as useful as possible, we've rated Web sites according to content, aesthetics, and "techno smartness," and assigned an overall grade. The best sites we've found have been named Site of the Month. Here's a breakdown of the categories we explore:

65-67 art 67-68 bizarre 68-69 business resources 69-71 corporate 71-72 film
72-74 education 74-76 gaming 76 health 76-77 humanities 77 lifestyle
78-79 literature 79-81 music 81-82 pastimes 82-83 politics 83 professional
84-85 publications 85-86 reference 86-87 religion 87-89 science 89-90 shopping
91-92 sports 92-93 travel 94-95 vanity 94-95 web technology 96 **special focus:**

- 60 Glossary

a word from
the editor

Welcome to *The Net* in March

As you look through the magazine in your hands, you'll find a number of significant changes, all of them reflecting the two major goals of this magazine: to track the still-emerging communications medium known as the Internet, and to direct readers to places online that will be meaningful to them.

One change we've made is to create a more comprehensive guide to places on the net. Basically, we've combined our Web site review section and our Internet directory, The Blue Pages. Our new, 32-page Internet directory starts on page 65. We've broken down sites into 24 different categories, which will remain constant month to month. Our intrepid Sitings reviewers rate sites according to content, aesthetic appeal, and "tecno smartness." Those of you who get our *netPOWER* CD-ROM each month will find it has hotlinks to these sites for your optimal net surfing.

Another change you'll see is in our feature section. We're committed to covering topics in much greater depth, and to help us do so, we've asked Crystal Waters, our dedicated Reviews Editor, to step into the new position of Features Editor. This month, we're going back to basics, and then taking you beyond to the exciting possibilities available online (pages 20-60).

Don't worry, though, other things about the magazine aren't changing. We're still featuring a bizarre site each month, as well as our special humor column. News, now called Net Trends, is still at the front of the magazine (pages 12-14), as are reviews of worthwhile Internet books (page 15).

As the new Editor in Chief of *The Net*, I welcome you to explore the issue, and write me with your comments, ideas, and suggestions. Also, we love when you send us URLs for sites you want us to review (send them to sitings@thenet-usa.com). Please keep those sites coming. And, enjoy the spring!

Wanda Sandler

GET FLAT!

UNLIMITED INTERNET

netPOWER

Instructions for the CD-ROM

The March edition of *netPOWER* will expand and enhance your experience of *The Net*. It provides you with hundreds of the resources you'll read about in the pages of the magazine. So, when an article describes Web sites you want to check out, go straight to the *netPOWER* disc to

access all of those URLs; they're conveniently hyperlinked for quick 'n' easy Web surfing. Also, as usual, *netPOWER* has our March Sites of the Month; we've mirrored* seven of these special Web sites. We also offer a collection of the latest in Web authoring tools (see our Starter Kit), and lots of great shareware.**

if you were cruising the Internet and accessing the particular site. This way, you'll be able to easily access these sites at lightening-fast speed.

**Licensing information is included with each program. When you use a shareware program, you accept the responsibility to adhere to that license and restrictions. *netPOWER* claims no interest in the copyrighted programs of the individual authors. You are NOT purchasing usage rights to this software with *netPOWER*. To obtain usage rights, you must register with the developer identified in each program. After you check it out, we strongly urge you to register your software with the respective author.

To get to the Resources, Hyperlinks, Sites of the Month, and Starter Kit on *netPOWER*:

Windows

1. Put the *netPOWER* disc into your CD-ROM drive.
2. Open your Web browser.
3. Choose **Open local** or **Open file** from the File menu. (Note: If you're a Pipeline NY customer, you'll need to use a different browser.)
4. Choose **D:\START.HTM** (assuming D: is your CD drive). Be sure that the open dialog says **show.htm files** if you're using a browser from an online service.
5. If you can't locate the **START.HTM** file, make sure that under **files of type**, you've selected all files (*.*)).

Macintosh

1. Put the *netPOWER* disc into your CD-ROM drive.
2. Open your Web browser.

3. Choose **Open local** or **Open file** from the file menu.
4. Click on the desktop button, open **netPOWER**, and then open **START.HTM**.
5. Alternatively, you can drag the **START.HTM** file on top of your browser's icon to open it.

To access all other files on *netPOWER*:

Windows 95

1. Insert the *netPOWER* disc into your CD-ROM drive.
2. Under the **Start** button, select **Run**.
3. In the **Run** window, select **Browse**, and look in **D** (assuming that **D** is the letter of your CD-ROM drive). Under **Files of type** select **All files (*.*)** to view the various folders containing shareware, advertising, and tax forms.

Windows 3.x

1. Insert the *netPOWER* disc into

AOL

Windows 3.x

1. Go to the Program Manager window, choose **Run** from the file menu and type **D:\AOL\SETUP.EXE** (assuming D is the letter representing your CD-ROM drive).
2. Click on **OK** to continue then follow the onscreen instructions. When the installation is complete, double-click on the America Online icon.
3. When prompted, enter the registration number and password found on the insert that came inside the CD-ROM sleeve to begin your free trial.

Macintosh

1. Locate the America Online icon in the America Online folder on your desktop. Double-click on the AOL icon.
2. Follow the on-screen instructions and, when prompted, enter the registration number and password found on the insert that came inside the CD-ROM sleeve to begin your FREE trial.

CompuServe

Windows 95 and Windows 3.x

1. To check out the CompuServe demo, go to the **Run** window and type **D:\CSERVICE\Csdemo.exe** (assuming D is the letter representing your CD-ROM drive).
2. To sign up with CompuServe, go to the **Run** window and type **D:\CSERVICE\SETUP.exe** (assuming D is the letter representing your CD-ROM drive).
3. Then follow the simple, step-by-step instructions on your screen.

Macintosh

1. Open the CompuServe folder within the *netPOWER* window on your desktop.
2. To run the CompuServe demo, double-click on the **GO** icon.
3. To sign up with CompuServe, double-click on the installer and

- your CD-ROM drive.
2. Go to the Program Manager window, choose **Run**, and select **Browse** from your **D** drive (assuming D is the letter representing your CD-ROM drive).
3. Under **Files of type**, select **All files (*.*)** to view the various folders con-

following the simple, step-by-step instructions on your screen.

Have Questions?

If you need help signing up with CompuServe, call the company toll-free at 800 336 6823. Outside the United States and Canada, call 614 529 1340.

EarthLink

Windows 95 and Windows 3.x

1. For Win 3.X, go to the **Run** window and type **D:\EARTHLINK\WIN3.1\Setup.exe** (assuming D is the letter representing your CD-ROM drive).
2. For Win 95, go to the **Run** window and type **D:\EARTHLINK\WIN95\Setup.exe** (assuming D is the letter representing your CD-ROM drive).
3. Follow the instructions to register your new EarthLink Network TotalAccess account.
4. If at any time you need help, click the **HELP** button or press **F1**.

Macintosh

1. Open the EarthLink folder within the *netPOWER* window on your desktop.
2. To sign up with EarthLink, double-click on the installer icon and follow the instructions to register your new EarthLink Network TotalAccess account.

Prodigy

Windows 95 and Windows 3.x:

1. To check out the Prodigy demo, go to the **Run** window and type **D:\PRODIGY\Runme.exe** (assuming D is the letter representing your CD-ROM drive).
2. To sign up with Prodigy, go to the **Run** window and type **D:\PRODIGY\INSTALL\Install.exe** (assuming D is the letter representing your CD-ROM drive).
3. Then, follow the simple, step-by-step instructions on your screen.

taining shareware, advertising, and tax forms.

Macintosh

1. Insert *netPOWER* into your CD-ROM drive.
2. Look on your desktop for the *netPOWER* window that contains the folders for shareware, advertising, and tax forms. ■

Kudos on the Disc

The *netPOWER* CD-ROM is worth every cent that I paid for the mag.

Kwek Chin Lin
chinlin@pacific.net.sg

Just got the latest issue of *The Net* with the CD-ROM. I'm still new to this and wanted to say thanks for making it so easy. Looking forward to the future!!

Bryan Sullivan
bsulliva@tcf.com

No Free Rides

On pages 74 and 75 of the December 95 issue, it states that "Smartmarks" is available free for downloading from Netscape's home page. I tried to download this feature free of charge only to find out that there was indeed a charge for the "Smartmarks." Was this an error on your part, or did I miss something?

Ed Ladendorf
eladendo@pla-net.net

Netscape is distributing Smartmarks the same way it's distributing its browser. You can download an evaluation copy for free, try it out for the amount of time given in the license agreement, and if you want to keep using it, you should pay the license fee. This is very similar to the way shareware is distributed.

Not So Innocent

I am writing to express my concerns about David Sobel's column in the January 96 article in *The Net*. I have been online for about six years now, and have never really been worried about someone reading my personal e-mail. But now, because of this article, I am

really concerned about, not just someone, but my own server sifting through my mail. And if they read my e-mail, what else are they snooping into?

Is there anything that we, the public, can do to protect ourselves from being probed? Also, how can the FBI hold us accountable for unsolicited mail?

One final concern: AOL, Prodigy, and CompuServe, among others, all say that anyone who misrepresents themselves online will be terminated. So, what gives the government the right to misrepresent themselves?

Christian A Harvey
sjyp92b@prodigy.com

David Sobel responds: You raise some good questions. Unfortunately, the answers are hard to come by. Because the electronic medium is so new, many of the rules still remain to be written. The point of my January column was that users need to be aware of these issues and may want to examine the policies of their service providers (although many of the service contracts are difficult to decipher).

At the moment, the best advice I can provide is to have a healthy skepticism about the privacy of your online communications.

I was moved by David Sobel's piece on the government and AOL crackdown of child pornography (Operation Innocent Images) on the net (*The Net*, January 96).

I couldn't agree more with Sobel's spin on this. The real issue is not child pornography. The issue is, where does Uncle Sam draw the line in "protecting" the general public? If I download an image of a marijuana cigarette, am I propagating the use of that drug? If I download an image of a car that happens to be stolen, does that make me an accessory to grand theft auto? Applying the government's logic used in Operation Innocent Images, I'm guilty.

I don't believe in free expression of "art" when it includes people who unwillingly or unknowingly take part in that art. Children don't understand the true consequences or are tricked and manipulated by unscrupulous adults. If the 125 AOL sub-

scribers stung during the FBI's investigation were also rounding up the kids, taking the pictures, and then using the online service for distribution, than let them face a harsh judgment. If they weren't, but were cajoled into distribution by masked FBI agents with AOL accounts, who's really guilty here?

It's appalling that AOL changed its delete feature prior to or during the investigation. While I'm sure AOL executives will deny it and give some technospeak reason for it, what possible reason could there be for not allowing people to unload unwanted mail other than to monitor what was in the boxes? Do they have so much space on their servers they can just let people's unwanted messages pile up? I doubt it.

This was, at a minimum, a huge public relations debacle... along the same lines as Intel's "Pentium Problem." But, more abjectly, AOL did a large misservice to all online providers. It will take years, if ever, for people to believe they're not being monitored by some unknown entity. AOL and Uncle Sam shamelessly took advantage of the Internet's inherent weakness — you never really know who's on the other end of the e-mail, IRC, message, or bulletin board. Or who's watching.

Rick Blackburn
blackbur@system.abacom.it

I read David Sobel's article and I find the points he raised to be very interesting, and I wonder about a few things that he didn't mention.

First off, I find child pornography to be vile and reprehensible. However, the FBI investigation "nailed" only 125 people out of the total customer base of over 3 million. That's about .0042 percent (if my math is up to par). It almost seems that the majority needs to have its rights limited or compromised just to catch a minuscule-fraction minority of wrong-doers. I cannot condone AOL's involvement in this. So, as my new year's resolution, I will cancel my AOL membership.

And what about this cooperation to "remain free of government regulations"? I fear that without regulations of some kind, AOL and other service providers will, possibly, "bend over backwards to cooperate with the authorities" past the point of, in

the ease
of an
online
service

the
thrill
of the
internet

The complete Internet solution.

"Should I use an online service or have full access to the Internet?" With **Internet In A Box** you have the freedom of both! Browse the **Web**, participate in **forums** and **newsgroups**, shop online, **download** graphics and files, send **e-mail**, explore the resources on CompuServe and more! You also get the best-selling book, *The Whole Internet User's Guide*, making this **award-winning box** the one to buy. Jump on today and you'll be up to speed on the Internet in record time.

CompuServe

SPRY/Internet Division

316 OCCIDENTAL AVENUE SOUTH, SEATTLE, WA 98104
FAX (206) 447-9008

1-800-557-9614 ext. 53

my humble opinion, reason. From what I have been reading, Internet and online service providers need to figure out how much responsibility they have for the actions of their subscribers. As of now, there are no guidelines or models that are being followed. I am concerned that I may be held responsible for unsolicited materials that I may have received. The points that David Sobel brings up are issues that need to be examined right away.

Then again, all this hysteria over porno is exaggerated and distorted beyond any reason. Pornography has been around for much longer than keyboards, scanners, and online services. Historically, porno has been involved in almost every "mass communication" advance in recorded history, from the printing press, to magazines and postcards and video tapes. I think that porno's existence in the net is not that surprising. And the government is doing the "same old thing" (entrap, capture, and prosecute) that it has done to pornographers in the past. Maybe it's time to figure out why porno has been with us for so long and how to educate us about it.

As far as responsibilities go, is the Message Center (provided by Pac Bell here in California) responsible for the messages it saves for its clients? Is a library responsible for the way its books are used? Are Microsoft, Apple, Hewlett-Packard, or IBM responsible for the way their software and hardware is used? Maybe that could be a starting point to straighten out this privacy issue.

Oh, by the way, *The Net* is the classiest mag about the net. Thanks for putting out a zine that makes me think and laugh.

Mike Rhodes
mirho@ccnet.com

The Bill of Rights Meets Cyberspace

I was very interested in your article in your August 95 issue (page 9) on the Constitution and how it needs to be rewritten to take into account current technology. I was particularly interested in the part about the bomb-making texts found on Internet. Something that you did NOT mention, and I think you should have is, that most of these so called "bomb-making" texts were originally written by the government.

Some, like the directions for Nitroglycerin, were written specifically to kill anyone who might try to make something like that. A great number of the others are merely copied out of Army Field Manuals,

which are available to the general public through the Freedom of Information Act. Anyone can send postage and handling and a small fee to the United States Government and be mailed back a book with everything one needs to know to blow up the local Federal building.

I'm a supporter of the Freedom of Information Act and I think it's a good thing, because making knowledge forbidden just makes it more desired. If the government were to make these text files illegal, then the traffic would only increase.

My point is: It's cheaper to just go to the library or to mail the Army to get your bomb texts than it is to buy a computer, buy the Internet software, subscribe to a service, find an FTP or Web site that carries the texts, and download and print them out.

Joe Harris
joharris@freenet.columbus.oh.us

Re: AOHell

After reading your article on "AOHell vs. AOL" in your December 95 issue (page 14), I decided that I would "update" you about what is really going on, considering that no one really knows what truly is happening. AOHell is terribly old. It has updates every month and is now at AOHell 95 beta 5. There are a lot more programs out there on AOL, including Orca's Bot, Purged (a utility that quickly forwards all your mail), AOTurkey (a rip-off of AOHell), Doomsday, Ripclaw, Sw00p, AOPokis, SantaAOL, etc. The list goes on and on.

AOL has made a major crackdown on "hackers." It is now impossible to make "fake accounts." By doing this, AOL has increased the number of people asking for others' passwords. It seems that AOL has finally won this so-called "battle of the hackers." It is now no longer AOL vs. hackers, but AOL vs. ???.

I have to say that I am quite impressed with what AOL has done, although it still has "guides" and "TOSadvisors" who run around abusing their powers.

AERTDan1@aol.com

The article about AOHell in *The Net* was very interesting. I never knew that AOHell was actually that well-known. I've used AOHell myself mainly because the service itself was way too expensive and there was never a local access number in my area. I think most people used AOHell for those reasons and because they feel that America Online always censors what they can see and say. America Online, however, only solved part of the problem by having instant online credit checks. Users can still use AOHell to send e-mail bombs and they can still scroll pictures of guns and extended middle fingers.

So, there are still a few flaws that Steve Case [AOL CEO] will have to work through. I've stopped using America Online because I always felt that the service treated me like a child and because my bills were running up to \$150 a month. An America Online representative has even admitted that I never received my 10 free hours after I canceled the account. What a ripoff!!!

Micah Williams
DGV00B@prodigy.com

Stop Bashing AOL

I really love your magazine, and read it faithfully, but over the past couple of issues, I've noticed a disturbing trend, that being AOL bashing. It's obvious from your various articles and columns that you don't like the service, and if that's the case, then fine. But why must we be treated to a monthly tirade of your obvious hostility toward it? For some people, services such as AOL are the only connection they have to the Internet, as many Internet Service Providers do not have dial-ups in smaller communities. With all of the anti-AOL (and anti-online services in general) sentiment on the net right now, I was shocked to see you jump head-first into the foray, and help foster an atmosphere of hatred and mistrust!

dirtman@primenet.com

How come you're not writing from your AOL account? In any case, *The Net* believes its coverage of commercial online services is fair. We expound their virtues as well as examine the validity of reader complaints about them.

Paper Inc. Site

I have been trying for several days to log into the WebFX home page to get the Win3.1 version (January 96, page 47). I keep getting the message: "Netscape is unable to

"I wanna hold your hand!"

John Fonseca
Chief of Tech Support
IDT Internet

Of course IDT Internet gives you unlimited time, unlimited access and free Netscape for as little as \$21.75/month.

IDT Unlimited Internet

- No time limits
- No censorship
- No gimmicks
- No sign up fees
- No software fees
- No prime time surcharge
- World's fastest e-mail
- World's fastest response time

Only \$15/month
UNIX compatible

Only \$21.75/ month
SLIP w/free Netscape
(min. 1 year)

But we give you something much more important

... Unlimited tech support.

By unlimited we're not just referring to time.

We're talking quality time.

Because unlimited tech support is worthless when your techies are limited.

I'm John Fonseca -- chief of

IDT Internet tech support.

Some of my people have shaved heads, rings in their noses, tattoos on their tukkis.

Some wear turbans and talk with funny accents.

Some wear yarmulkas and take breaks for prayer.

But they all have two things in common--

-- brains up the wazoo ...

... And a real desire to hold your hand through any problem.

So if you wanna hold hands with a 180 IQ punk, a braniac from the Indian subcontinent, or an ex-rabbi who thinks at 100 mhz, there's only one way to go.

IDT Internet. Totally unlimited.

CALL 24 HOURS

find the server www.paperinc.com. The server does not have a DNS entry. Check the server name (in the URL) and try again."

What do you make of this?

Thorton Gruntnipple
thorton@icacomp.com

The WebFX plug-in can be downloaded from our January CD-ROM, and it's also available at <http://www.paperinc.com>. We've logged onto the site, so the domain is working fine. It's very possible that the site is overwhelmed by hits and not responding up to par, hence the "server busy" and faulty DNS error statements. By the way, WebFX is a plug-in for Netscape 2.0, so if you aren't using Netscape 2.0, you should download that first at <ftp://ftp2.netscape.com> or <http://home.netscape.com>. Note: There is no WebFX for the Mac yet.

Raving

The first issue of *The Net* that I came across was the November 95 issue. I bought the issue while in New Jersey as something to read during a 13-hour car trip back to Dayton, OH. Once I started reading it, I could not stop until I was finished. The variety of subject matter, from online brownie recipes to the music-related Blue Pages to hacking (as in pushing the barriers to find limits or make changes to fit OUR society and not US fitting theirs), was not only vast, but each piece of material was unique unto its own style.

To find this in a modern magazine is very refreshing, as most tomes have turned toward corporate sponsorship, and would dare not bite the hand that feed them. Your magazine is not only honest and written to be both informative and entertaining, BUT it is to the 90s what tie dye and "groovy" were to the 60s. By that, I mean that you speak to the majority of people who make up the population of the net and you do it on THEIR level. I have not checked out every Internet magazine, but the four or so that I have read besides yours all seemed to be aimed at business men and women who

simply use the net as tools to give their corporation a better image. I guess that they present their stagnant facts and images in such a manner so that they can get lots of funding from the superpower software and hardware companies. I can't blame them for wanting to be successful, but as I tossed their issues into the trash, I came to the conclusion that *The Net* (to which I both subscribe and save) speaks directly to me and does it on my level.

Wayne Stewart
stu2@erinet.com

I have bought almost every magazine on computers you could imagine. Your magazine stands out from the rest. I now buy two magazines: *Byte*, for its technical information, and *The Net*, for its great content. I recently bought *The Internet Yellow Pages*, but it fails to list some simple links. Your magazine lists up-to-date links that usually can't be found in *The Yellow Pages*. All in all, *The Net* is a spectacular magazine. I thank you, and I thank St. Jude for a great article on "Hacking" (January 96, page 11).

Zachary Porter Wright
jhwright@pgh.net

I was previously reluctant to pick up and read your magazine at the newsstand. Besides, I reasoned that all the numerous Internet-related magazines had the same shortcoming: They were aimed primarily at PC users, and thus failed to provide content of much interest to Mac-toting cybersurfers like myself. When I finally took a peek at your January 96 issue, I was surprised to find out that *The Net* contained just the right amount of Mac-relevant content. Whether you were reviewing Internet software or discussing the merits of emerging net technologies, it's good to know that your magazine tends to keep an open-minded, cross-platform perspective. For once, I've found an enjoyable Internet magazine that doesn't make me feel like "the invisible Mac user."

Marton Carungay
martonc@eworld.com

The Net magazine and *netPOWER* CD has great information that every Internet user can use. The CD/magazine contain great links to different places that normally I probably would never seen. Plus, the CD has some really unique items for both Mac and IBM compatibles, very cool! The magazine itself contains some very nice articles on what is available out on the Internet. The January 96 issue contained some great material on Virtual Reality Modeling Language

and related net technology material. I am very pleased that I subscribed to *The Net*.

Jason Thompson
thompsonj1@coral.indstate.edu

Exception to Homer

A few comments regarding your review of the Homer.94 IRC client for the Macintosh (January 96, page 36). Everybody seems to agree that Homer is the best IRC program available for Macs, but compared to what?

Homer has a great user interface, which is very Mac-like, and takes some of the arcane features out of IRC. However, Homer is very buggy, and doesn't want to function properly at all times. For example, Homer often refuses to show all of the users on a channel, either on the user list or on the channel itself. Public text from certain users simply does not appear; only the user's private messages and actions can be seen.

Another problem I have with Homer is that the DCC feature does not work properly. Homer also tends to get weird with your TCP connection, seeming to corrupt it at times.

Still, Homer is the best we got for the Mac, problems notwithstanding. That doesn't make me happy, but what can I do?

William W. Bennett
wwwbill@shore.intercom.net

CORRECTIONS:

PAINT SHOP PRO

We missed the boat in our January 96 feature, "Bargains on the Net." We said that Paint Shop Pro is free. In fact, it costs \$69 (not including a \$5 domestic shipping charge). Also, the latest version is 3.1.2. Order by calling 800 622 2793. Shareware can be obtained from <ftp:jasc.com/pub>, or linked from the company's Web address (<http://www.jasc.com>) or from its BBS (612 930 3516).

- The Atari Jaguar is not, as we said in our January 96 issue, page 20, a 32-bit game console. It uses two 32-bit processors.

- On page 42 of the December 95 issue, we listed the incorrect ISBN for *The Internet New York* book (it is 1-56830-039-5) and *The Internet Chicago* book (1-56830-038-7). In Canada, Prentice-Hall's phone number is 800 567 3800; the price for each book there is \$16.95.

- On page 87 of our December 95 issue, the URL for the IRC #CentPerk home page is incorrect. The correct URL is: <http://ccwf.cc.utexas.edu/~bhoo/friends/centperk.html>

- Page 80 of our January 96 issue had the incorrect URL for the Direct Connection's Web Editing Resources page. It is <http://www.dircon.co.uk/dircon/wwwedit.htm> ■

HELLO WORLD.

**PSIWEBSM PROVIDES SMALL BUSINESSES WITH
THE MOST COMPREHENSIVE, AFFORDABLE WORLD WIDE WEB
SOLUTION AVAILABLE ANYWHERE.**

You know your organization needs global exposure. But you don't want to pay hefty fees for each person who visits your site. It's too hard to budget for...and too costly.

As a PSIWEB subscriber, your monthly rate is based solely on the specific content of your Web site, so your costs are easy to budget and completely up to you to control. And you can change the content as often as you like - FREE.

We'll even help you promote the site for free, by posting your home page in high-traffic Web locations on a rotating basis.

What's more, PSIWEB's exclusive WebConnectSM program will enable you to provide dial-up Internet access to your important customers and hot prospects. A service they're sure to appreciate. Even better, PSINET'sSM InterRampSM software will automatically display your home page first, each time they log on, so you'll always be the first thing they see. And since your site will be running on our server, you'll never have to worry about security.

Best of all, the PSIWEB service takes full advantage of PSINET - the largest and best public Internet network in the world. So give your organization the global exposure you know you need today. Otherwise, the world could pass you by. To find out more, call

News Flashes About the Internet

The Internet has made way for a world of new development tools and philosophies, and in this new kingdom, open, cross-platform systems are the emperors. The PC industry is quickly

scripting, programming, and Web software technology. "We are excited to work with Oracle," said John Ludwig, vice president of the personal systems division at Microsoft. "By licensing the PowerBrowser OCX, Microsoft and Oracle can enable developers to bring dynamic and active content to the Web." Hmm. Does this mean Oracle will be scrapping its supposedly secret, Internet-ready, open-architecture, affordable computer system development project to build yet another Windows-based machine? Certainly, only time will tell. Check back with us on this.

If you read the January issue of *The Net*, you know about VRML, or Virtual Reality Modeling Language (see pages 44-50), the emerging

Paradigm Shift at Microsoft

realizing that closed-systems architecture and proprietary software are on their way out. The paradigm shift is happening as you read this, and companies like Microsoft, IBM, and Lotus are scrambling to accommodate this change, lest they wither away with the Commodore 64.

So it was that, as 1995 wound down, Microsoft held a behemoth, melodramatic press extravaganza in Seattle, and announced and demonstrated more than 20 new products and services. It was an all-out effort to trumpet the company's new "wide-ranging commitment to the Internet." According to Chairman and CEO Bill Gates, "the Internet is the primary driver of all new work we are doing throughout the product line. We are hard-core about the Internet." Phrases like "Internet revolution" rang out as Uncle Bill told the press masses that he wants to give Microsoft's millions of users and developers the tools they need to "ride the Internet tidal wave." The business baron CEO hyped Microsoft's billion-dollar operating system, Windows 95, the server solution, Windows NT, and the Windows Office product line as "absolutely the best vehicle[s] for business use of the Internet."

Microsoft also demonstrated its seriousness about being part of the net revolution by announcing an intent to license Java from Sun Microsystems. The plan is to make the next version of Microsoft's Web browser, Internet Explorer, Java-capable. After all, Microsoft wouldn't want its users to be unable to play the Java-enhanced game *Vectorman* online (<http://www.vectorman.com>).

Microsoft also said it will collaborate with Oracle (another leading-edge developer of cross-platform Internet technologies) to exchange

3D standard for the Internet. Well, Microsoft has an answer for that, too. Also at the Seattle press conference, it described its ActiveVRML (creative name) as the "new technology to bring interactive 3D multimedia animation to the Internet." It should be no surprise that Microsoft says it "has submitted [Active VRML] as a VRML 2.0 proposal to VRML industry working groups" as an open-architecture standard.

And, Microsoft noted that it wants to protect us with its "Internet Code Safety Initiative." This initiative suggests a 150-company pact to utilize digital signatures for authenticating the validity of specific products and companies. This would guard against "potentially malicious code and viruses," according to Microsoft's press material. The technology allows users to set a predetermined list of manufacturers' applications that are "safe" for downloading; any files to be downloaded that aren't authored and "digitally signed" by a company on the list will cause a warning message to be displayed on your browser indicating the download may not be advisable. There's nothing better than spreading around a little paranoia about viruses to pump up and establish Microsoft as the white knight against hacker attacks and, of course, to promote its "safe" products as alternatives.

Like it or not, Microsoft is sure to be in the thick of most future Internet transactions, at least for the next few years. Heck, if all else fails, maybe Uncle Bill could just buy all the phone lines... For more information about Microsoft's Internet strategies, point your Web browser to the company's Web site (<http://www.microsoft.com/internet/>). — Shel Kimen

And a URL In Every Pot...

Every American should have Internet access, and new taxes should foot the bill. So recommends the Rand Corporation in a recently released proposal that should receive yeas from online evangelists and nays from analog Luddites, and prompt fits of confusion from Newt Gingrich and his pro-tech, anti-big government brethren.

The sweeping proposal, titled "Universal Access to E-Mail: Feasibility and Societal Implications," argues that the chasm between information age haves and have-nots is ever-widening, and concludes

that universal Internet access is necessary to close the gap and foster a more inclusive society. Universal access will enable all Americans, rich and poor, to more easily contribute to democracy, communicate with government bodies, and partake in the "commercial and government transactions" that increasingly occur online, the proposal says.

In lay terms, Rand proposes that each U.S. citizen should have his or her own e-mail address. It suggests installing computer kiosks in libraries, community centers, and other local venues to serve people

who don't have computers at home. Here's where it gets really messy for the Republican Revolution: "Although e-mail penetration is rapidly expanding, some program of economic assistance to marginal consumers may be necessary... Any e-mail assistance will require public funding from an industry-wide tax or from general revenues. Subsidies will need to be narrowly targeted to reach consumers who would not otherwise subscribe."

Economic assistance. Industry-wide tax. Subsidies. During a time of wholesale downsizing and all-around government-bashing, the proposal may appear out of sync with today's political zeitgeist. Indeed, the proposal was launched before the current Congress was elected — way back when Vice President Gore was exercising his bully pulpit as the nation's tech guru, and calling for the National Information Infrastructure, a new government arm whose first goal would be to establish universal e-mail access. Still, fiscal pragmatists and Cold War nostalgics may find some of the proposal's content favorable: Rand suggests universal access could support cost-effective "electronic delivery of major government services" — for example, filing Medicare claims or income tax forms — and proposes that the borderless nature of the Internet will help Americans spread the tenets of democracy among developing nations.

During two years of research for the proposal, Rand, a non-profit think tank, collected a wealth of information on online use and its impact on building communities. The proposal can be found at <http://www.rand.org/publications/MR/MR650/>, along with scads of demographic information on who uses the Internet. The proposal also

Who Uses the Internet?

Source: Universal Access to E-Mail: Feasibility and Societal Implications

focuses on various types of online communities, including LatinoNet, an America Online area that investigates cultural and political issues, and the Blacksburg Electronic Village (<http://www.bev.net/>), the Web page of Blacksburg, VA, which features direct links to local businesses, the local health care center, and government offices. — Jon Phillips

TEN: Pioneer of Next-Generation Online Gaming

The Total Entertainment Network (TEN) has designed an Internet interface that sets the standard for online service facelifts. The interface uses a single window. A toolbar running along the bottom lets users access Internet resources, as well as TEN's proprietary content. The user can seamlessly click from Web page to chat area without having to launch separate applications.

The Microsoft Network, launched last year, and Delphi have both taken a similar tack, but with somewhat less integration success than TEN has accomplished. Apple's eWorld online service, which has gotten out of the business of hosting local content and become more of an

Internet gateway, would do well to look at TEN's technology. So would the "Big Three" online services — America Online, CompuServe, and Prodigy — which have taken a lot of flack from the Internet community because the proprietary nature of their software keeps their users insulated from the Internet. The TEN interface is the most likely model for any major redesigns online services are contemplating.

But all TEN wants to do is play games. The entire focus of its service and local content is online gaming. With the success of network-playable games like *Doom* and *Terminal Velocity*, the TEN concept is

likely to be a winner. Games playable on TEN will include *Duke Nukem 3D*, *Terminal Velocity*, *Civilization*, and *SimCity*. High-action games like *Terminal Velocity* don't play very well over the slow-switching lines of the Internet, so TEN has leased access to a separate, high-speed network. The server room at the TEN offices in San Francisco has two OC3 lines, one active and one standby, that can carry up to 155 Megabits per second. TEN's rate structure is similar to AOL's, with a monthly fee of around \$10, which covers about five hours of online time. There are additional charges for extra time used. At press time, TEN was still working on the pricing structure, including a model that would let players use more hours at a set price. TEN began beta testing on January 1. Registration and further information can be found at the company's Web site (<http://www.ten.net/>). Also, many popular new game titles will come with TEN software, so users will only be a button click away from accessing the network. — Wayne Cunningham

Who's Faster: AI or Newt?

Should we dump the Rand proposal (see above), or follow its recommendations and install universal Internet access across America? The Net decided to test the proposal's basic premise — that Internet connectivity fosters democracy — and sent this query via e-mail to Al Gore (http://www.whitehouse.gov/WhiteHouse/EOP/OVP/html/GORE_Home.html) and Newt Gingrich (georgia6@hr.house.gov). Check our Net Trends section next month to find out who answered first, who answered what — and who answered in person.

Prodigy Gets Hip

Aiming to cater to the Internet's twenty-something set of cyber-surfers for the first time, Prodigy has acquired stock in SonicNet, a New York-based division of Sunshite Interactive Network. SonicNet's Web site (<http://www.sonicnet.com/>) burbles from the bleeding edge of Web space hipness, providing material for alternative music fans. As part of the deal, SonicNet will give Prodigy members some original and

exclusive content, a direct link to SonicNet, plus alterna-pop star live online chats. SonicNet's content includes listings of music events, updated daily, in five cities; weekly reviews of a video and a record; special shows and guests several times a week; and a "Rant Dog Rant" section with a weekly provocative "intertorial."

The investment marks the first time Prodigy, a joint venture

owned by IBM and Sears, has directly funded a content provider on the Web. The funding came from a new Prodigy division called Wildflower Partners; it was created to fund Internet startups. For more information, call Prodigy at 800 PRODIGY or visit the Web site (<http://www.prodigy.com/>).

All-News Shows, All-Media Distribution

Financial news is getting hot, as a number of players launch ventures that will be available not only via cable, but also through the Web and online services. The Cable News Network has poured about \$50 million up-front for CNN Financial Network (CNNFN), which is being distributed over cable channels as well as through CNN's site on the Web (<http://www.cnn.com/>), desktop computers (users must subscribe to CNN at Work), and AT&T's Business Network, an online service.

CNNFN's initial competition is from NBC's all-business news channel. Down the road, it will compete with all-news cable shows being developed by Capital Cities/ABC and by Microsoft and NBC. In a deal announced last December, Microsoft and NBC said they would be 50/50 partners in the MSNBC cable service, which will provide 24 hours of news and information programming. MSNBC, expected to debut mid-year, will replace NBC's existing America Talking, which currently harbors more than 20 million subscribers and has committed to reaching 35 million people by the year 2000. MSNBC will also be distributed over the Microsoft Network, Microsoft's online service. Microsoft is paying a whopping \$220 million for this venture over the next four years. Visit either the Microsoft Web site (<http://www.microsoft.com/>) or the NBC Web site (<http://www.nbc.com/>) for more info.

VRML Browser For the Mac Debuts

Those on the Mac side of the fence can now download an alpha version of VRML Equinox, a special Web browser created by North Plains Systems. It allows PowerMac users to navigate the 3D virtual spaces created by the Virtual Reality Modeling Language. Unfamiliar with VRML? Just think *Doom* (and its first-person navigational perspective), or check out the Top 10 VRML sites (<http://www.pulver.com/netwatch/topten/tt21.htm>), and you'll find links to the best 3D environments. VRML Equinox can be downloaded from the North Plains' Web site (<http://www.ipssystems.com/nps/>).

German Porno Laws Affect CompuServe's Subscribers Worldwide

In a move that has broad implications for the future of the Internet, CompuServe was forced in the last days of December 95 to block access by subscribers around the world to 200+ Usenet newsgroups. The newsgroups had been deemed sexually explicit by German authorities. According to CompuServe, "Each of the newsgroups suspended was specifically identified to CompuServe by the German authorities as illegal under German criminal law."

At press time, CompuServe said it was working with German authorities to resolve the matter, and investigating "ways in which we can restrict access to selected newsgroups by geographical location." It also noted that CompuServe, "as an access provider, is not responsible for the origination or nature of content on the Internet over which it has no creative or editorial control." A list of the banned newsgroups can be seen at the Electronic Privacy Information Center site (http://www.epic.org/free_speech/censorship/CIS_banned.txt). The action by CompuServe is likely to spur interest in surf-safe software that helps users block sites and newsgroups containing material considered undesirable for minors. *The Net* looked at some of this software in the February 96 issue (page 58).

Internet Killed the Radio Star?

First, music videos supplanted consumer interest in radio, and now comes the Internet. What's a humble station manager to do? Answer: Join the fray.

Last December, KCRW (89.9 FM in the southern California area) began posting *Hollywood Wrap*, a 15-minute program employing RealAudio technology, on its Web site (<http://www.kcrw.org/>). *Hollywood Wrap* is updated weekly, and includes entertainment industry news and interviews with behind-the-scenes potentates — the kind of people director Robert Altman skewered in *The Player*.

The program, which is only available on the Internet, is hosted by Nikki Finke, a veteran Tinseltown journalist. Finke says, "It'll be plenty pithy and dishy — but definitely not wishy-washy. I hope to give Internet regulars the sort of insider's look into Hollywood deal-making that only we in L.A. know about."

Half-caf-half-decaf-double-non-fat-latte with that URL address, sir? ■

bookshelf

The Best Internet Books

Developing for the Internet with Winsock

Daunting. That's the word that popped into my head as I picked up this 600-page monster of a book, especially given its multiple references to the programming language C++ on the cover. But once I started reading the book, I discovered my fears to be unfounded. First, this book is exceedingly well-written for a programmer's manual. When the author isn't down in the trenches describing the functions of Windows Socket API, his commentary is quite personable and fun to read. The writing in the technical part is also very easy to follow, even for someone like me, who has a mere acquaintance with C++.

After a brief history of the Internet, the book gets into TCP and IP structures, and the concepts and functions of Windows Sockets. A chapter lists 12 C++ WinSock classes (an excellent programmer's reference), then that takes you through a basic programming project. Having an example to work on is a great way to learn. Later chapters delve into how to program for various Internet applications.

For \$39.99, this book seems like an incredible value as a means of expanding a programmer's expertise. And, I haven't even mentioned the CD-ROM that comes with this book. It not only has the Winsock classes, so that all you have to do is cut and paste instead of rewrite, it also has some fun tools like a VRML browser. Good stuff!

The Computer User's Survival Guide

Interesting. Very, very interesting. I had no idea when I looked upon the book's cover illustration of bandaged, bruised, and stressed-out personalities exactly what it was that I would be surviving. I was prepared for a little dark humor, but I found nothing of the sort here. This book's about ergonomics and how to preserve your mental health if you use computers all day long.

It's thorough, and comes laden with diagrams to guide you toward attaining straight posture and proper keypad positioning. There are charts showing the appropriate distances between all the elements — chair, monitor, desk, etc. These medical recommendations don't come unsupported, either. Stigliani backs up her advice well with background information on how some of our muscles work. She also outlines specifically *why* and *how* these dangerous conditions hurt us.

The section on stress is a little tongue-in-cheek, but if you're under enough stress to make *that* the reason you bought this book, then maybe tongue-in-cheek is what you need. There are skads of handy little lists of stress warning signs. These are followed by action steps that will help alleviate pain, stress, and miscellaneous health problems related to too much computer use. I'd say if you are working the 9 to 5 (or 6,7, or 8) computer-type job, you should go out right now and snag a copy of this book.

Web Publisher's Design Guide for Windows

While there are several books on "great Web design" flooding the bookstores at exponential rates, some with less aplomb than others, I can highly recommend this one. It's fantastic for graphic designers creating Web spaces with Windows — that last part seems a bit paradoxical, but no matter.

The book offers an exceptional layout (as it should), and uses a very accessible tone that guides both new and experienced designers through the world of online publishing. It spans everything from how to specify background colors to tips for successful 3D rendering compression.

It pays serious attention to the different types of Web servers, why it's important to know about them, and what you'll need to learn to understand and take advantage of their various quirks. Image maps, texture maps, and pointers to other helpful reference materials give this book a well-rounded balance that significantly blows away others in its genre.

The companion CD-ROM is hardly worth mentioning (a few shareware programs and some HTML editors are included, but that's all). So, don't buy it for the disc included. Buy it because it's a great book (with a flashy full-color insert in the middle). It'll provide Windows users with a great start to designing Web pages.

— Shel Kimen ■

Stevan Alburty

Forward Into the Past

Quoting the ex-husbands of Liza Minnelli is not a practice in which I frequently engage, but her first — songwriter and singer Peter Allen — often crooned (with far too much exuberance, I might add), “Everything Old Is New Again.” That song title has been swimming upstream in my *tabula rasa* recently, for the personal computer industry is gingerly maneuvering its way back toward an architectural model that went out with the Nehru jacket: the dumb terminal.

Some of the biggest names in the business, including Compaq and Sun, are busy in their engineering labs designing stripped-down PCs (i.e., no CD-ROM, no hard drives) that will be good for nothing but browsing the Internet. Priced, or so the manufacturers aim, at under \$500, these Internet-only boxes represent a return to the days when computing was much more fascist and far less fun.

Once upon a time, computers were bigger than your average New York apartment and required teams of men with overbites and crew-cuts to care for them. Users sat at workstations connected to these “mainframes” through fat cables and got migraines from staring at green screens that glowed and ghosted from old data left displayed during countless lunch hours, disjointed words and numbers now permanently etched like *data pentimenti* into the monitor’s phosphors.

All of the users’ crunched numbers and processed words, as well as the programs themselves, lived on the central mainframe computer. The workstations’ sole functions were data entry and display. Although the cost of buying and maintaining one of these mastodonic mainframes was staggering, their efficiency from an organizational perspective was nonetheless impressive. A company’s most valuable data, its institutional memory, was organized and could be accessed in a consistent, coherent manner.

In the late 1970s, the two Steves,

Jobs and Wozniak, emerged from a garage south of San Francisco holding a prototype of the first mass-market personal computer. A shift of almost paleontological proportions had occurred: Programs and data were now placed at the local level, distributing both the processing and storage of information out to a diaspora of unconnected devices. A company’s budgets, sales figures, and correspondence were stashed on fragile floppy disks and hard drives, which were rarely backed up and could be erased or carted off by a disgruntled employee faster than you could say “exit interview.”

The advent of networks and servers brought modest improvements to this free-wheeling disorder, but many IT (Information Technology) managers still let users devise their own filing structures, and despite the development of Microsoft’s object-linking and Apple’s publishing and subscribing, the vast majority of user-created documents were still informational islands, swimming alone in a sea of isolated files.

In the mid-1980s, corporate IT managers fell in love with the concept of “client-server computing.” In this architectural model, the processing and storage of data were returned to a central device, usually a mainframe, mini-computer or database server, while the display of the information was left to the PC, thereby preserving the aesthetic richness users had come to expect from more personal computing experiences.

Like all romances, the early passion for client-server computing soon gave way to some cold realities — the development costs and deployment issues often proved economically prohibitive and logistically complex. IT managers began wistfully pinning for the old mainframe days, when all you needed to create an enterprise-wide application was some “big iron,” a pencil-protector and a dream.

Internet “browser” software, like Netscape, is designed to sit passively on a user’s computer and await display instructions from a remote Web site. “Here’s a graphic, display it in the center of the screen,” says the remote server, and the browser does what it’s told. “And now, here’s some text — make it look like a headline, etc.” The browser is basically stupid. The real programming instructions are stored not on your PC, but on the Web site you visit.

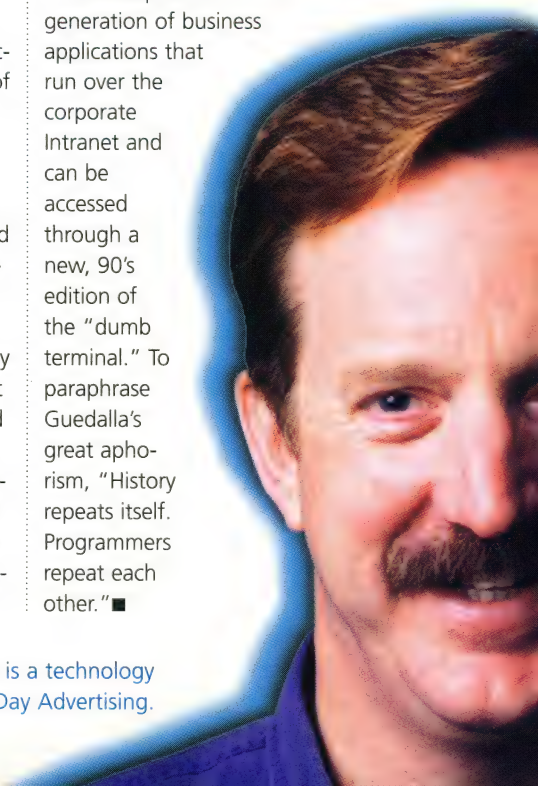

This “browser-server” architecture is growing in popularity and power. Sun’s Java programming language enables a Web site to bury small programs called “applets” within a Web page.

Those miniature applets are then executed by the browser as it surfs the site. One applet might draw a chart using some sales figures. Another might add up a column of numbers, or beep and tell you you’ve just entered an incorrect zip code into an address field.

This type of advanced interaction between server and browser may enable the development of a new generation of business applications that run over the corporate Intranet and can be accessed through a new, 90’s edition of the “dumb terminal.” To paraphrase Guedalla’s great aphorism, “History repeats itself. Programmers repeat each other.” ■

The PC industry is maneuvering its way back to an archaic model: the dumb terminal.

The Internet: Hype versus Reality

It seems that everyone is interested in the Internet these days. From Congress to Wall Street to your hometown newspaper, the rush is on to hitch a ride on the digital bandwagon.

I've been trying to separate the hype from the reality, and I'm finding that it's not easy.

As most people who follow net.issues know by now, Congress has decided that the Internet is becoming so pervasive that new laws are required to regulate its content. The reasoning seems to be that any 10-year-old can easily surf the net and access all manner of inappropriate material. Indeed, the legislative frenzy to control electronic "indecentcy" appears to have grown out of Senator James Exon's observation that his young granddaughter is computer literate. You know a technology has arrived when an elderly legislator from Nebraska decides it's a menace to the nation's morals.

Next stop, Wall Street, where "Internet stocks" are all the rage. Unless you live in a cave, you know the

Netscape story: Small startup firm that has yet to turn a profit goes public and its market value more than quintuples within a few months.

That would be remarkable enough, but consider the

Spyglass story: Netscape's competitor goes public and does even better! Not bad for small companies that barely existed a year ago. All that seems to

matter to investors is that these firms have something to do with the Internet.

Has your local newspaper gone digital yet? Mine has (*The Washington Post* recently went online with "Digital Ink"). There are a lot of things I like to access online, but the daily paper is not one of them. The hardcopy version only costs a quarter, so why would I want to incur the higher cost of reading it off my computer screen? And, aside from cost, why would I want to read it off my computer screen at all? I usually read the newspaper on the subway — it's one of the few remaining times when I can be untethered from my keyboard. I have not yet heard a good explanation of why I need a digital newspaper (but feel free to e-mail me if there's something I'm missing here). Despite the lack of need for this latest high-tech innovation, most major newspapers feel compelled to go online. They've gotta have a presence on the Internet.

So, why is everyone from legislators to speculators jumping on the net? The belief seems to be that the Internet, and especially the World Wide Web, really might revolutionize the way we communicate and transact business. And some recent numbers appear to support this belief. A survey conducted for CommerceNet by Nielsen Media Research found that there are 24 million Internet users in the United States and Canada. The "demographic survey" (a summary of which is available at <http://www.nielsenmedia.com/whatsnew/execsum2.htm>) also reports the following:

- **31 percent of Internet users access the net on a daily basis.**
- **53 percent of Internet users are between the ages of 16 and 34.**

- **25 percent of Web users have an annual income of more than \$80,000 (compared with 10 percent of the general population).**

- **64 percent of Web users have a college degree.**

- **2.5 million people have already made purchases using the Web.**

These numbers explain a lot. In fact, the "Internet stock" hysteria really took off after the survey was released. For anyone interested in selling something on the net, these are great demograph-

ics. The Internet is populated by young, affluent, educated people — potential customers. Many of the net's early pioneers are not happy to see what's become of the old frontier. Some are even re-thinking their optimistic predictions of a digital utopia. One of the first reassess-

ments came from Cliff Stoll, who's been on the net since its early adolescence. In his book *Silicon Snake Oil: Second Thoughts on the Information Highway*, Stoll writes that the Internet "is an over-promoted, hollow world, devoid of warmth and human kindness. For all the promises of virtual communities, it's more important to live a real life in a real neighborhood." I think that observation rings true for anyone who has spent time (too much time?) on the net. And, as the commercial billboards become more prevalent on the infobahn, it will become even less hospitable.

So, what's the hype and what's the reality? More people will come online, lots of money will be made, the technology will continue to improve, and government regulation will increase. But life as we know it will probably remain unchanged. ■

You know a technology has arrived when an elderly legislator decides it's a menace to the nation's morals.

Mutate This Afternoon, Please

From catspaw@Rt66.com
Subject: BigSys: Part Deux

Hullo Patroness of Lost Causes,

I agree with the idea of changing the culture; it could use a helluva lot of changing.... But, I ask, into what? My ideal end-product (no more medical moralizing, get Uncle off our backs, and a few more manners here and there) probably isn't even close to a lot of other people's ideal.... Tasty column; it convinced me to subscribe-

L. Y. Williams

Yow! What a response! The sincerest form of flattery is subscription. But look here, catspaw — How do I know; change society into what?

I'm just saying that society now fits us like a cheap shoe with a nail poking through the sole, and our usual response is to grow calluses... or corns. If we look at society as repairable — recobbleable, in fact — well, who knows what weird shoes we might wear? Makes my metaphorical toes curl!

Y'all keep whining at me to come across with some actual instructions for mutating, hacking the culture, etc. What do I have to do here? I keep commanding you to think for yourself, and you keep on not following my orders.

But here's an idea: Practice noticing, at least once a day, what you think you're doing. And, why the hell are you (doing it)? And, could you do it differently? This is the most elementary use of hacker mind — to hack one's own life, moment by moment.

I don't mean in favor of spontaneity. Spontaneity, pfui — instant magic, everything Zen, I think not. Zen archers, calligraphers, and seminar-givers practiced for decades to be spontaneous. It takes a certain amount of effort to be a successful hacker, especially of human behavior. Especially of your OWN behavior. Takes thought. Intentionality. Implementation.

Hacking your life seems like a place to start. If you find new ways of doing things — some people might call it pushing the envelope of weirdness — you might change everything. I'm not talking on the level of law, but on the sublevel of ADMISSABILITY. What is allowed to be thought, to be acted upon, before somebody calls the cops. I grew up in straightened circumstances (among straights) — and having more room to be weird is

exquisitely pleasurable to me. Nowadays, society accommodates more, flexes more when you push at it, with less repressing of weirdies, less killing off of mutations. Maybe it's a good idea to push further. Pushing on:

Jude—

.... The whole idea of combining the concepts of beginner's mind, monkey mind, anarchism, and hacking into a new paradigm could very well bring about a new revolution, a new stage of evolution. There is NO area of culture that would not benefit from such a shift in thinking (you Peking Butterfly you).

Hacking in the trees,
L. A. Hazard

I'm reading evolutionary psychology right now — hold on, Hazard — Hey, YOU! Random browser, don't turn that page, you soundbyte, lemur-brained leaf-muncher. Listen! If you're ever going to start tinkering with your engines of creation, you'd better get a mechanic's knowledge of the machinery. I'm trying to tell you about *The Lemurs' Legacy* by Robert Jay Russell. He starts out suggesting we might at least seize the wheel of said machinery and take it for a wild ride, woooooo.

He doesn't talk like that, however, and he goes on to detail our dismaying history. Oh man, the monkey behind our useful monkey mind makes a chilling read. But, we must know what we're

working from. And understand how posterous it would be to keep on keeping on. When we study evol psych we're examining the software that comes installed in our hardware, in our evolved meat body. From this, we can see about

This is the most elementary use of hacker mind: to hack one's own life.

designing us some BETTER software. We can alpha-test new designs in ourselves, and beta-test them in our friends and sig others. And then... evolutionarily, what works better, persistent-

ly... supplants. Inherits the world. Engineered evolutionary success. Ahhh. If there are any evolution scientists out there, calm down. The idea of evolutionary success has a whole other dimension when you deal with humans, because our cultural entities — memes — have their own breeding rules, and you can spawn a planet full of brilliantly successful children overnight, via a single idea. This beats hell out of the old mutate/breed/evolve meatly stuff. Furthermore, only populations evolve in your meat model — individuals can't. NO fun. I think the mutate-yourself meme may be starting to ramify like fungus in the darkness of popular culture, and godz know what mutations will sprout and spread. Hmmm.

You, reader. Yes, YOU: You ARE gonna mutate and take over the world, right? Next: What's the ugliest part of your body? ■

St. Jude (stjude@aol.com) has written (with R.U. Sirius) a self-help manual called *HOW TO MUTATE AND TAKE OVER THE WORLD*, now in bookstores everywhere.

INTERNET

basics & beyond

The Internet is *The Net's* home away from home, as it has become for many millions of others. Instead of going to the library, we research online. We save money on stamps and overnight mail by using e-mail for our personal and business correspondence, and we meet with people for live chats rather than spend big bucks on a plane ticket. And those of us who do have to fly somewhere use the Internet and the commercial online services for flight, hotel, and car rental information.

Even online experts are constantly learning new things from and about the net, and more and more beginners are hopping on the Internet track to work, play, and learn. This month's feature offers a netpourri of information on how to get online and how to take advantage of the net once you get onto this worldwide network.

Computer advertisements and television commercials are always touting the wonders of plug-and-play Internet connections, so we decided to investigate in-depth a few of these all-in-one computers. How easy are they to set up? Are they really plug-and-play, or are they simply easier to set up now than they were three years ago? Just what good does all that "free" software do for you? Our comparative chart is a great companion on your next computer shopping trip (see pages 21-25).

Moving on, we help you decide whether you should go with a commercial online service such as Prodigy, or pay a local Internet Service Provider for your net connection. We also calculate what a typical month's worth of net usage would cost on the major online services (see pages 26-28). Once you're

online, you can find the sites you're interested in by using some of the many search engines out there. Check out our guide to the popular search engines, such as Yahoo! and Lycos (page 29), to find the one that's right for you. But if you want to visit some spectacular sites right away, or find a list of places to go for more help, try our recommended "First 10 Places to Visit" (page 30) and our "Web Resources" (page 31), respectively. Need some help figuring out what additional pieces of software you'll need to do things like watch videos or hear music on your computer? Our mini Helper Apps tutorial should provide some relief (page 32). So, what are you going to do with yourself once you're online? One of the cool

things we use the net for is to create custom newspapers that send us the news we want to read (pages 34-37). Do you like music? We offer a list of Web sites where you can get a taste of tunes, as well as software so you can hear the music (page 46-47). Or maybe gaming's your thing (pages 50-51). Is investment more up your alley? We'll show you where to get the best investor tips and advice (page 53). And not only that, we'll offer some tax tip sites, as well (page 55).

As you can imagine, there's no way we can cover even a small percentage of what's on the net in one issue. It's our hope, though, that if you're not connected, this will help you get online. And if you're already hooked, you'll find tips and topics that you just might not have traversed upon before. ■

COMPUTERS MADE FOR THE INTERNET

How much would you pay for a computer with a 75 Mhz Pentium processor, a one gigabyte disk drive, a 28.8 Kbps modem, and a monitor with stereo speakers? Wait...Don't answer yet! What if I told you that you could have a quad-speed CD player, MPEG video, expansion slots, and a telephone answering machine? No, don't answer yet! Now, how about a bundle of free application software, CD-ROMs for the whole family, and four or five different ways to get onto the Internet? And it all comes in one box.

O.K., you can answer now. If you've spent any time in a consumer electronics store lately, you know the answer is around \$2,500, and that term "all-in-one" means you can take a complete system home with you, confident it will have all of the necessary hardware, and plenty of software to get started. The combination of home multimedia and a hunger to get online has brought to market a class of Macs and PCs whose real-life buzzword is "plug-and-play."

We took a look at a bunch of all all-in-one PCs: Some are one-box units with monitor and CPU, while others are simply desktop and tower systems

intended for home users. All included online, telephony, and multimedia features. We also spent considerable time with three leading systems: the Apple Performa 5215CD, the Compaq Presario 9548, and the IBM Aptiva M55. In addition, we looked at the specs for a number of other machines to give you an idea what to expect when you go shopping.

SPEC SHEET

Some people buy a computer based on the specs. Others buy one based on the software included, the graphical interface, or even the sound and video accessories. Home computer makers know this. Most models include the fast Pentium or PowerPC processors found in the corporate world. Hard disks are spacious, and nearly every one of these computers includes a quad-speed CD-ROM drive. You'll find that some manufacturers skimp a bit on RAM (offering only 8 Mb, where 16 is optimal and not much more expensive), and modems (lots still slog along at 14.4 Kbps). Home systems usually come with a mid-sized monitor, or a choice of a couple of monitors from the same manufacturer. True all-in-one PCs include a CPU, a monitor, and speakers in a single case. For those who

don't want to tinker, home PCs provide custom interfaces on top of Windows 95 or the Mac OS, to make software easy to find and use. Software titles usually include an integrated Works package, financial management applications, a CD-ROM-based encyclopedia, games, and kids' programs. Custom graphical interfaces, like Microsoft Bob or Hewlett-Packard's Personal Page, are designed to make computing more intuitive. LaunchPad, an interface for kids, also has security features that protect your files from the little ones' curiosity. Not all home PCs include these interfaces, so seek or avoid them, according to your preference.

When it comes to software, it's quality, not quantity, that counts. The tags that say you're getting "a \$1,200 value" should be taken with a grain of salt, since some of the software you get is either available only with a PC bundle or consists of demo versions of a product the vendor hopes to sell you later. Some machines have better bundles than others: Gateway 2000 and Compaq cram their boxes with interesting *and* useful software. Don't assume that all models from a manufacturer include the same software bundle. Take a look at the list before you presume that the high-end model you chose has the same

stuff as the all-in-one unit on display has.

WORLD CONNECTIONS

It seems that every home system comes with at least one online service membership kit. On all Windows 95 PCs, you'll find Microsoft Network (MSN). All Macs come with Apple's eWorld. Most PCs also give you America Online, CompuServe, and Prodigy kits, with free hours as the reward for signing up. IBM adds its own Internet provider, and

Compaq bundles several services. But it's not the software you get that determines the quality of your access. After all, AOL disks are as ubiquitous as dirt, and lots of Internet software is shareware.

Despite the fact that Mac users account for more than their share of Internet accounts, it's the new breed of Windows 95 PCs that offer built-in SLIP and PPP connectivity. You can use Microsoft's integrated Internet Explorer to surf, whether or not you've joined MSN. Windows 95's

net tools aren't ideal or complete, but they'll get you connected. You may have trouble if you try to use both MSN and an ISP account.

If you opt for a Mac and don't take the eWorld route, you'll have to get a SLIP or PPP tool (such as ConfigPPP) and browser software. Apple's MacTCP has, thankfully, been included with the operating system since the release of System 7.5.

When your modem isn't busy online, it can arbitrate fax and voice calls

to the phone answering system included with most home PCs. Answering systems vary in interface and features, but basically, the computer takes your messages. IBM's Aptiva can even turn itself on when the phone rings. Compaq's Presario lets you check messages remotely with a voice-activated system. You can also create mailboxes for each member of the family. Fortunately, the answering system comes standard. There's no need to buy extra software or hardware.

A LOOK AT THREE ALL-IN-ONE COMPUTERS

apple macintosh Performa 5215CD

In the spirit of the compact Macs that started it all, the Performa 5215CD puts everything — CPU, monitor, speakers, microphone, and modem — in one box. Like its PC counterparts, the 5215CD includes a CD-ROM drive and a large hard disk full of software.

The 5215CD is the best Performa that Apple has developed to date. But a few little things — and it's always the little things that count — make it a great family machine.

pluses

The Performa is compact and easy to figure out.

The tutorials are good, and the Mac operating system is the least challenging of any out there, for kids and adults alike.

The machine comes with lots of good software, including the MegaPhone-based telephone answering system, ClarisWorks, Quicken, and the American Heritage Dictionary.

Most of the CDs are full-fledged titles, not demos designed to get you to buy full versions.

minuses

Apple has finally given up its past stinginess when it comes to hard drives. You get a 1 GB disk with the 5215CD. Unfortunately, the same can't be said for RAM. The unit comes standard with 8 Mb, which will accommodate two modest applications, or one big one. The system software takes up almost half of the available memory unless you do some tinkering with the System Folder. Also underpowered is the modem: a 14.4 Global Village Gold II model. It's a fine modem, with nice fax software, but it's a bit behind the times.

If you want to go online with the Performa, say hello to eWorld, Apple's online service and Internet access offering. eWorld, which looks like America Online with a face lift, has forums, downloads, and a Web browser (the latter is identical to the Mac version of the AOL browser), but you'll have trouble fitting the eWorld app and the browser in the 5215CD's 8 MB of RAM. Get a memory upgrade before you combine the Web with eWorld. The 5215CD does come with MacTCP, Apple's TCP/IP stack, but you'll need shareware or commercial connection programs and browsers to use an ISP account.

Bottom line

As all-in-one computers go, the Performa 5215CD is well-equipped, with a fast PowerPC 603 processor and most of the internal features you'll need to use multimedia and other demanding applications. Apple recently came out with a Powerhouse modular Performa, the 6300CD, which may better suit those who like maximum choice of monitor and expandability. Of course, it costs more.

compaq Presario 9548

Everything makes sense with the Compaq Presario. It's a well-designed, well-outfitted computer with a ton of cool software and the largest number of online options of any machine that

we reviewed. Compaq sells three Presario form factors: all-in-one, desktop, and mini-tower. We looked at a mini-tower system with all the basics, some bells and whistles, and lots of room for expansion.

+ pluses

In addition to a nice box (100 Mhz Pentium, 1.6 GB disk, 16 Mb RAM) and a multimedia monitor (sold separately) with outstanding stereo speakers, Compaq excels on the software front.

In addition to the standard Windows 95 interface, Presario users can choose from TabWorks, Activity Manager, or LaunchPad; each offers a different view of folders and files. LaunchPad, for example, is a Berkeley Systems product tailored to kids. TabWorks looks kind of like a filing cabinet, with tabs representing application groups and folders.

Compaq doesn't have an online service or Internet Service Provider of its own. Perhaps that's why the disk contains so many choices for access. You can pick one of the big three online services or Microsoft Network, or more specialized services, like Reuters' MoneyNet and the ImagiNation Network. Netscape Personal Edition includes the Navigator Web browser, Eudora Lite mail software, and a registration system that will help you choose a service provider.

Compaq's telephone and fax software is full-featured and intuitive. You can create a voice-activated answering machine for your household, with mailboxes for each member.

□ minuses

You'll find lots of great software on the Presario, but no backup CD-ROM. If your hard disk dies and you need to reinstall the operating system, you're out of luck unless you've followed Windows 95's suggestion that you back up onto 30 floppies.

Another downer: There's a glitzy introductory video from Compaq that dazzles with graphics and sound. After it's over, you'll find yourself ushered into a similarly hip promo for America Online. The video and sign-up process run automatically and greet you before you've even had a chance to scope out other online options. This creates a Mack truck effect that we didn't appreciate.

Bottom line

Compaq and its machines are class acts. Given the quality of computers, monitors, sound, and video, they're reasonably priced, and come in enough permutations and expansion options to satisfy lots of budgets.

The software bundle and operating environments are great, and the setup is relatively painless.

IBM Aptiva M55

The Aptiva is the only line of computers we know of that offers a choice of operating systems. You can get IBM's OS/2 Warp, or the ever-popular Windows 95. Until Win95 shipped, you could also get an Aptiva with Warp and older versions of Windows. Due to the persuasiveness of the new

Microsoft offering, OS/2 Warp machines now have separate model numbers. You have to choose before you buy.

In other respects, Aptiva is a standard PC. Speakers are included with this and all models, and you can buy one of several multimedia monitors separately.

+ pluses

Aptiva M55 is a nice machine. It includes a fast (100 Mhz Pentium) processor, a large disk drive, and 16 Mb of RAM. Including the speakers with the CPU is pretty nifty. So is putting in a 28.8 Kbps modem and telephone answering system, which can turn the machine on when the phone rings. You also get MPEG support and CDs that take advantage of it. Your online access choices include IBM's own ISP, as well as the Microsoft Network, AOL, CompuServe, Journalist (a CompuServe-based clipping service), and Prodigy.

IBM offers an innovative support option called HouseCall. By dialing into your machine, an IBM technician can poke around, diagnosing configuration and other problems remotely while talking to you over the same phone line. That's a lot more efficient than trying to describe your setup over the phone — especially for novice users.

□ minuses

The whole operating system choice arrangement is a bit confusing. Our Windows 95-only Aptiva included instructions for choosing between OS/2 Warp and Windows. A sticker on the box also promised "one-button Internet" with Warp. We were looking forward to that. But through Aptiva's tutorial, which runs at startup, was adequate, it didn't do much to help us get online. With it, we could easily find our way to IBM's Internet offering and the online membership kits for the included online services. However, no mention of the Microsoft Network, the differences between, or advantages of, the different services was present. Like many online services with electronic sign-up, IBM's doesn't offer price information until you've gotten online and, incidentally, entered your mailing and credit card info. ■

Bottom line

The M55 is a very good machine in the upper-middle performance range, but it's a bit pricey at \$2,599 without a monitor. There are several Aptiva models (with 75 Mhz Pentium processors and 8 Mb of RAM) below \$2,000. All offer the same software bundle and some form of upgrade path.

WHEN SHOULD YOU CHOOSE A COMMERCIAL ONLINE SERVICE?

Minda Sandler

The decision about how precisely to get on to the Internet has been made much more difficult, or much more exciting, depending on how you look at it, by the phenomenal growth and popularity of the World Wide Web.

The Web is a graphically based interface to much of the Internet — and getting access to the Web is often the motivating factor for many to get online.

It took the online ser-

vices years to give subscribers Web access, but now, America Online, CompuServe, and Prodigy all offer Web browsers and Internet access. So does the Microsoft Network, the online service Microsoft launched when it introduced Windows 95 last August.

How do you know if a commercial online service is the right choice for you? A lot depends on what you want to do online. If you plan to spend a lot of time on the net, the commercial

online services will quickly eat up a big chunk of your money each month, since they usually charge by the hour after you've used up a certain number of "free" hours per month. A better route for you would be to join an Internet Service Provider (ISP), either a national or local one (more on that on page 28).

On the other hand, if you're very new to the online world, the commercial online services can be quite useful. This is particularly true if you don't

have any other communications software. In addition to Web access, they have members-only content that is a big drawing card. Lots of people sign up with one of the online services to get their feet wet in the online world, then start an ISP account once they've decided they want to spend more time on the net.

Below you'll find information about the major online services, to help you see if one is right for you at least for now.

Sign-up Numbers: 800 827 6364, 703 448 8700
Pricing Structure: \$9.95 a month (includes five hours); \$2.95 for each additional hour.

AOL is geared to adults in their 20s and 30s. It's particularly good for online beginners, because it has step-by-step screens to help you navigate through the service.

PRO

- Access to the Internet is relatively simple, and you'll be able to effortlessly move back and forth between American Online and the net.
- AOL lets you connect using 28.8 Kbps modems in most U.S. cities, which is nice if you plan to visit the graphically intense Web a lot.
- People who are somewhat intimidated by computers or the net will find that AOL offers a buffer between them and the technology. For instance, there's voice-prompting to tell you when you have personal mail, and to give you a brisk good-bye when you sign off. You may find this either terribly annoying or comfortably reassuring.
- AOL offers an easy-to-use service — My Home Page — for setting up your own home page on the Web. Each AOL member gets 2 MB of space (approximately 25-40 Web pages). That makes setting up a Web page a pretty painless process.

CON

- AOL updates its gateway screens with tremendous frequency. It can be incredibly frustrating to have to wait for what most users consider gratuitous artwork anyway to load (especially since you're paying for the time it takes AOL to update the screen).
- AOL's Web browser, which is integrated into its regular service, is not great, especially in comparison to what Web browsing is like with the Netscape browser.
- A lot of people in the Internet community are derisive of AOL addresses, which could make some of your interactions on Usenet newsgroups a bit unpleasant.

Sign-up Numbers: 800 848 8990, 614 457 8600
Pricing Structure:
Regular Subscription: \$9.95 a month (includes 5 free hours); each additional hour is \$2.95.
Super Value Club: \$24.95 a month (includes 20 free hours); each additional hour is \$1.95.

Traditionally, CompuServe has reflected the needs of the most typical users of the net: male, white, aged 30-50, experienced with computers, and affluent. It's also been more serious-minded than AOL and Prodigy, catering to a business-minded audience. Unlike AOL and Prodigy, CompuServe hasn't built a Web browser into its interface. Instead, it's turned its access lines into a nationwide Point-to-Point (PPP) connection network.

PRO

- You get to choose whichever Web browser you'd like (and many of the choices available can be downloaded from CompuServe, including CompuServe's Spry Mosaic browser).
- Having a less graphically intense interface hasn't meant a sacrifice of ease-of-use: CompuServe's icons and menu bar are both user-friendly.
- CompuServe's decision to provide a PPP hookup means that you have a direct link to the Internet.
- You're responsible for finding your own software and making configurations work smoothly, which is great for those who want flexibility and choice.
- CompuServe offers Web page creation forms.

CON

- Getting to the Web is a bit more difficult and requires you to work a little harder than you have to on the other services. It's also less easy to move back and forth between CompuServe and the net.
- It's less pretty than the AOL, Prodigy, or Microsoft Network.
- You're responsible for finding your own software and making configurations work smoothly, which is not so good if you don't like twiddling with configurations or having to go look for software.

Like AOL, Prodigy is designed to be colorful and personable. It's also especially geared toward families with children. It was the first commercial online service to offer Web access.

PRO

- Like AOL, Prodigy is quite easy to use, especially if you're familiar with Windows.
- Again, like AOL, Prodigy makes access to the Internet relatively simple, and lets you effortlessly move back and forth between Prodigy and the net.
- A redesign of what was once a clunky and outdated interface has brought Prodigy roaring into the 90s.
- There's friendly and good tech support.
- Prodigy's Web browser, which like AOL's is integrated into the service, is functional and easy to use, though it's only available to Windows users.
- Prodigy offers an easy-to-use service — Prodigy Web Pages — for setting up your own Web page and storing it on Prodigy at no extra

charge. The service has 10 fill-in-the-blank templates that let people who aren't skilled in HTML create their own pages. People who've created more complex pages using Web authoring tools of their choice can cut and paste their pages into a "free-form" template and use Prodigy to store them. Prodigy also has its own Web authoring program.

Sign-up Number: 800 776 3449

Pricing Structure:

Basic Plan: \$9.95 a month (includes five hours; \$2.95 for each additional hour per month.
30/30 Plan: \$29.95 a month (includes 30 free hours of usage); each additional hour per month is \$2.95. [Prodigy recommends that once you spend at least 12 hours online a month, you upgrade to the 30/30 Plan.]

Notes: All members automatically enroll in the Basic Plan, but can choose to upgrade to the 30/30 Plan once they've joined.

CON

- Prodigy has a family appeal that might turn off the 20-something crowd.
- Access can be slow due to its heavy graphical interface.

Sign-up Number: Information available at <http://www.msn.com/msn.htm>

Pricing Structure:

Standard Plan: \$4.95 a month (3 free hours); each additional hour is \$2.50

Frequent User: \$19.95 per month (20 free hours); each additional hour is \$2.00

Microsoft Network is built in to Windows 95, so you have to have a PC, Windows 95 (which costs \$109 as an upgrade or \$209 for a new installation), and a modem to use the online service. To turn MSN into a true Internet connection, you need to get the Internet Jumpstart Kit, an add-on that's available through Microsoft Plus! (\$54.95).

PRO

- To use Microsoft Network (MSN), all you need to do is double-click on the MSN icon on your desktop and you'll be walked through the sign-up process.
- The sign-up sequence, welcome page, and the graphic navigational

system were designed by highly respected Web site designer Clement Mok Designs, and this shows. The design team has stayed away from the graphically intense design used by AOL and Prodigy in favor of a spare elegance that doesn't require extra waiting time for the graphics to load but still looks great.

- MSN's Internet connectivity is quite fast.

CON

- In the first few months after the release of Windows 95, there were many horror stories about difficult installations of MSN, and the tech support number is not toll-free.
- The MSN portion of the service is quite slow.
- You have to have Windows 95 to use this service.
- Microsoft's Web browser, Internet Explorer, disables other browsers you might have on your computer.
- Microsoft says it's working on versions of MSN for Windows NT and Mac clients, but hasn't set release dates yet. No version is planned for Windows 3.x.
- MSN doesn't let you use e-mail readers other than its own Microsoft Exchange, or news-readers other than MSN.
- You can't yet set up a home page on MSN. ■

INTERNET SERVICE PROVIDERS

Minda Sandler

If you're intent on spending a lot of time on the net, want the flexibility of being able to choose your access software, or want less hand-holding than you'll get from a commercial online service, choose to access the net through an Internet Service Provider (ISP).

With an ISP, you won't have to worry about anything getting in the way of you and the net, and for many people, that's a good thing. For those who want a bit more of a buffer between themselves and technology, or some guidance as they wander the black hole of cyberspace, the online service route may be a good way to go (see pages 26-27).

Using ISPs requires that you have certain software — WinSock if you're a Windows user or MacTCP if you have a Mac. And it will have to be configured properly before you're able to log on to your provider's Internet host and explore the net. One advantage of going the ISP route is that, often, you're able to choose the kind of mail, news, FTP, and Web software you like best. Much of this software is free and downloadable from the net.

PRICING RESEARCH

Prices for ISPs vary, and so do the services involved. One golden rule to guide you as you do some ISP research: Don't sign up for anything where you must pay more than \$20-\$30 a month for the account (this doesn't include, of course, hourly fees; you'll usually have to pay a dollar or two — or less! — an hour to be on the Internet). Also, be sure to find out about one-time account setup fees.

Before you start your search for the perfect ISP, talk to your friends, neighbors and relatives to hear some first-hand experiential information about what they're using. If you want a local ISP, look through the phone book.

If you have Web access, check out Yahoo!'s list of providers at http://www.yahoo.com/Business/Corporations/Internet_Access_Providers/, or

view the list of providers located at <http://www.celestine.com/pocia/index.html>. The ISPs are divided into free, nationwide, 800 toll-free service, and regional, for easy searchability.

BEFORE YOU SIGN UP

There are a number of questions you'll want to ask an ISP you're considering signing up with:

1 Can I set up a free guest account? This will let you do some trial-and-error checking to see how well things work, what kind of tech support and instructions you get, how often you get a busy signal when you try to connect, and how easy it is to set up and configure the software.

Try to sign up for several different trial accounts for comparative purposes before you take the plunge.

2 What kind of software will I need, and how can I get it? Will I be using a suite of software provided by the ISP, or will I have to choose my own? If I do have to get my own, does the ISP give me recommendations about where to find it and how much to pay for it?

3 Is there any sign-up or software activation fee?

4 How does the ISP support users? Is there a 24-hour tech support line? Is the number toll-free?

5 Does the ISP have points of presence (POPs) in areas where I plan to travel to? This is important if you're going to use your net access while you're on the road.

6 Does the ISP have and

support 28.8 kbps access?

Does it have and support ISDN connections? Is there any cost extra for using ISDN? These questions are important if speed of connection is important to you.

7 Is there full access via TCP/IP? This is important if you plan to access the net from a dial-up line at home and/or a network connection at the office.

8 Is there a choice between monthly and hourly fees? If so, take the one that's least costly, in case you decide to switch to another ISP somewhere down the road.

You can always change the payment plan to fit your usage patterns once you've been online for a while.

9 Does the ISP have HTTP servers on its systems? Can I link my directory of text and graphic files to them so I can set up my own Web site?

Also important: Is there a charge for storing your personal pages on the ISP's servers?

10 Does the ISP make list servers like majordomo and listserv available to me for use in creating a mailing list from my account? How will you be charged for this — a flat rate, or by each message exchanged? If you plan to run an active mailing list, look for an ISP that charges a flat rate.

11 Am I able to rent a dedicated line and my own Web server from the ISP? This would be important if your Web site or mailing list becomes popular. ■

A Look at Some National ISPs:

Netcom NetCruiser

Contact: 800 353 6600; download the NetCruiser software from Netcom's Web site (<http://www.netcom.com/netcom/software/cruzwin.html>).
Platform: Windows 3.1 and

MS DOS 5.0 or higher.
Pricing: One-time setup fee: \$25. Forty hours of prime-time access is \$19.95 per month (each additional hour is \$2.00); access during non-prime time hours is free.

PSINet's Pipeline USA

Contact: 800 827 7482; download Pipeline USA from the Web site (<http://www.usa.pipeline.com/info.html>).

Platform: IBM PCs or compatibles running Windows. **Pricing:** Monthly charge is \$19.95. **Five-Hour Option:** You pay \$5 for five hours, then \$1.50/hour thereafter.

Concentric Network

Contact: 517 895 0500; visit the Web site at <http://www.cris.com/>.
Platform: Windows, Mac
Pricing: **Beginner's Plan:** \$7.95/month (five free hours);

each additional hour is \$1.95. **Intermediate Plan:** \$19.95/month (20 free hours); each additional hour is \$1.50. **Unlimited Plan:** \$29.95/month for unlimited usage. **800-Number Plan:** 10/month (two free hours); each additional hour is \$5. **Direct Connect Plan:** \$10/month (unlimited usage).
Note: All prices listed here are subject to change.

BROWSER BONANZA

Crystal Waters

Netscape, Netscape, Netscape. This company makes the most popular browser in the world, and even if you've never even been on the net, you've probably heard the name — or bought the stock, or wish you'd bought the stock.

But there are many other companies that have published browsers, and whether you're simply curious or a net maniac, you'll probably find that each may offer something another one doesn't: speed, platform support, easier access. Or, maybe you just want to be the person on your block with the most browsers. Here's a brief rundown of a bunch of browsers available — it's far from being a complete list, but definitely includes the ones you've most seen or heard about.

Navigator 2.0

Netscape Communications
<http://www.netscape.com>

So why is this browser so cool, especially when its betas can cause crashes and heartbreak? It's almost as simple as what Mom used to say (and sometimes still does): Because I *said* so.

Well, nothing's really that simple. Despite beta bugs and past implied security problems, Navigator remains the top choice for browsing because of the number of extensions it supports.

While presentation doesn't improve the quality of information on a Web site, it does make for a more pleasant experience: aligned graphics (left, center, right), tables for information organization, text wrap, various font sizes, background colors and patterns, text colors, and other supported visual goodies. It's fast, intuitive, easy to learn, and 2.0's drag-and-drop bookmarks file make organization of those sites you want to access regularly a breeze.

America Online Browser

America Online
<http://www.aol.com>
800 827 6364

America Online was the second of the Big Three commercial online services to come out with a browser, and thankfully, it pro-

vides software for both the Macintosh and PC. However, its browser, while supporting such HTML tags as background colors and color text tags, still lacks in

performance. Even when accessing the Web via a T1 line, AOL's browser drags. The lack of a comprehensible status bar or icon always gives the feeling that nothing is happening except for a crash, even if that's not the case. On the plus side, though, AOL gives Web access availability to its now 4 million+ members.

NCSA Mosaic

National Center for Supercomputing Applications
<http://www.ncsa.uiuc.edu/SDG/Software/Mosaic/NCSAMosaicHome.html>

Mosaic, the first well-known graphical Web browser, was developed by the National Center

for Supercomputing Applications. Marc Andressen, the master of Netscape Navigator, was a developer of Mosaic before he headed off into commercial land. While its heyday has fallen way behind due to its lack of support of many Netscape HTML extensions, Mosaic is still a snazzy and dependable browser, and it's free

for the taking. Its most annoying "feature" is the way it loads a page — text first (which is a good thing), but then graphics pop up and move the text as they are loading, which can be annoying if you want to start reading while images are loading.

Lynx

University of Kansas

http://www.cc.ukans.edu/about_lynx/about_lynx.html

Sure, the Lynx browser is not one many of us outside the universities will ever use, but since you may have heard about it, we decided to include it in this list. Lynx is a text-based browser for Unix platforms, and the first hypertext browser ever developed. Being text-based, it doesn't provide all the glam and graphic effects touted by other browsers, but Lynx brought us the concept of hypertext — linking of a word or words to a related site that is accessible by a click. It's something that we all take for granted, whether in the online world or in software.

Prodigy

Prodigy Services Company
<http://www.prodigy.com/>

Prodigy was the first commercial online service out of the gate

with a Web browser that offers direct access to Web pages from within the service. While it's far from being slick or fast, it does offer Prodigy members low-cost access (especially under the service's 30/30 plan, for which members basically receive 30 "free" hours for a monthly charge of \$29.95). Prodigy software is available for free from the company. Call 800 PRODIGY and tell them what platform you'd like software for. Prodigy members can jump INTERNET; the service's browser software is available for download. At press time, only Windows-running members have the privilege of having a browser available.

Microsoft Internet Explorer 2.0

Microsoft Corporation
<http://www.microsoft.com>

Microsoft's answer to Netscape's Navigator, Internet Explorer 2.0,

is a slick browser that not only takes advantage of HTML 2.0 extensions, but also adds some proprietary extensions. So users

get some cool advantages: stationary backgrounds, inline video, background music, animations, and auto-scrolling text, all which make for some potentially jazzed-up pages. Be warned: Internet Explorer works only under Windows 95.

Spry Mosaic

CompuServe Information Services

<http://www.compuserve.com/>

Quarterdeck Mosaic

Quarterdeck Corporation, Inc.
<http://www.qdeck.com/>

I'm lumping these two together, even though they're from two different companies — it seems that any

company named Mosaic seems to sport the same features or lack thereof. Both cover the basics, but offer little as far as flash or pizzazz.

WebExplorer

IBM

<ftp://ftp.ibm.net/pub/WebExplorer/>

This, again, is probably a browser not too many of us will happen upon in our Internet ventures. WebExplorer from IBM is a browser for OS/2 Warp, and as far as we know, it's the only one available.

eWorld Browser

Apple Computer

<http://www.eworld.com/>

Ah, eWorld, the little Mac online service that could. Though it has far fewer members than the Big Three, eWorld has an impressive selection of proprietary content. While its browser is the same as AOL's, for some reason, it gives a more satisfactory ride. No, eWorld's browser doesn't whip along, but it's definitely faster than its AOL counterpart. ■

FIRST 10 WEB SITES TO VISIT

Crystal Waters

It's hard to decide on what's best out of the millions of pages on the World Wide Web. But we've tried to come up with a list of suggestions that should get you started hyperlinking around the globe in an educational and entertaining fashion. Get clicking!

Boba World

<http://gagme.www.com/~boba/bobaworld.html>

If anyone on the Internet can be considered a veteran, it's Bob Allison, founder and keeper of Boba World. This place is info- and link-land galore. It includes such treasures as Uncle Bob's Kid's Page, The Michael Jordan Page, Uncle Bob's Christmas Page, Tips for Web Spinners, The Web Master's Page, The Beatles, The Spider's Web (where you'll find Spider's Pick of the Day — always a popular, "cool" site), The Scarecrow's WWW Link (offering the most amazing ASCII art — or art created with text characters — possible), plus suggestions of recommended newsgroups. And, there's more, more, more.

The Enhanced for Netscape Hall of Shame

http://www.meat.com/netscape_hos.html

Whether you just want to be entertained by this site's links, or you're a Web page creator who wants to learn what *not* to do on your pages, this site is a treat. It doesn't concentrate on just ugly stuff, though. You'll also find categories such as "The Most Painful" and "Dizzy." Web weavers will find "Texture Land" a great source of tons of choices of background textures for pages (although some are pretty eye-shattering).

Cool Site of the Day

<http://cool.infi.net/>

Hey, every site wants to be considered "Cool Site of the Day" by InfiNet — it's a sure way to get a bazillion hits from surfers. There's also a "Categorically Cool" page — dedicated to bringing us cool stuff in the categories of knowledge, art, home pages, bizarre, and commercial sites — plus an archive of past cool sites. Be prepared, though, to have a hard time getting onto the site that's chosen that day — everyone else is trying to get there, too.

Remembering Nagasaki

<http://www.exploratorium.edu/nagasaki/>

Remembering Nagasaki, hosted on The Exploratorium's site (located in the Palace of Fine Arts in San Francisco), is a quietly elegant photographic journey and discussion of issues on the 50th anniversary of the bombing of Nagasaki. Its photographic journal, "Nagasaki Journey — The Photographs of Yosuke Yamahata," is both beautiful and haunting. Images and words written on the day after the bombing poignantly underscore the tragedy. This is digital storytelling at its best.

SALON

<http://www.salon1999.com/>

Sponsored in part by Apple Computer, Borders Books, and Adobe Systems, SALON is a new online journal of "books, arts, and ideas." There are book excerpts, interviews, and discussions. The premiere issue features an interview with Amy Tan discussing her third novel, *The*

Hundred Secret Senses; The Kiss Patrol by Armistead Maupin (reprinted from Dog People: Writers and Artists on Canine Companionship, published by Artisan); a roundtable discussion on race; and a selection of departments, columns, comics, and reviews (movie, TV, music, and multimedia). Put this one up on your laptop's screen when you leave it on the coffee table.

c|net online

<http://www.cnet.com>

c|net claims to be the fastest growing site on the Web, and that's not too hard to believe. Its more than 265,000 registered members are treated to daily news and features on such topics as "Build Your Own Web Site" and "Finding the Fastest Access Providers." The site includes tons of reviews of software and hardware. It also sports a huge shareware download area called Virtual Software Library. Plus, it lets you keep track of what's on the weekly "c|net television" show, chat with other members, listen to RealAudio broadcasts of c|net Radio, and much more. A great resource for real-life computing.

TV Net

<http://www.tvnet.com/TVnet.html>

O.K., so one of the purposes of becoming an online guru is to slowly wean ourselves away from television. But TV Net is just so chock-ablock full of everything from links to "X-Files" forums to national television listings to show ratings to a listing of TV professionals' e-mail addresses, and on and on and on, that it's hard to resist. Another great TV site is TV Bytes (<http://www.parkhere.com/tvbytes/>). It's a resource for hundreds of television show and commercial theme songs.

Useless Pages

<http://primus.com/staff/paulp/useless.html>

The master of this page, Paul Phillips, explains its origins by noting that "the discovery that someone had typed in his entire 30K CD collection for WWW consumption prompted me to generate the Useless Pages page." Since its inception, the Useless Pages site has had more than one million hits. Phillips continually updates the useless page archive to bring us links to total wastes of time, along with his pithy commentary.

Netscape

<http://www.netscape.com>

Netscape's Navigator browser software is estimated to be used by 75 to 90 percent of the Web-cruising population. Whether you use the Netscape browser or not, the site is a place to find resources on interesting sites to visit, industry news and developments, Web creation resources, and more. It includes links to net search engines, net directories, and, of course, hosts its own very popular "What's Cool?" area.

Mr. Showbiz

<http://web3.starwave.com/showbiz/>

A service of Starwave, Mr. Showbiz is a daily-fed Web site dedicated to entertainment — not only in what it covers, but in its manner of coverage, as well. Join in on celebrity chats, read interviews with supermodels, rap about politics, read tabloid headlines from around the world ("MOVE YOUR BUTTA FUOCO OUTTA HERE!"), and more. ■

WORTHWHILE WEB RESOURCES

Crystal Waters

Whether you want information on how to navigate the Web or on how to do heavy-duty design of your own Web site, there are tons of online resources to help you out. We've gathered together a list of recommended sites that can aid you in your cyber journeys.

World Wide Web FAQ

http://sunsite.unc.edu:80/boutell/faq/www_faq.html

Got questions about the Web? Well, the World Wide Web FAQ (Frequently Asked Questions), written by Thomas Boutell, has the answers. Basics such as "What is the Web?" and "Where do I go to get browsers?" are covered. There's also server setup info, Web term definitions, newsgroups directions, and much more. This is a great place for both beginners and more advanced net users.

Global Village's Internet Tour

<http://www.globalcenter.net/gcweb/tour.html>

Found in the corporate site of Global Village (a popular modem manufacturer), the Internet Tour takes you on an interactive tour

of the Global Village server ("so you can't get lost"), then launches you on to other sites. The tour escorts you through some typical activities a new Webbie might like to do, such as checking the stock market, researching software, hiring a graphic designer, and finding a government document.

ILC Glossary of Internet Terms

<http://www.matisse.net/files/glossary.html>

Want to know what ADN means, or where BITNET got its name?

Then the ILC Glossary of Internet Terms is a good first stop on the way to Internet enlighten-

ment. From tech terms like FDDI (Fiber-Distributed Data Interface) to explanations of ever-popular acronyms such as IMHO (In My Humble Opinion), the Glossary will give you plenty of terms to throw around next time you want to impress your local MIS person or fellow party-goers.

The Unofficial Internet Book List

<ftp://rtfm.mit.edu/pub/usenet/news.answers/internet-services/book-list>

This twice-monthly updated, FTP-accessible list gives a comprehensive round-up of new books on the Internet. Save some time at the bookstore by perusing the prices, ISBNs, and usually a little write-up about the book itself. There's also contact information, such as author and/or publisher e-mail addresses, and Web sites where you can find out more.

The Websurfer's Handbook

<http://www.galcit.caltech.edu/~ta/handbook.html>

O.K., so this site is kind of stupid, but it's fun. Home of the "Web-to-English Dictionary," the Websurfer's Handbook gives such definitions as "Hotpotato *n.* the English pronunciation of *http://*"

and "sink back *v.* To retrace steps required to get to a favorite site when you accidentally toast your hotlist. Example: I crashed before I could save the URL, so I had to sink back to NCSA What's New." Best of all, you can add your own funky definitions to the list.

Thalia's guide for WWW-providers

<http://www.sci.kun.nl/thalia/guide/index.html>

Meant for people starting out in the Web-making world, Thalia's Guide includes tips for designers, users, and those who maintain Web sites.

There are links to just about everything you could

want — from HTML converters to icon libraries to tips on creating a great Web site.

Lynda's Homegurrrl Page

<http://www.earthlink.net/~lyndaw/>

Our very own Web design-orama wonder Webstress Lynda Weinman has gathered up what must be the best collection of

Web design tips and tricks information available.

Here, you'll find links to image map secrets, CGI resources, hexadecimal churners, and more (including a link to my page!).

Netscape Corporation

http://www.netscape.com/http://home.netscape.com/assist/net_sites/html_extensions.html

If you're going to be designing Web pages, then it's a must that you put the Netscape site on your bookmarks list. Every HTML extension supported by Netscape's Navigator is here — demoed and explained. Or, do what I do: View the source code in Netscape's example pages and rework it to your liking for use on your own page.

A Beginner's Guide to HTML

<http://www.ncsa.uiuc.edu/demoweb/html-primer.html>

NCSA has excelled at putting together the definitive primer on HTMLing, from defining tags to creating in-line images to troubleshooting. ■

searching

for Sites

Even the most experienced Web users need help finding stuff among the millions of sites now available for our perusal. Here, we profile some of the most popular search engines.

Yahoo!

<http://www.yahoo.com/>

Yahoo! is probably the most well-known of all the search engines out there. It's easily browsable or searchable by keywords.

Lycos

<http://www.lycos.com>

Lycos is easily searchable by keywords, and provides rated matches to each word — listing sites that match all keywords, then sites with one or more keywords. Lycos is also browsable.

InfoSeek

<http://www2.infoseek.com>

InfoSeek offers a paid service where you get an extensive search for a monthly fee. It's also announced a free service called InfoSeek Guide (<http://guide.infoseek.com>).

WebCrawler

<http://webcrawler.com/>

WebCrawler lets you type in your keywords, choose whether you want the engine to find sites with "any" or "all" of the keywords mentioned, and specify how many of the results you'd like displayed.

WWWorm

<http://www.cs.colorado.edu/home/mcbryan/WWWorm.html>

While it lacks the browsability of Lycos and Yahoo!, WWWorm does have a fast and simple interface. Search by URL or title, match all or any keyword, and choose how many matches you wish it to find. ■

HELPER APPS:

GETTING THE MOST OUT OF YOUR BROWSER

Crystal Waters

As advanced and fancy as some browsers have become, it's still impossible for them to do everything. For example, most popular browsers have the ability to display common types of images such as GIFs and JPEGs, but some don't. Browsers generally also don't know how to play sounds (and we all know that going to a TV theme song site and downloading sounds is a crucial part of net life). However, helper applications, or apps, are programs that your browser can "call" when it needs help in running a video file or sound, or showing an image.

Most of the helper apps are shareware or freeware that are available on a majority of the commercial services, in software/shareware archives, or on shareware/freeware distribution disks, such as our *netPOWER* CD-ROM, or discs that come with Internet how-to books.

As we mentioned in a previous article on setting up helper applications (see *The Net*, Sept. 95, pages 76-79), there's a really easy way to tell when you're in need of a particular helper application.

If you find yourself suddenly unable to view a sound or image whose link you've clicked, your browser will

notify you that it's not set up to deal with a file of this type. In other words, that's a file for which you need a helper application.

Typical image and sound file types in need of a helper app are JPEG, GIF, TIFF, MPEG video, QuickTime video, and PDF (Adobe's Portable Document Format). Images most commonly in need of a helper app are less usual formats, like video, PDF, and TIFF images. The common audio file types requiring apps are AU, AIFF, WAV, RealAudio, and MPEG audio. Luckily, one helper app each for video, sound, and images will usually take care of many of the image and sound formats you'll encounter.

Below, you'll find some suggested helper applications for playing certain formats, as well as some suggested places to find the software if you're unable to read our CD-ROM.

APPS & THE FILES THEY HELP WITH:

Image/Video Apps →	Key File Formats Supported
MPEG Player (Macintosh)	MPEG video
QuickTime Player for Windows	QuickTime video
LVView (Windows)	JPEG, GIF
Acrobat Reader (Macintosh)	PDF (portable document format)
Sparkle (Mac Sys. 7.5 or later)	MPEG video, QuickTime video
JPEGView (Macintosh)	JPEG, JIFF, GIF, PICT, LZW-compressed TIFF
GraphicConverter (Macintosh)	PICT, TIFF, JPEG, JIFF, GIF
Sound Apps →	Key File Formats Supported
WPlany (Windows)	AU, AIFF, VOC, WAV
WHAM (Windows)	WAV, VOC, IFF, AIFF, AU, and RAW
SoundApp (Windows)	AIFF, AIFF-C, MooV, AU, WAV
SoundMachine (Macintosh)	AU, AIFF, AIFF
MPEG Audio (Macintosh)	MPEG audio
RealAudio Player (Macintosh, Windows)	RealAudio (real-time audio broadcast on the net)
StreamWorks (Macintosh, Windows)	StreamWorks (real-time audio and video broadcast on the net)

WHERE TO FIND HELPERS:

Windows

- <ftp://ftp.cica.indiana.edu>
- <ftp://ftp.ncsa.uiuc.edu/Mosaic/Windows/>
- ftp://ftp.support.apple.com/pub/apple_sw_updates (for QuickTime for Windows)

If you thought all online services were the same, think again. For just \$9.95 a month, CompuServe gives you Internet access and more detailed information on the subjects you're interested in than any other online service. Because CompuServe has the strongest relationship with the best sources for news, sports and entertainment, you're always plugged in to *Fortune*, *Comedy Central* and *Entrepreneur*, just to name a few. Don't be left only half-informed ever again.

STOPPING THE PRESSES: REINVENTING THE NEWSPAPER IN THE DIGITAL AGE

Stevan Alburty

"The newspapers! Sir, they are the most villainous, licentious, abominable, infernal — Not that I ever read them! No, I make it a rule never to look into a newspaper."

— Act I, Scene 2,
"The Critic" by Richard Sheridan

It is the industry that refuses to die.

Faced with hemorrhaging circulation and spiraling costs, America's newspaper industry is engaged in a battle of survival as dramatic as many of its own headlines. The battle is not new. Thirty years ago, Carl Lindstrom predicted in *The Fading American Newspaper* that "it is entirely possible in the not-so-remote future that [the daily newspaper] will go the way of the street-

ed, the Age of Information, and the appetite for that information is fueling much of the dramatic growth of digital communications. The desire for news has not diminished, but ink on paper seems increasingly cumbersome and inefficient as a delivery vehicle for the news.

Newspapers across the country are rapidly responding to the challenge by developing supplemental products designed solely for electronic consump-

faces illuminated only by the feeble glow of a computer screen.

NEWSPAPERS THAT FETCH THEMSELVES

Hundreds of newspapers now offer a Web-based derivation of their traditional paper product. A list of them is conveniently published on Yahoo!

(<http://www.yahoo.com/news>).

But there is no point in merely replicating a newspaper's content online. It brings no significant added benefit to the reader. And a computer cannot compete with a traditional newspaper as a display mechanism — you can't fold a computer in half and flip through it in the back of a taxi, and it is difficult, if not outright dangerous, to fill out the crossword puzzle on a computer while you're soaking in the bathtub. The true value of online newspapers shines forth when the content they contain is somehow personalized for your benefit through the power of a computer.

As befits its location and stature in the heart of the Silicon Valley, the *San Jose Mercury News* (<http://www.sjmercury.com/>) has been a leader in redefining the newspaper for the electronic era. Its polished and professional Web site offers non-subscribers the headlines and

All The News That's Fit To Mail: News Services that Deliver Articles Via Electronic Mail:

(Prices quoted are "suggested retail prices" at press time and do not reflect special offers or discounts to charter members.)

Farcast

<http://www.farcast.com/>
\$39.95 per month.

Sources: 5,000 stories daily AP, Business Wire, PR Newswire, and Newsbytes, plus stock quotes. No browsable archive, but searchable via e-mail requests. See Farcast in action by sending e-mail to demo@farcast.mcom.

HeadsUp

gopher@gopher.enews.com
/11/news_services/headsup
\$29.95 per month; includes five full-text articles per month. Additional articles \$2.97 each.

Caution: Can get expensive. Sources: 50,000 stories daily. Hundreds of magazines, newsletters, and newspapers from the U.S., Canada, and the U.K.

NewsHound

<http://www.sjmercury.com/hound.htm>
\$9.95 per month.

Sources: 2,000 stories daily. *San Jose Mercury News*, Knight-Ridder/Tribune News Service, the Associated Press, Scripps-Howard News Service, Kyodo News Service, Business Wire, PR Newswire. Access to archives extra through separate subscription service.

The San Jose Mercury News' Mercury Center Web site (<http://www.sjmercury.com/>) has helped to redefine the newspaper for the electronic era.

car." In the last 50 years, the number of U.S. households has tripled, yet the ratio of newspaper circulation to households has dropped by half.

Threatened first by the immediacy of television, newspapers are now facing fresh competition from a vigorous new foe: the world of online services and the Internet. This is, as we are frequently remind-

tion, products with increased functionality that add real value to their readers' lives.

Those of us who are "news junkies," those unfortunate fiends forced to prowl newsstands late at night in our insatiable lust for greater and deeper information highs, can now satisfy our demon habit in the privacy of our own homes, our bleary-eyed

top stories of the day, plus searchable classifieds. Subscribers to the Web site have full access to the entire paper, and can search the archives. Since the San Jose Mercury News has some of the best tech-

The Mercury News's NewsHound service delivers stories to you around the clock.

nology reporting in the country, the Mercury Center Web site is an invaluable resource for hard-core information and just plain gossip about the computer industry.

But it is the *Mercury*

News's NewsHound service that really excels. Rather than wait for you to come to the news, the news comes and finds you. NewsHound actively delivers stories to you 24 hours a day based on lists of keywords you maintain. The paper's mainframe scans articles from its own paper, as well as the Knight-Ridder/Tribune News Service, the Associated Press, Business Wire, and the PR Wire — more than 2,000 articles daily. As it finds matches, it sends them out over the Internet to your e-mail account. Since the stories are selected and mailed to you almost immediately once they are filed by the editors, NewsHound gives you the sense you'd get if you were standing in the newsroom watching the stories come over the wire.

HeadsUp from Individual, Inc. is another e-mail based service, but it claims a daily bounty of more than 15,000 articles. Based on a keyword list you provide, HeadsUp mails you a "digest" each day with a list of headlines and a brief abstract of each story that meets your criteria. Full-text stories are only delivered on demand; you have to send back an e-mail containing the story's I.D. number. Unlike NewsHound, which dribbles out news throughout the day, HeadsUp delivers one digest per morning, a frequency some users find less invasive than NewsHound's staggered delivery, but which true information aficionados may find too infrequent to satisfy their cravings.

Farcast uses a similar "digest and retrieval"

metaphor, but spices up the interaction with its daily database of 5,000 articles by communicating with users through e-mail "droids" — software robots that deliver Farcast's stories to your e-mail address with cheery (for a robot) greetings.

Which one of these services to select comes down to the simple issue of price (see sidebar, page 34). There's also the quality and quantity of news that each service places at your disposal. All three of them cover the "Holy Trinity" (the Associated Press,

Farcast offers a daily database of 5,000 articles deliverable via e-mail.

Business Wire, and PR Wire), but they vary wildly in the additional sources they offer, and it's frequently those less-traditional sources that contain the nuggets of news and opinion that can be used so effectively in the blood sport of "informational one-upsmanship" played around America's corporate water-coolers.

HAVE YOUR AGENT CALL MY AGENT

Every few years, the technology industry embraces a new buzzword and, like a puppy with a sock in its mouth, refuses to let it go. "Multimedia" enjoyed an obnoxiously ubiquitous popularity for almost a decade, until Nicholas Negroponte, the grand vizier of MIT's Media Lab and the father of the term itself, declared the phrase passé.

ALL THE NEWS THAT'S FIT TO BROWSE

Here are a few of the best newspapers and news services that offer passive viewing and/or searchable archives. For a complete listing, browse on over to <http://www.yahoo.com/news>.

Dagbladet

<http://www.telepost.no/dagbl@det.no/>

Lest we forget how international the Web really is. Totally incomprehensible unless you read Norwegian, but it sure do look purty.

NewsPage

<http://www.newspage.com/>

Costs \$6.90 per month, plus extra fees for what NewsPage calls stories from "pay per view" sources. Caution: Can get expensive. Another service of Individual, Inc., it uses the same sources as HeadsUp, but the stories are archived, searchable, and pre-sorted into industry categories.

NandoNet

<http://www.nando.net/>

From the folks at the Raleigh News & Observer. One look at this, and you'll wonder whether this can really be from the same state that gave us Jesse Helms. The best regional electronic newspaper in the country. These people get it. Top national and local stories, plus Dick Tracy, Brenda Starr,

and Gasoline Alley. Don't miss "Pete & Shirley: The Great Tar Heel Novel," a serial in 18 parts written by 17 North Carolina novelists. A variety of free and subscription services.

The New York Times

keyword "times" on America Online

No additional charge beyond regular AOL usage fees. Current day's top stories, plus business and Tuesday "Science Times" section. Searchable book, movie, theater, and restaurant reviews, as well as classifieds.

By the time you read this, the *Times* will have released its new Web edition (<http://www.nytimes.com/>).

Yahoo

<http://www.yahoo.com/headlines/>

O.K., so Yahoo has the addresses of just about every Web site on the planet. It also provides newsteeds from Reuters for free. That's free, as in no cost. It's the best news deal on the Internet.

The cognoscenti are now tossing the word "agent" around like linguistic linguini — every press release from a software company seems to trumpet its product's "agent technology." Simply put, a software

headline or first paragraph or is mentioned 20 times in the article, it had better send you the story, whereas if *hog jowls* is mentioned once and only once, and is in the last paragraph, it may choose to decline to send the story your way.

Unlike NewsHound and Farcast, which depend on user-generated keywords, Agents, Inc. uses "collaborative filtering" to ensure you won't miss juicy news.

"agent" performs a specific task independently, letting a user move on to other work. (Setting your computer's reminder alarm to ring at a set time is a crude example of agent technology.) But, like those other agents who run up tabs at the Polo Lounge, there's a big difference between an agent who can book you on the "Letterman" show and one who gets you into the chorus of "The Music Man" at a dinner theater in Wyoming. Some agents are just more powerful than others.

NewsHound, HeadsUp, and Farcast all utilize some form

of agent technology to sift through and seek out the stories you want by continually matching their content against your keyword list. HeadsUp uses software algorithms written 20 years ago at Cornell University; the algorithms rank stories by relevancy. For example, if you have asked HeadsUp to send you articles about *hog jowls*, the software agent may decide that if the phrase *hog jowls* is in a story's

A new and even more sophisticated agent technology is just now coming to market. It promises to radically change the way we access information.

Agents, Inc. is a Boston startup founded by graduates of MIT's Media Lab, where the concepts and code for what Agents, Inc. is calling "collaborative filtering" were first developed.

"One of the difficulties with the news services on the Internet today is that you have to keep adapting them," says Pattie Maes, an associate professor at the

Media Lab and one of the founders of Agents, Inc. Services like NewsHound and Farcast, which depend on keyword lists set up by the user, are only as good as the care with which those lists are developed and maintained. You may set up selection criteria based on your current fascination, for example, for *Bosnia* or *global warming*. "But people's interests in news change," notes Maes. If you do not have your

agent/filter set to catch stories on *Java*, for example, you might miss something juicy.

Collaborative filtering works by automatically looking at what other users find interesting to help you discover information that you, too, might find intriguing but might not have otherwise encountered. If you like *Beethoven*, for example, a collaborative filtering system might look at what other Beethoven fans are interested in, then make some suggestions about other music you might enjoy. Agents, Inc.'s Web site (<http://www.agents-inc.com>) uses just such a communal music "referral" system to demonstrate its product's logic.

"The community aspect is extremely important in news," says Maes. Finding articles that interest you is easy. Finding the articles that interest every-

one else is more difficult, but is critical if what you *really* need to know is what your peers and competitors also know. A news service that's based on the model of a complex, adaptive system might aggregate the reading habits of a cross-section of users with similar interests and begin to select and sort the presentation of information based on collective, rather than individual, interest.

EXTRA! EXTRA! READ ALL ABOUT ME!

There is a danger in this reductive process, this self-selection of news, however, and that is the degree to which it shuts out any view of the world that is not our own. With the fragmentation of cable television, the proliferation of magazines that are highly targeted to smaller and smaller demographic groups, and with the

First on the Block:

ClariNet

The first and, with more than one million subscribers, the largest electronic newspaper on the Internet is ClariNet (<http://www.clarinet.com>). Rather than sell its news to individual users, ClariNet markets its

service to local Internet access providers, which then

make the news available to their members by placing the content in the familiar format of Usenet newsgroups. If your access provider carries ClariNet, launch your Usenet newsgroup reader and look for Usenet newsgroups that begin with the prefix "clari," such as "clari.biz.industry." Sources include the AP, Reuters, SportsTicker, and a variety of syndicated features, including the impeccable advice of Miss Manners, the *Annals of Improbable Research*, the writing of Joe Bob Briggs (drive-in movie critic), and the comic strip *Doonesbury*.

Internet and online services providing even greater opportunities for pursuing individual interests, Americans may be becoming more and more informationally introverted.

Newspapers, especially those of tremendous editorial stature, such as the *New York Times* and the *Washington Post*, perform a valuable public service: They give the news an editorial voice. As the editors select the stories that fill the front pages and the editorial sections of their newspapers, they make conscious decisions about the placement of stories and photos, or the size of headlines, based not just on our desire to know, but on our need to know as well.

FOLDING THE PAPER

The speed and pervasiveness with which the World Wide Web has come to dominate the emerging electronic news business were demonstrated dramatically by the announcement late last year that publishing conglomerate Knight-Ridder was closing its futuristic Information Design Laboratory in Boulder, CO. Abandoning its prototypical development of hand-held, wireless, flat-screen displays that it had envisioned as the "newspaper-of-the-future," Knight-Ridder has decided to focus on its Internet efforts instead.

Industries do not change without misfortunes; eras do not pass without their ironies.

In 1898, the famed Western artist Frederic Remington was sent to Cuba by the powerful

Hearst newspaper network to sketch the insurgents fighting for independence from Spain. After growing bored drawing burning sugar-cane fields, Remington cabled home to publisher William Randolph Hearst, "Everything quiet, no trou-

ble here. There will be no war. I wish to return." Hearst wired back: "Please remain. You furnish the pictures and I'll furnish the war."

There may have been no greater name in the newspaper business than William Randolph Hearst.

Through the power of his paper and his own personal influence, it is claimed he single-handedly manipulated America's entrance into the Spanish-American War, and secured Franklin Delano Roosevelt's nomination to the Presidency.

In December 1994, Hearst's grandson, William Randolph Hearst III, announced that he would step down as publisher of the *San Francisco Examiner*, the crown jewel of his grandfather's empire, to join a venture capital firm specializing in new media.

Ink fades; newsprint grows bleached and brittle with age. The news rolls on. ■

ROLLING YOUR OWN

Crayon

Jeffrey Ray Boulter admits he's cheap. And lazy. "Getting a subscription to a 'real' newspaper would require me to walk downhill (and then back uphill) everyday to get a paper," he notes. A student at Bucknell University, Jeff has created Crayon, a newspaper you design yourself (<http://www.eg.bucknell.edu/~boulter/crayon>).

After thinking up a clever name for your newspaper, you then click on a series of check boxes that identify the sources you would like to include in your personalized paper. The lengthy list of choices include just about every valuable and foolish free news source available on the Internet, including *TIME* magazine's Daily News Summary, *USA Today's* Nationline, *The Daily Yomiuri* (Japan), David Letterman's "Top Ten List," "News of the Weird," and "Cool Jargon of the Day."

All of the links pointing to these sites are then compiled for you into a single Web page, which you then save locally on your hard drive. Every morning (or whenever the fancy strikes you), you merely open this local HTML file from within your browser, and presto! — you now have your own personalized newspaper displaying all of your favorite news sources.

PINpaper

BBN Planet in Cambridge, MA, one of the biggest providers of Internet services to corporate America, is releasing a commercial product that uses concepts similar to Crayon (<http://www.pin.bbn.com/>).

Called PINpaper, BBN's offering employs software agents that comb a variety of free and commercial information services and create a customized newsletter specifically tailored to each user's interests. This isn't a news service; it's a publishing system. PINpaper is server-based technology that can search and then reformulate external news — and even internal corporate data — to deliver personalized information to the desktop.

Fishwrap

For three years, freshmen at MIT have relied on Fishwrap, the Cambridge college's own personalized newspaper, to keep them informed of campus events and the world around them. (Why "Fishwrap"? Because, as any crusty newspaper editor will tell you, "Yesterday's news wraps today's fish.")

"Fishwrap" uses a profile of a student's cultural, societal, and even geographic interests (like the hometown she or he left behind) to assemble a personalized paper. The first page of the paper is self-generated by the action of the reader community itself — the ranking and appearance of stories shifts based on the number of people who access each article.

You need to be a registered student at MIT to access the full edition, but a few public pages may be viewed at <http://fishwrap.mit.edu/>. The far more interesting Web page is to be found at <http://fishwrap-docs.media.mit.edu/docs/dev/CNGlue/cnglue.html>. There, the founders of Fishwrap — Pascal R. Chesnais, Matthew J. Mucklo, and Jonathan A. Sheena from MIT — have published a paper that exhaustively explains the theories and technologies behind this futuristic publication.

POLITICKING ON THE NET

Lauren Guzak

In Presidential election years, March is the month when the freshly thawed lawns of America sprout politicians' yard signs like a bloom of wild mushrooms. And, like mushrooms, it's often difficult to determine the noxiousness of a politician until it's too late.

This year, though, is pregnant with the anticipation of a more informed electorate, as millions of Americans turn to the Internet as their new source of (and venue for expression about) the upcoming November elections. Some experts, like researcher/campaign consultant Daniel Junas, think that the Internet "assembles what's already known more than it pushes the boundaries of information." Others see 1996 as just a preview of what's to come in 2000. Still, a

plethora of election-centric Web sites, newsgroups, and discussion forums — from the hyperbolic to the understated — signal widespread approbation of this exploding medium as the ultimate one-stop resource for voters.

ONLINE PRESIDENTIAL PERSONA

So it is that President Clinton has become the first President with a home page — Welcome to the White House at [http://](http://www.whitehouse.gov/)

www.whitehouse.gov/.

Still, this classy page lacks anything smacking of campaigning. For the "elect Clinton/Gore in '96" stuff, you have to go to a fan's "unofficial" site — Clinton, Yes! at <http://www.av.qnet.com/~yes/>. It has all the fixins' — lists of his accomplishments, personal history, slams of Clinton's opponents, etc.

And Clinton's many political opponents, who traditionally shopped for voters via print, television, and radio, are now also hiring

consultants like the firm of Jamie Langius and Associates (<http://www.berkeleyic.com:80/consulo/>) to handle their online personas. All the major Presidential campaigns have established sites on the Web, replete with

Republicans' Web Central is a place to get the lowdown on GOP Presidential politics.

Compare and contrast: On top is the Unofficial Bob Dole site, in the middle is the Official Dole Page, on the bottom is the Anti-Official Dole site.

press releases, news clips, position papers, and opportunities for direct participation (see below for a list of candidates' sites). And some of those who have taken rain checks, like former Vice President Dan

Quayle (<http://a1.com/ice/quayle/index.html>), have nonetheless taken up residence on the Web, perhaps biding time for some future bid for high office.

Even the out-on-the-fringe Democratic candidates have established Web sites. These include pseudo-economist Lyndon LaRouche (<http://www.clark.net/larouche/welcome.html>), the I'm-not-afraid-to-call-myself-a-

Little-known Communist Party candidate for President Bruce Daniels has a spiffy Web site.

liberal's liberal Bruce Daniels (<http://www.daniels.winnipeg.mb.ca/>), and humorist Pat Paulsen (<http://www.amdest.com/Pat/pat.html>), who has been running for the Presidency in every election since 1968.

The campaign sites are using surveys and Web logging tools, like those being developed by Nielsen Interactive Services (<http://www.nielsenmedia.com/>), for political marketing. These tools have the added benefit of making people feel that their opinions are being accounted for.

Webmasters and mistresses are in high demand as politicians, think tanks, and special interest organizations look to concoct a slice of online perfection — a little something to win over the hearts and minds

of the millions of potential voters who might happen by.

As Robert Feldtman of the Republican's Web Central site (<http://republicans.vt.com/>) rhetorically asks: "Who is more likely to vote? The homeless bum on the corner, or a computer owner with a job?"

Our elected officials and their wannabe counterparts obviously think the same.

WHO'S FOR REAL?

The enormity of the Web and the relative ease of creating Web sites make posting a candidacy online problematic. Teeming with unofficial sites from the serious to the roasting, the Web challenges the casual passerby to locate the certifiably authentic home page of a specific candidate. Just running a general query in Lycos (<http://www.lycos.com>) using the key words "Phil Gramm for President," for instance, will get you a few pages worth of sites to weed through.

At one point early on in the Presidential race, people who went to the Web in search of a site for the Republican front-runner, Senate Majority Leader Bob Dole, could only find unofficial sites.

Two sites — the pro-Dole Unofficial Bob Dole Home Page (<http://homepage.seas.upenn.edu/~lapple/dole/bob.html>) and the decidedly anti-Dole Bob Dole for President (<http://www.dole96.org/>)

Unofficial sites

— were both up and running before the Kansas Senator's own version. To make sure that people knew which site had Dole's personal seal of approval, the campaign titled its own the Official Dole for President WWW Site (<http://www.dole96.com/>).

At this official site, Dole enthusiasts can get free bumper stickers and download screen savers, wallpapers, and desktop patterns (your choice of a photo assortment, or of Dole's schnauzer, Leader). There's also a nifty utility that lets you personalize a Dole postcard, then send it to a friend.

Though the pack of high-profile Republican candidates lag far behind Dole in the current polls, they remain largely undeterred at the time of this writing, and are prime subjects for Web pages created by supporters and naysayers alike.

To help determine what's real and what isn't, your best resources are those sites that serve as election guides. Two of the most useful are Project Vote Smart (<http://www.vote-smart.org/>) and Campaign '96 (<http://pathfinder.com/@fHFGF2FxFwIAQKRI/pathfinder/politics/1996/index.html>), both of which include candidates' bios and plenty of links to get you started and keep you busy.

Another good resource is the Countdown '96

Alan Keyes Network Home Page

Home Page (<http://www.comeback.com/countdown/>).

If non-partisanship isn't your thing, try the Information Headquarters for the Republican Primary (<http://www.umar.edu/~sears/primary/main.html>), or a Democrat's Source Page (<http://www.wp.com/lookn2it/home.html>).

SLAM SITES

Another phenomenon of Presidential-related Webomania: the slam site. Even those Republicans whose candidacies have been nothing more than mere speculation have been the subject of some serious razzing. Take the case of

Two of the funnier slam-the-candidates sites are the General Colin Powell '96 and the Bill Clinton — President '96 pages.

the former hope of the Republican party, General Colin Powell. This popular figure is skewered at the General Colin Powell '96 site (<http://www.powell96.org/>), which includes a strategic war map for his takeover of the country. In fact, the creators of the Powell site are single-handedly responsible for a suite of farcical slam-sites that includes Buchanan For President! (<http://www.buchanan96.org/>), The Republican Central Committee (<http://www.republicans.org/>), and Dan Quayle For President! (<http://www.quayle96.org/>), Bill Clinton — President '96 (<http://www.clinton96.org/>),

among others. These sites are less substance than satire, and there can be some serious panning. Such is the case with the Buchanan site, where the photograph of the ultra-conservative host of "Crossfire" is placed in an Americana graphic, itself laid atop a backdrop of quilted swastika wallpaper.

THIRD PARTIES

Ross Perot, Colin Powell, and Bill Bradley may be heralded as possible third-party candidates, but they don't offer a real divergence from the Republicans and Democrats. Ersatz third parties, which do, have also staked out territory on the Web, having finally found a medium that offers a more — but by no means completely — level playing ground. Parties of substance include the Communists (<http://www.tiac.net/users/brownh/cp-usa/cp-usa.html>), Greens (<http://www.rahul.net/greens/>), Socialists (<http://sunsite.unc.edu/spc/index.html>), and Libertarians (<http://www.lp.org/lp/lp.html>). The party to keep an eye on this year is the Greens, with its star-consumer-advocate-turned-presidential candidate, Ralph Nader.

FIRST PRIMARIES

Winter's just barely over, yet America is already fixated on next November. March not only ushers in Spring, but a slew of primaries. So, get online and watch as the race for the presidency unfolds before you, on your computer. ■

Pros and Cons of a Web-Based Democracy

Technological advances in communication are set to transform institutions and models of public participation in government. The White House has been active in projects to develop wide-area public collaboration systems, like that used in Vice President Al Gore's Electronic Open Meeting on the National Performance Review (<http://www.npr.gov/OpenMeet/openmeet.html>). The experimental system supported a large online meeting; more than 4,000 people participated in policy planning. They discussed, evaluated, and critiqued recommendations by linking their comments to points in the evolving policy hypertext.

But despite the rosy optimism that the net can serve as a means to create a more vocal and participatory constituency, a debate is raging over the fact that online access is still very much based on class, education, race, and gender. The Center for Democracy and Technology (<http://www.cdt.org>), which says it is committed to "develop and advocate public policies that advance constitutional civil liberties and democratic values in new computer and communications technologies," is at the forefront of this debate, which is attempting to explore ways in which this nascent technology will/should/could affect our current democratic institutions.

At the Political Participation Project site (<http://www.mit.edu/projects/ppp/home.html>), you can find a recent report from the U.S. Department of Commerce called "FALLING THROUGH THE NET: A Survey of the 'Have Nots' in Rural and Urban America." In it, the government reaffirms its goal of creating universal access to the basic starting point: telephone lines. But, the report concludes, "while a standard telephone line can be an individual's pathway to the riches of the Information Age, a personal computer and modem are rapidly becoming the keys to the vault." And, as the Commerce Department admits that it doesn't even have a clear idea of telephone line saturation, America is a long way from universal access to the resources of the Internet.

NETWORKING ONLINE

Aliza Sherman

One of the first uses of the Internet was for computer scientists and engineers to network with one another. In the past 20 years, the networking possibilities the net offers have exploded, as the number of wired people has grown at a phenomenal rate. Today, there are loads of different kinds of people — everyone from calligraphers, lawyers, and doctors, to motorcycle fanatics, grad students, and job seekers — networking online. With online forums about everything from motherhood or fathering to gardening, fashion, sports, money management, soap operas, cooking, health, travel, music, family, sewing, and feminism, the net lets people seek advice, find support, and gain a sense of community with others of similar interests around the world. It also enables peo-

ple far away from one another to transport large files of all kinds, things a fax machine could never handle and that even overnight delivery can't beat. Moreover, e-mail beats the postal service hands down for speedy and reliable delivery.

In offering up an example of how people are networking with each other, we decided to focus

on a group of people considered by many to still be a minority on the net — women.

Women have met

The TAP site (<http://www.cs.yale.edu/homes/tap/tap.html>) is great for networking.

online and then gathered in cities around the world for face-to-face social and professional meetings. Some of the women who've worked hard to network with other women on the net have, in the process, created valuable resources to help encourage online activity (see sidebar, page 43). Women networking with other women online have, in the process, received advice for problems in personal relationships, shared the birth of a child with women from around the world, discovered lost friends from school, and found jobs online. They've also met women who live across town or across the globe, and discovered how to grow better tomatoes. Women in remote areas

have found other women for conversation, and to exchange information and research or share resources.

Overall, women are going online to communicate in new ways, to do research quickly, to make contacts around the world, to be entertained, to self-publish and to be heard. Women are discovering how the Internet and World Wide Web can truly enhance their lives, both personally and professionally, and they are reaping the benefits from getting online.

Among the women networking pioneers of the net are:

Nancy Rhine, founder of the now-defunct BBS Women's Wire. Currently, she's director of Women's Programming for America Online and GNN. A single mother of three daughters, she's a true visionary about building virtual women's communities.

Barbara Ann O'Leary, a feminist activist, has created Virtual Sisterhood, a global women's electronic support network (<http://www.igc.apc.org/vsister/>) that includes the vs-online-strat mailing list and the Virtual Sisterhood's WWW Development project. The latter brings volunteers together with women's organizations that would like to have a Web presence.

Stephanie Brail, a freelance writer, is an entrepreneur who owns a computer training and

Women's Wire (<http://www.women.com>) links you to lots of other women's sites.

Five Ways to Network:

1. Get on a mail list. There are thousands of mail lists, and they offer the quickest way to build strong relationships among people with similar interests. People on mail lists very quickly form communities, even around the driest of topics. To get a list of most major mail lists, send mail to listserv@brownvm.brown.edu or listserv@bitnic.educom.edu. In the text body, type: list global.

2. Get access to Usenet newsgroups. Like mail lists, newsgroups provide an easy way to quickly find people who share your interests. There are more than 10,000 newsgroups, so it's very likely that there are others who share your passion. Two good Web-based search engines that can help you find newsgroups are at <http://sunsite.unc.edu/usenet-ii/> and <http://www.cen.uiuc.edu/cgi-bin/find-news>. Also, there are several Yellow Page directory books with Usenet listings, and most service providers offer members a list.

3. Use major Web search engines such as Lycos or Yahoo! to find other people who have built home pages that complement your interests. If you like a page you've found, link it from your own home page and ask the creators if they might consider linking you. Usually, people are happy to oblige, though sometimes it may take them a while to actually update their site. Many people don't have direct access to their Web servers, and need considerable time sending files around.

4. Follow the links on a Web page you like, and if you like the pages you find, ask those creators if they might consider linking your page, and so on and so on. Tracing through links is probably the best way to network using the World Wide Web.

5. Find a local computer users' organization. Often, many people with diverse interest who may not find each other via standard e-mail, Usenet, and the Web, will often find other common interests in these local organizations. It's also a chance to take some of these digital relationships and bring them into the physical world.

The work of Malika Agueznay of Morocco is among the offerings on the World's Women On-Line site.

consulting practice. She's also the creator of the Spiderwoman mailing list for women Web designers (send e-mail to majordomo@lists.primenet.com with the message: subscribe spiderwoman).

Eva Shaderowfsky, a photographer and writer who was stricken with Chronic Fatigue Syndrome (CFS) in 1991, went online when her life as an artist was shattered by her illness. After seeking support for CFS and finding nothing, she formed a CFS support group on America Online and went on to host weekly women's live real-time conferences online.

Joan Korenman, a professor and director of Women's Studies at University of Maryland Baltimore County, created WMST-L, an e-mail list for Women's Studies teaching, research, and program administration. It boasts more than 4,000 subscribers in 39 countries. (To subscribe, send an e-mail to listserv@umdd.umd.edu, with "subscribe WMST-L" and your name in the message.)

Women Online: They're Not Shopping!

According to Interactive Publishing Alert's 1995 Survey of Women Online (<http://www.netcreations.com/ipa/women.htm>), which polled more than 300 women online, women who go online put "communications" at the top of their agendas. Shopping ranks dead last. When asked to name the online features they used the most, 237 respondents picked swapping e-mail with friends and family; 214 respondents named special-interest bulletin boards.

The early findings of a new report surveying 2,000 women — "CG Internet Media's Profiles of Women Online" — echoes IPA's findings. It shows that 33 percent of the women surveyed on the Web said their main reason for going online was for research. Thirty percent cited e-mail, while a mere one percent attributed their online time to shopping.

The CGIM study also found that approximately 62 percent of the women it surveyed are between the ages of 18-35; 64 percent have either some college background or a bachelor's degree; and 34 percent make between \$20,000-\$40,000 annually. Forty-seven percent of them said they'd been online for less than one year, and many who answered the survey wrote in that they had been online for less than a month.

NETWORKING WITH OTHER WOMEN ONLINE

TAP: The Ada Project

<http://www.cs.yale.edu/homes/tap/tap.html>

Designed to help women "tap" into Internet resources, TAP has everything from computer science fellowship and grant info to lists of conferences, organizations, discussion groups, and more. A good starting place.

The World's Women On-Line

<http://wwol.inre.asu.edu/intro.html>

The site serves as an electronic art networking project that seeks to use the Internet as a "global exhibition" for women's experience and culture. Various women artists from around the world are represented, along with GIFs of their work.

Virtual Sisterhood

<http://www.igc.apc.org/vsister/>

A wonderful example of grassroots organizing on an international level, Virtual Sisterhood offers free Web space and Web page creation to small women's organizations all around the world.

Web-sters' Net-Work

http://lucien.sims.berkeley.edu/women_in_it.html

Connect with other women in the fields of library, information, and computer science.

Webgrlls

<http://www.webgrlls.com>

A "real-world" networking group for women in new media, or interested in it. There are chapters in the U.S., Canada, the U.K., and Australia.

Women and Computer Science

<http://www.ai.mit.edu/people/ellens/gender.html>

There's a great collection of links to women and computing sites, plus a wide assortment of essays, speeches, and articles about women and computing.

WomensNet (at IGC)

<http://www.igc.apc.org/womensnet/>

Here's a network that's been created to help women activists and women's nonprofit organizations share information. WomensNet provides e-mail accounts, net access, and Web publishing help to its members.

Women's Web

<http://www.womweb.com>

This site was conceived as an online community for women (and men) who want to "learn more about women in business and about women's issues and

their lives." Interactivity is a key tenet here, so there's lots of opportunities to participate.

Women's WebWorld

<http://www.feminist.org>

This site, which brings the Feminist Majority online, has an "Urgent Action" section that helps you get involved in political activities, job postings, a university network, and a good news and events section.

Women's Wire

<http://www.women.com>

This online magazine for women links you to lots of other women's Web sites, including women's businesses, upcoming events, parenting resources, and much more. Besides that, it has lots of woman-related news, people watching, and a good "back talk" section that lets you e-mail the site creators with "what's on your mind."

Womenslink

<http://www.womenslink.com>

It's a library, a cafe, a wellness center, and a spa — all in one. The motto of this site, which was put together by Bristol-Myers Squibb (maker of Clairol® among other products), is: "Cyberspace isn't a men's club anymore." Check out the very good Resource Center, which has information for working moms.

Internet Mailing Lists:

cyber-sisters (for women artists and writers):

Send e-mail to majordomo@cgim.com, with the message: subscribe cyber-sisters.

internet-women-help (general assistance for women online):

Send e-mail to majordomo@lists.best.com, with the message: subscribe internet-women-help.

vs-online-strat (feminist activism):

Send e-mail to majordomo@igc.apc.org, with the message: subscribe vs-online-strat

spiderwoman (Web designers):

Send e-mail to majordomo@lists.primenet.com, with the message: subscribe spiderwoman

internet-women-info (general info for women online):

Send e-mail to majordomo@lists.best.com, with the message: subscribe internet-women-info

the women's list (for e-mail networking):

Send e-mail to majordomo@cgim.com, with the message: subscribe women-list ■

Womenslink (<http://www.womenslink.com>) has created a cyber "women's club," complete with online library, spa, cafe, and wellness center.

NEW YEAR'S RESOLUTIONS!

1. ~~Eat healthy~~
2. ~~Clean out garage~~
3. ~~Exercise~~
4. ~~Visit my mother-in-law~~
5. ~~Subscribe To CD-ROM Today~~
- 6.

- More reviews than any other magazine — over 50 CD-ROM titles covered in each issue
- Hands on coverage of cutting-edge hardware
- No jargon. No technobabble. Just helpful hints on making all of this stuff work.

CD-ROM *Today*

BUYING CDS ONLINE

Wayne Cunningham

Everybody likes music. Whenever I'm mingling at a party, after the inevitable "So, what do you do?" question has been tapped out for all its conversational worth, the next topic is almost always

music. If the topic turns to politics, half the time the conversation is over because I wind up thinking, "Why am I talking to this idiot?" But with music as the conversational topic, I'm much less likely to conclude that I have absolutely nothing in common with someone if he or she likes a music genre that I don't. Sure, I might lose some respect for country and western fans, but it certainly wouldn't kill the conversation.

This common love for music has found its way on to the Internet in a big way. Forget pornography. Forget the Mac vs. PC debate. Music resources and information probably take up more bandwidth than either. Not only are there all sorts of information on your favorite bands, there's quite a lot out there that exposes you to new music you might never have heard of. There are more than 200 alt.music newsgroups on Usenet, and it would be impossible to count all the Web sites that have some kind of music connection.

O.K., time for an anecdote. I was having break-

fast at my favorite cafe, and one of the java jockeys had put on some eclectic mix tape. A song came on that I really liked, but all I knew about it was that it had the refrain, "26 miles across the sea, Santa

Catalina is the place for me." I went to the online CD stores with the best search engines and searched on Catalina, and Santa Catalina, but came up with nothing. Then I went to the WebCrawler

search engine (<http://www.webcrawler.com>) and tried Catalina as the keyword. I ended up with the information Web site for Catalina Island (<http://www.catalina.com/index.html>), off the coast of Southern California, and at the top of the page found a couple of lines from the song, but no further information. I then e-mailed the editor of the island's local newspaper, who provided me with the actual title, "26 miles," and the artists, The Four Freshmen.

The Internet All-Music Guide has a huge collection of record reviews.

Probably the best general source for information on recorded music is the Internet All-Music Guide (<http://allmusic.com/AMG>). It's a collection of reviews by more than 200 freelance music journalists, and probably the largest collection of record reviews

The Ultimate Band List attempts to catalog every fan site on the Internet.

The Value of Buying CDs Online

	CDNow! http://www.cdnow.com	Music Boulevard http://www.musicblvd.com	1-800 Music Now http://www.1800musicnow.mci.com	i?music/media http://www.icw.com/cd/imm1.html	CDWorld http://cdworld.com
Alanis Morissette <i>Jagged Little Pill</i>	\$15.36	\$13.49	\$13.99	\$15.97	\$13.77
Faith Hill <i>It Matters To Me</i>	\$14.96	\$13.49	\$14.99	N/A	\$13.77
Mariah Carey <i>Daydream</i>	\$13.96	\$12.96	\$12.99	N/A	\$13.77
John Tesh <i>Sax on the Beach</i>	\$14.77	\$11.99	\$15.99	\$13.97	\$12.77

Total:	\$101.29	\$93.39	\$91.08	\$71.80	\$91.14

This chart compares the value you'll find at the major online record stores. All of these stores have online ordering, and delivery in two to four days. The music was chosen for comparison and selection purposes only; *The Net* does not endorse or encourage readers to listen to any of these recordings, especially not John Tesh. Music stores that came up with an "N/A" for any recording obviously have a poor selection. The online ordering and search capabilities were good for every store except i?music/media. We personally think the best two stores are Music Boulevard and CDWorld.

in the world. It started as an FTP site, in the pre-Web days, and now exists in a nicely designed HTML format. The online music store CDNow! (<http://cdnow.com/>) provides it with the server space, but other than links to the CDNow! listings, the All-Music Guide is completely independent.

One of the most comprehensive sites, with local and linked resources for

information about all sorts of music, is Music Resources (<http://www.siba.fi/Kulttuuripalvelut/music.html>). This site is supported by the Finnish Sibelius Academy of Music. Just about every music resource on the Internet is linked here, including music libraries and composer biographies.

If it's popular music

you're interested in, then take a look at the Ultimate Band List (<http://american.recordings.com/wwwofmusic/ubl/ubl.shtml>).

The folks at the American Recordings label have put this site together in an attempt to catalog every fan site on the Internet. If you have a fan site, this would be a

place to get it listed. Personally, I like surf music, so my favorite resource is Surf's Up (<http://www.cygnus.com/misc/kfjc/surf/>), a site by disc jockey Phil Dirt. Before you order any music online, though, take a peek at our value comparison chart on online music stores (page 45). Remember — every penny you save can be plowed back into online cruising time. ■

AND THE BEAT GOES ON... Tina Blaine

The explosion of musical resources online is rapidly creating a dynamic means for networking opportunities between and among musicians and the music industry. On the net, you'll find a cross-hybridization of services for those in the indie/alternative music business, those in the business of making music, and those who simply want to enjoy music. There's unlimited accessibility for signed and unsigned artists, as well as independent and major record labels. You'll also find previews of new releases, club listings, booking and touring info, fanzines, books, software, instruments, new products, reviews, online chats, and more — everything is possible with a click of your Web browser.

Here I'll give you some ideas on where to go, how to get there, and what to do when you finally make it to Nirvana (<http://www.vol.it/NIRVANA/sitiwww.html>).

READY TO ROCK AND ROLL?

The most obvious way to start out would be to point your Web browser to <http://www.yahoo.com/Entertainment/Music/> to do a net search. You'll find links to artists, movie soundtracks, marching bands, grunge, or karaoke. If you already know what you're looking for, you may want to be a bit more specific in your search and type in a band name, an instrument, or a genre of music. WILMA — the Worldwide Internet Live Music Archive — maintains venue listings, tour directories, and concert reviews (<http://underground.net/wilma/index.html>).

For a trip back to the psychedelic 60s, check out the revolution in rock poster art at <http://www.artrock.com/>, or visit all your favorite dinosaurs on the Ultimate Band List at the Web Wide World of

Music (<http://american.recordings.com/WWWoM>).

The University of Indiana Music Library maintains an extensive list of academic and non-academic resources on the Internet at <http://www.music.indiana.edu/misc/nonacademic.html>. I spent hours cross-referencing Bhangra music (<http://yucc.yorku.ca/home/sanraj/bhangra.html>) with the music of Brazil, the Caribbean, and Africa (<http://www.matisse.net/~jplanet/afmx/ahome.htm>).

Eventually, I found myself transported to India (<http://www.math.fsu.edu:80/~tchawla/Punjab/culture.html>), then to Zimbabwe via Portland and Seattle (http://www.teleport.com/~dbullock/shona_music.shtml).

I was also sidetracked along the way by links to the Drums and Percussion Pages (<http://www.cse.ogi.edu/Drum/>), newsgroups,

GETTING WIRED FOR SOUND

If you're ready to hear what's out there on the net, you'll need to install a few freeware or shareware (\$15 or less) helper applications to get going. Some of the most common audio files you'll find in cyberia are ULAW (a.k.a. AU; they're used by Unix machines), AIFF (for Macs), WAV (for Windows), and MPEG (for Windows, Mac, and Unix).

If you're on a Mac, SoundMachine will play and record AIFF and ULAW sounds. If the site you've chosen has WAV or MPEG files, you'll want to download SoundApp (which plays back AIFF, WAV, and AU), and the MPEG audio app (.mp2), not to be confused with MPEG video. To download SoundMachine, SoundApp, MPEG audio, and numerous other freebies, log into [http://www.host.ots.utexas](http://www.host.ots.utexas.edu/mac/pub-mac-sound.html)

[.edu/mac/pub-mac-sound.html](http://www.host.ots.utexas.edu/mac/pub-mac-sound.html). For those cruising on a PC machine, drive by <http://www.cdlink.com/download.html#1InternetFree> to download a copy of WHAM for Microsoft Windows (AIF, AU, and WAV), WPLNY (W-play-any AU, VOC, WAV, SND, and AIFF), or Cool Edit, which plays back just about everything. You can also download MPEG sound players for Windows, Macintosh, and Unix platforms at <http://soundwire.com/mp2players.html>.

THERE'S MORE...

If that's not enough to make your head swim, RealAudio, CDLink, and Xing Technology's Streamworks are also making some headway in the digital audio world. RealAudio's home page, at <http://www.realaudio.com>, harbors sound bytes,

servers, and encoders for Macs and Windows. At CDLink (<http://www.cdlink.com/>), you'll find a TrueSpeech player for Windows with a Mac player soon to come. Another proprietary CDLink application for Mac and Windows is available from Voyager at <http://www.voyagerco.com/cdlink>. You can also download the StreamWorks audio/video server (for Windows and Unix platforms; audio only for Macs) at <http://204.62.160.251/streams/index.html>.

BUY BUY BYE

With the commercial availability of recordable CD players, we will soon be able to download music directly from the artists and bypass the distribution network altogether.

Until then, Sound Wire (<http://soundwire.com>), CD World Discount Store (<http://CDWorld.com/>), and the InTouch Group (<http://www.worldwidemusic.com/>) are just a few of the online services that offer thousands of downloadable sound samples and CDs. The Music Exchange (<http://www.scsn.net/~musex/>) claims to be the best way to buy, sell, or trade anything musical. Also check out the Guitar Pages (<http://comp.uark.edu/~cbray/html/guitar.html>) to trade rhythms, tunings, and techniques. Real-time net jams provide a way for musicians all over the world to

MIDI Farm

<http://www.midifarm.com>

PLAY BY PLAY: OVERVIEW OF ONLINE GAMING

Crystal Waters with Trent Ward

The phrase "online gaming" has become as vague and all-encompassing as that mystery term "multimedia." Online gaming started with text-based role playing games, along the lines of Dungeons and Dragons, either in a real-time chat room or via messaging. And now, it's used to describe online services whose interfaces allow two

One of the best places to start looking for online fun is AT&T's ImagiNation Network, a system designed for nothing but multi-player gaming. All you need to do to get the software is call 800 IMAGIN 1, or download the software from <http://www.inngames.com/> (Windows only). At press time, the company was offering 10

variety of parlor games, like Chess, Checkers, Hearts, and Go.

If you're interested in huge, multi-player role-playing games, Medievaland is the place to go. Casinoland has gambling games like Poker, Roulette, and Blackjack, and the

The Entertainment Network gives you access to other multi-players through its server.

Hop over to the ImagiNation site for pricing information and free software.

or more people to engage in multi-player board or card games, such as chess or bridge. It also describes services that let members play networkable games, such as Doom, against a multitude of other members via their Internet server. We're also seeing an increasing number of Web-based games (see sidebar).

Here's a taste of online services dedicated to gaming, and services with online gaming options. We've also thrown in some resources that will keep you up-to-date with this growing field, and maybe even find you a cheat or two. Whether you want to play bridge or blow one up, there's plenty to choose from.

ImaginNation Network

<http://www.inngames.com/>

free hours for potential users to try out the network. Once you've got all of the software in front of you and have loaded it up on your PC, you'll be confronted with an easy-to-use interface that helps you create an online persona.

After you've logged onto the network, you'll see a landscape map of the ImagiNation cyberland. Several different sublands are shown (like Casinoland, Clubhouse, Post Office, and Medievaland). Clicking on any one of these areas will take you into new places,

Web-based

each with their own flavor, rules of conduct, and games. The Clubhouse is the best place to get started, since it has hosts who are glad to answer any questions you may have about how to enter certain areas, where to find technical support, and why everyone is picking on your choice of character portraits. Games in the Clubhouse area include a

Total Entertainment Network

<http://www.ten.net/>

A newcomer on the online playing field is the Total Entertainment Network, or TEN. It's geared toward 18- to 36-year-old gamers. Members of TEN who are fans of SimCity or Falcon 4.0 can play against other

members via modem through the service, and TEN promises a steady growth of role-playing, board/card games, and strategy/wargames in the near future.

TEN works with existing game developers to provide plug-in APIs (or Application Programming Interfaces). These extensions let multi-player games work via the TEN network and become accessible through the TEN "Lobby," where such game

Games

If you're looking for Web-based games, there's plenty to choose from. Just don't get your hopes up. From Hangman (<http://cybersight.com/cgi-bin/cs/hangman>) to Blackjack (<http://www.ua.com/blackjack/bj.html>) to a BattleShip rip-off (<http://polaris.biology.ucla.edu:8088/ships/Home.shtml>) and TV game show copies, such as HyperJeopardy (http://www.hype.com/game_show/), they're out there and their numbers are growing. Unfortunately, these types of games lack the entertainment impact of a stand-alone game because of HTML's limitations. For example, in Blackjack, once the server has dealt you and the "dealer" a hand, you click on a button next to an amount of money to place a bet. Once you click on the "bet" button, the form's script then sends your info to its CGI server, which in turn churns out random cards and sends a new HTML page to your screen. You'll wait while a whole new page full of images has to draw. Want another card? Click "hit me," and off goes the CGI server to do its random business again. It works, but even over a super-fast T1 line, the thrill of being able to play Web Blackjack is quickly stifled.

statistics as player scores, halls of fame, and other member records are kept.

TEN Members receive a CD-ROM with all available multi-player games. They also get access to a software library, live chat, a messaging area, the Internet, and local e-mail, not to mention entertainment and game news and reviews. Plus, although we haven't seen this, TEN says it gives Web access through a propriety browser. At press time, prices were \$10.95 a month for five hours of access, plus \$3 per hour for each subsequent hour. While there are promises of Macintosh software soon, TEN is only supporting Windows 95 at this point.

Outland

<http://www.outland.com>

One of TEN's developmental partners is Outland (which is presently for Macs only). Software is downloadable from Outland's Web site (<http://www.outland.com/>), or through FTP (<ftp://ftp.outland.com>). Via a TCP connection (either by modem or direct connection), players connect to Outland and are faced with a menu of playing options.

At press time, games included Spaceward Ho!, in which you play the leader

of a spacefaring race; Galley, where members battle others with mines and cannons from the deck of their sailing vessel; plus standards such as Chess, Backgammon, Reversi, and Hearts. To subscribe to Outland, just sign on as a new user using the Outland software (it'll ask for a credit card number, so be prepared). For \$9.95 a month, Outland members have unlimited access to the service 24 hours a day.

Concentric Network Corp.

<http://www.cris.com/>

At press time, Concentric Network Corp., a steadily growing international internet access provider, was touting free multi-player game connection as part of its membership package. Its Game Connection is an area on its server that allows you to play network and modem-to-modem games (such as Doom and Descent) against other members. Concentric also offers a gateway to Kesmai Corp.'s Air Warrior and Interactive Creation's Warbirds.

Concentric offers flat-rate connections, or subscription plans for as low as \$7.95 per month, as well as free space for your own Web page. For more information, head over to

<http://www.cris.com/>,

write cncsales@concentric.net, or call 517 895 0500.

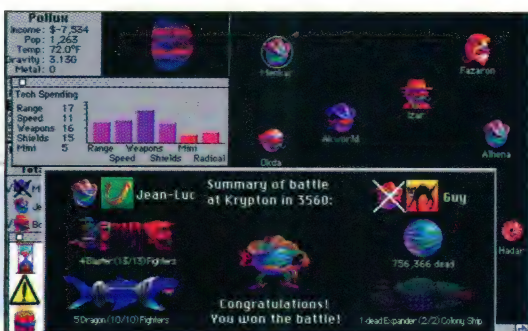

Other Choice Choices

Although you aren't going to find as many different games for your money, there are some other online services with some really choice play options. GENie, a long-time online service, has two really good action game options for its Windows members. SVGA Air Warriors is a good-looking flight sim that offers pilots everything from biplanes to modern aircraft in multi-player dogfights. Sci-fi fans will want to jump behind the controls of a multi-ton robot in Cyberstrike, the company's newest online addition. If you can't get a hold of some startup software, give the folks at GENie a call at 1 800 638 9636, or hook into them at <http://www.genie.com/>.

Fans of id's line of software greats will want to check out PlayNet, a service that features online versions of Doom, Doom II, and Heretic. Although they're kind of expensive (O.K., really expensive) for such limited play options, this is the best way to find

THE NET March 96

PLAYING THE STOCK MARKET

Minda Sandler

For the intrepid individual investor who's online, it's incredibly easy to join the fray and attempt to land that nest egg via smart stock picks. The Internet has a vast number of resources to help individual investors who want to take control of their portfolios and use independent resources to build investment strategies.

Investment Tools

A good place for intrepid wired investors to start is **INVESTools** (<http://www.investools.com/>). If you're looking for information about how a specific company is doing, for instance, search through this site's collection of investment newsletters and research services, as well as reports, earnings estimates, and fund reviews. While there's no monthly fee for use of the site, you do pay for specific services or articles you access.

Another good resource

is the Charles Schwab Web site (<http://www.schwab.com/>). This well-organized and easy-to-navigate site lets you apply online to open a Schwab account, download a demo of Schwab's portfolio management software, and find out about the many ways to invest your money.

Researching Your Portfolio

Those who want to get a crash course on specific companies must pay a visit to **EDGAR** (Electronic Data Gathering, Analysis, and Retrieval system). Located at <http://www.sec.gov/edgarhp.htm>, the site lets you download the filings that nearly three-quarters of publicly traded U.S. companies submit to the U.S. Securities and Exchange Commission. Filings dating back to 1994 are available.

A number of other net sites specialize in providing company research. At **Investor InTouch** (<http://www.money.com/ssnhome.html>), you'll gain access to investor relations information and equity research on 15,000-plus companies. **InvestorWEB**

Investor InTouch and **Schwab Online** are great resources for online investors. If you're not sure you're ready for them, try managing a pretend portfolio at the **Stock Market Challenge** (<http://smc.sierra.com/>).

(<http://www.investorweb.com/iwebhome.htm>) publishes company information to help you decide whether to invest.

There's also an automated press release service to keep you updated over time. And **Wall Street Net** (<http://www.netresource.com/wsn/>) provides the latest on corporate debt and equity financings, monitors companies for you, and has archive data on past transactions.

Real-Time Quotes, Transactions

One of the best sources of stock quotes is the **Security APL Quote Server** (<http://www.secapl.com/cgi-bin/qs>). It has a Market Watch page that's updated once every three minutes from 8 a.m. to 6 p.m. Eastern Standard Time, Monday through Friday. The quotes are delayed 20 minutes. If you want to act on this information, click on over to the **NET Investor** (<http://pawws.com/tni/>), where you can execute online trades in stocks, bonds, mutual funds, and certificates of deposit traded on major U.S. exchanges. (Accounts come with encrypted numbers and passwords.) **Lombard Institutional Brokerage** (<http://www.lombard.com>) also lets you perform online trades of stocks and options, plus puts you in touch with a wealth of pricing and volume information. ■

BEAT THE TAXING TIMES: SECRETS AND INSIDER TIPS ON BESTING UNCLE SAM

Todd Marshall

It's the time of year that strikes fear in the hearts of America's working class. Tax time.

Every year, amid the procrastination and April 15 deadline, many of us take the easiest route, and take our licks on returns. It's estimated that millions of dollars that could have actually been deducted are lost annually to old Uncle Sam; that they weren't deducted is simply due to a lack of knowledge. For instance, did you know that you can (under the right situations, no cheating now) deduct your computer, or even your dog, if you use it or him for your business practices? There are also some more obvious ways to take the sting out of tax time, like getting a payment plan from the IRS, or finally breaking down and letting H&R Block do it for you.

But before you throw in the towel, check out the cool Web sites we found that deliver choice insider information to help you beat the tax man. Note, though, that despite the huge improvement of Internet capabilities over the past year, it's still not possible for you to personally file your returns electronically. While filing electronically means it will go through faster and you'll get a return check earlier in the year, you still need an accountant to actually do the deed for you. Check out the Yahoo! offering of wired accountants to your right.

Income Tax Information in Internet

<http://www2.best.com/~ftmexpat/html/>
When you start your frantic search for tax information on the night of April 14, put this page at the top of your bookmarks. You'll find everything you ever wanted to know about income taxes, but were afraid to ask. There's links to new tax laws, all the tax forms you could ever ask for, state tax information, software, and a variety of newsgroups and FAQs.

The IRS Homepage

<http://www.ustreas.gov/treasury/bureaus/irs/irs.html>

While it isn't the most visually pleasing, the Internal Revenue Service's home page has some excellent information — like where to file, depending on the state you live in; every single tax form known to man in Adobe Acrobat's PDF format; places to get FREE tax help; and information on Tele-Tax, the IRS' free phone information line where you can get up-to-the-second tax information, and even check on the status of your own refund check.

Also, be sure to check out the wonderful exposé on Peggy Richardson, the commissioner of the IRS.

NestEgg Magazine

<http://nestegg.iddis.com/irs/irsdown.html>
This magazine of personal finance has gone on the Web recently, and brought with it a ton of tax-related articles (although many are outdated). For some reason, the magazine has also decided to offer the same PDF files that the IRS does (although the IRS server is just as fast, and you know it'll have the most up-to-date forms). NestEgg is a pretty cool magazine; be sure to check out some of the other personal finance areas it covers.

Twenty-Five Most Common Tax Preparation Errors

<http://www.ey.com/us/tax/25error.htm>
It's not quite as entertaining as Dave Letterman's Top 10, but this list was created by Ernst and Young and serves as a nice checklist.

Tips include double-checking your Social Security code and adding up the right-hand column one more time. You'll also learn which documents to include with your filing to speed up your return process.

Tax and Accounting Sites

<http://www.uni.edu/schmidt/bookmark.html>
Although this is nothing more than a page of links, it's beautifully organized. It has more links to state tax information than we could find anywhere else. There's also links to additional governmental legislation on taxes.

Tax World

<http://omer.cba.neu.edu/home>
Suddenly, as you surf around, read about taxes, you'll find yourself becoming more and more obsessed about Delaware's current tax legislation on RVs. You must know more, you must know everything. That's when you come here to get a history of how taxes came about.

The Entire Federal Tax Code

<http://www.tns.lcs.mit.edu/uscode/>

You want the tome. The complete and uncensored federal tax laws of the United States in print. It's here. It's bigger than *War and Peace*. No one has read it all and lived. But seriously, the site also has a search engine, so you can track down specific laws and see what's what, as long as you can speak some legalisms and accountant-ese.

Misc.Taxes FAQ

<http://www.cis.ohio-state.edu/hypertext/faq/usenet/taxes-faq/part1/faq.html>

Although this is one of the longest HTML documents in history, with no hyperlinks to various parts, there's still some good information written in plain English here. The table of contents at the top helps, but plenty of scrolling is required. Some of the meatier topics include Tele-tax, inheritance and gift laws, and IRS penalties and interest.

Misc.Taxes Newsgroup

news:misc.taxes

For a more kinetic and up-to-date source of information, check one of the few newsgroups on the subject. While this is an ideal place to find new sources of information, take all the "official tax information" found here with a grain of salt.

SoHo Central

<http://www.hoaa.com/>

For small and home-based offices and businesses, there's a whole different set of rules. The Home Office Association of America is the force behind this page, which is not incredibly heavy on tax information (although it does have several articles on SOHO-related subjects). It gives you a good idea of what the association is about, and what kind of tax tips and tricks it delivers once you become a member. Plus, the membership is tax-deductible.

SoHo America

<http://www.soho.org/>

Beating the same drum, SoHo America is another organization on the Internet that's worth checking out if you run your own business or work from home. Once again, to get the meaty information, you have to join, and there doesn't appear to be quite as much information available. Nice page, though.

Tax Services and Products

http://www.yahoo.com/Business_and_Economy/Products_and_Services/Financial_Services/Taxes/

Who knew so many accountants had modems? There are hundreds of tax services online offering their ministrations. A few of them have some fairly high-tech set-ups.

Bank of America

<http://www.BankAmerica.com/>

After you've filed, you may notice that you owe a little more than you'd bargained for. Never fear, corporate enterprise is here!

Get a loan to pay off your taxes. You never know, it could be deductible. ■

VIRTUALLY TRAVELING

Wayne Cunningham

OR PRACTICAL TRAVEL PLANS ON THE INTERNET

I don't know how I got caught up in it, but early Monday morning, I found myself planning a trip to Hong Kong. *She* had said "Festival of Lanterns," then she said, "Hong Kong." Maybe it was the late hour, the champagne. Anything seemed possible. A trip to Hong Kong? Give me something difficult, like finding the next incarnation of the Dalai Lama. So here I was looking for information and resources on the Internet.

of the travel agents.

I went over to The Sabre Group (http://www.amrcorp.com/sabr_grp/sabr_grp.htm), the company that runs an airline reservation network. Its site told me about easySABRE, a service that allows consumers just like me to book their own flights. It also told me that easySABRE is only available on the commercial online services. O.K. So, I went to CompuServe (burning up some online time dollars) and cruised to its Travel section. From there, I gained access to easySABRE, Travel Shopper, and United Connection. I found easySABRE fairly easy to use, and came up with a round trip fare of \$1,867.95.

Being a comparison shopper, I exited from easySABRE and went into Travel Shopper. It was just as easy to use, and I found an even lower round trip fare of \$1,686.00 on a flight with connections. Progress!

I then tried United Connection, which was very annoying because of the forms it makes you fill out, and then refill out if you want to check another price. There, I came up with

This is one of the most interactive and useful travel sources on the Web.

the same \$1,867.95 fare I'd found on easySABRE. Feeling a little bit frustrated, I called a travel agent and got a non-stop, roundtrip fare of \$1,731.90, along with the advice that I could probably save some money if I didn't leave on a Saturday. I don't know how travel agents do it, but they're better than I am.

Later, I found a great Web resource for flight reservations at the Internet Travel Network (<http://>

easySABRE is not all that easy. For one thing, it's not Web-accessible. You have to have an account with an online service provider. But it does have a direct connection to a major airline reservation system.

I've used the Internet to plan a vacation before, but I heard that in the interim, there'd been some new advances related to getting flight information and making reservations online. I've always envied the secret knowledge base of travel agents; how they can interpret the strange letters, and know arcane rules like, if you travel on a Tuesday, you'll get a better fare, as long as you're not returning on a Monday or a Tuesday. From what I'd heard, I could now do it all myself, thanks to the Internet, and not be subject to the whims

Virtual Tourist presents the world as clickable image map, an obvious and very useful way to zero in on a travel destination for the real or virtual traveler.

Cities in tech-savvy countries often have a number of guides to choose from. Hong Kong has the Online Tourist Guide.

www.itn.net/itn/). It was very easy to use and gave me a lot of options, and I was able to find a roundtrip flight (with connections) for \$1,743.90.

So I knew how I was getting there, but what was "there" going to be like? Previous experience has taught me the wonders of Virtual Tourist (<http://wings.buffalo.edu/world/vt2>) and City.Net (<http://www.city.net/>). A clickable map of the world lets you focus on any city to find out what resources it has on the Web. And Hong Kong, being technically hip, has plenty of online resources, I found.

For example, there is the Hong Kong Online Tourist Guide (<http://www.hk.super.net/~webzone/hk.html>), which has all sorts of information about hotels, things to see, etc. The hotel information was the most useful, because it listed the price range for rooms. Of course, these are in Hong Kong dollars, so I went back to

The Marriott site covers institutional food services as well as hotels.

the City.Net page and found a link to foreign currency exchange rates (it was \$7.7435 on the day I checked). The only problem with this particular hotel list is that it doesn't have links to any of the individual hotel sites, and I really wanted to make some reservations online. I backed out of City.Net, and went looking for other resources.

A site that focuses more on the hotel part of travel is WebScope's travel section (<http://www.webscope.com/travel>). Through WebScope, I probably found an entry for every single hotel in Hong Kong.

Unfortunately, the only ones with their own Web sites were the Hyatt (<http://www.travelweb.com>), the Marriott (<http://www.marriott.com>), and the Shangri La (<http://www.shangri-la.com/shangri-la/home.html>).

And I was cheated from being able to make online reservations since none of these sites allowed it. The reservations section always just gave a phone number. And that would mean I would have to get offline! But if that's our current level of sophistication, so be it.

Another service I found that didn't particularly appeal to me was Travel Discounts (<http://www.traveldiscounts.com/discount/index.html>). This

Travel Discounts has a promising name, but all it offers are pre-packaged tours. If it's Tuesday, this must be Belgium, anyone?

Web site lists a whole bunch of tour packages for very reasonable prices. And it also lists the schedules, which were generally like "two days here, one day there, another two days here," etc.

One of the points of traveling, for me, is to have the freedom to go wherever I want to, so the tour idea was definitely out.

Now, maybe this is anal, but I think it's always a good idea to see what the CIA has to say about a foreign destination. Since our tax dollars pay for this government agency to find out all sorts of international information, we might as well use it in our travel plans. The CIA has been nice enough to make its World Fact Book available online at <http://www.odci.gov/cia/publications/95fact/index.html>. This is an excellent resource, with maps and statistics.

Happy Trails! ■

WIN FREE STUFF ONLINE!

Shel Kimen

Give me free stuff," the masses holler from the bottom of the virtual stone castle in cyberspace. Sure, the Web looks pretty and has some interesting information to feed your aching brains, plus CDs to buy and games to play. But how can corporations that aren't selling CDs online or building software libraries lure visitors into their labyrinths? Why, of course, by offering free stuff — prizes and dream vacations. The masses will come because there are things to win, win, win.

If these Web mavens want us to come to their sites so badly that they've invented a few CGI scripting gizmos to ask us questions and send us on treasure hunts (all to find the gold at the end of the rainbow), why not take them up on it? I suspect one could play Internet contests and games for prizes all day long, every day for weeks, and still not

have to repeat a single one of them. Yes, there *are* that many out there. And in all this surfing and playing and surfing and playing, you're bound to at least win *one* prize — even if it is a lame t-shirt. Still, that's one more t-shirt than you had before. Yes, we are greedy — they are counting on that.

Of the bazillion Web contests available, I've picked some places that regularly offer decent (and even fun) games to play to win your fortune. Not all of these contests are based on the Web, though.

While you may need Web access to find out about them, many of the contests sponsor e-mail trivia questions and clues directly to your Internet account, and you play by sending messages back (with the correct answers, hopefully.) So, if you are of the low bandwidth net surfer variety, fear not. You can play, too!

Thread Treader's WWW Contest Guide

<http://www.4cyte.com/ThreadTreader/>

You'll probably want to start your journey with a contest directory. Sure as there are a bazillion contests, there are also that many places to find contests. The most helpful contest directory I've found is Thread Treader's WWW Contest. It has a featured contest that usually stays up for a few months, and these picks are usually very good. It also has a "what's new" section for the contests that weren't good enough to be "featured." There were 45 entries in this section when I last visited (that's a lot of potential coffee mugs and bumper stickers to win!). If you are a dawdler, like myself, take a peek at the "last chance" section to see which contests are almost over.

MGM

<http://www.mgmua.com/>

FOX

<http://www.foxnetwork.com/>

SONY

<http://www.sony.com>

Paramount

<http://www.paramount.com>

If you aren't so anxious to do a search, a good place to start are these movie and entertainment megasites. They're well-known for their elaborate Web hunts and contest marketing endeavors, often with bigger and better prizes — cars, vacations, televisions, etc. — than you'll find elsewhere. Most, if not all, of these companies will have a Web contest at any given moment.

The Fox Kids

<http://www.foxkids.com/kids/index.html>

Even though this site is part of the Fox Network site, it has some GREAT kid contests here. They've ranged from asking you to send in names for a drawing to challenging puzzles with Fox Network animated heroes.

The Zweblö Underground Fan Cult

<http://www.thoughtport.com/spinnwebbe/contest/contest.html>

This site was created by a mysterious guy who has a small business designing and selling T-shirts and bumper stickers. He also happens to like dreaming up contests (some of which even have prizes.) The site doesn't look like anything snazzy or ultra-mega fun-cool, but it's ingenious, and could provide hours of fun.

Check out *The Anal Retentive Extravaganza* contest. (Pay attention to the idiots around the world and win a T-shirt.)

Yoyodyne

<http://www.yoyo.com/>

It has some neat-o games that involve trivia questions, puzzles, and treasures hunts. These katz get big sponsors, like Arrid Extra Dry (get a little closer, heh) and Mazda (Play the "Car Chase" to win a Miata). Yoyodyne also rotates its contests to keep the site interesting, so keep checking back. Yoyo.com also offers lots of play by e-mail contests.

Riddler

<http://www.riddler.com>

The big whammy is lying at this site. It's the ultimate Internet marketing tool for big businesses right now (cuz it's popular and thinks up great contests). Hunt the net, race the tortoise against the hare, and get great graphics to boot! It is definitely required for the serious contest junkie!

So get started on your path to becoming part of the not-so rich and famous but pleasantly amused Internet crowd of contest goers. There's lots of stuff to be had. ■

The Net's Glossary

AIFF

One format of Mac sound files.

Archie

A database that provides information on where to find specific files and FTP sites. You can search by subject, title, or keyword.

AU Format

Unix sound files.

Baud

The number of analog transitions per second; not to be confused with bps (although it often is).

BBS (Bulletin Board System)

A dial-out or Telnet-in computer that usually provides e-mail, file archives, live chats, and other services and activities. Many are now connected to the Internet.

BPS (bits per second)

The amount of data that can be transmitted over a communications medium.

Client/Server

A relationship between programs running on separate machines in a computer network. The server provides services; the client consumes services. An HTTP server provides Web pages accessible by many clients simultaneously.

Domain Name

Denotes the name of a specific Internet area controlled by a company, school or organization. Our domain name is thenet-usa.com.

FAQ (Frequently Asked Questions)

Lists of answers to frequently asked questions are usually posted in newsgroups to help newcomers get grounded on a particular topic.

Finger

An Internet protocol used to find out more information about an Internet user.

FTP (File Transfer Protocol)

The Internet protocol for transferring files from one computer to another.

GIF (Graphic Interchange Format)

A graphic file format developed by CompuServe. Most images that appear on the Web are in GIF format.

Gopher

A browsing and searching system that lets you find and retrieve text.

Helper App

Add-on applications that support sound, image, and other formats that your browser can't support by itself.

HTML (HyperText Markup Language)

The coding method used to format documents for the World Wide Web. Web browsers display text, graphics, and links on a Web page by translating HTML tags.

HTTP (Hypertext Transfer Protocol)

The Internet protocol that the Web uses to send information to the client, so the client browser can view Web pages.

Hyperlink/Hotlink

The device that drives intuitive navigation on the Web. Click on a hyperlink or hotlink (usually a graphical icon), and you'll jump to another page within the site you're perusing, or another home page entirely.

Image Map

A graphic image that's used on a Web site as a navigational tool. It's made up of two elements: The graphic you see on the page through your browser, and a text file that contains link information.

IRC (Internet Relay Chat)

The Internet's version of CB radio, IRC lets you join a channel and converse in real-time with other folks on the same channel. Most channels are focused on specific topics of discussion.

ISDN (Integrated Services Digital Network)

Digital telephony scheme that allows two simultaneous connections over the same wire; can include audio or data.

ISP (Internet Service Provider)

A company that provides access to the Internet.

JPEG (Joint Photographic Experts Group)

An algorithm for compressing still images. Motion-JPEG, a variation of JPEG, is used to compress moving images.

Keyword

A word by which subjects can be searched on databases and online services.

MIME (Multipurpose Internet Mail Extensions)

MIME types are extensions to files that tell your computer what kind of program to use to view the file. Originally used for e-mail, MIME types are used by your Web browser to launch helper apps.

Modem

The communications device that transmits data between single computers, Internet servers, online services and BBSs.

MPEG (Motion Picture Experts Group)

An algorithm for compressing audio and video; not to be confused with Motion-JPEG.

MUD (multi-user dungeon)

A virtual environment in which multiple players contribute to a text-driven role-playing game.

Newsgroups

Internet message areas that serve communities with specific interests.

PDF (Portable Document Format)

A standard used by Adobe Acrobat to display any sort of document on any computer. Adobe Acrobat Reader is available at <http://www.adobe.com>.

QuickTime

A protocol used by operating systems to provide real-time video and audio capabilities.

RealAudio

A helper app that allows you to hear sound files over Web pages in real-time. Available at <http://www.realaudio.com>.

Search Engine

A utility that locates resources via searches for keywords and subject headers. Yahoo (<http://www.yahoo.com>) and Lycos (<http://lycos.cs.cmu.edu>) use search engines.

SLIP/PPP (Serial Line Internet Protocol/Point-to-Point Protocol)

Communications protocols used over serial lines that are necessary for your computer to dial in.

Smart Agent

A time- and energy-saving utility that scans various Internet resources, and collects files pertinent to your specific interests.

TCP/IP (Transmission Control Protocol /Internet Protocol)

This set of protocols makes Telnet, FTP, e-mail, and other services possible among computers that don't belong to the same network.

Telnet

These network protocols enable Telnet, FTP, e-mail, and other Internet services to work by creating the WAN (Wide Area Network) that is the Internet.

TIFF (Tag Image File Format)

A standard file format used for scanning, storing, and interchanging color and gray scale graphic images.

Unix

An operating system invented in 1969 at AT&T Bell Laboratories that was made available to researchers and students in 1973. It was used to develop the Internet's communication protocols.

URL (Uniform Resource Locator)

Describes the location and access method of a resource on the Internet. All Web sites have URLs.

Usenet

A network for distributing news items and messages; often referred to simply as newsgroups. See "newsgroups."

Veronica

A database that employs keywords and subject headers for information searches within Gopher space.

VRML (Virtual Reality Modeling Language)

An emerging standard that will let you model and move around in 3-D environments on the Internet.

WAIS (Wide Area Information Server)

A client/server information system that lets users search through databases with a single user interface.

WAV

One of the formats for Windows sound files. ■

BIZARRE SITE O' THE MONTH

<http://www.netgate.net/~ravenna/gotti.html>

Talk about a railroading: On April 2, 1992, John Gotti, a New York City plumbing parts salesman, was found guilty of 14 federal

A gun was involved, and someone died. But do a few youthful indiscretions make John Gotti the so-called *capo di tutti capi* of the so-called

like he's hiding a small one-bedroom cottage in the yoke of his \$1,800 tailored suit. Navigate further and you'll find many more photos (one that shows Gotti placing an old-world kiss on the cheek of an

associate is captioned, "Some girls have all the luck") as well as brief .WAV files from the mouth of Gotti himself.

The most intriguing content, however, arrives via a quick-and-nifty interactive Mafia-speak quiz, in which viewers are asked to decode FBI surveillance transcripts. Similarly, extended text passages

pulled from Bureau tapes are littered throughout the site. Here's Gotti on selfishness:

"I would be a billionaire if I was lookin' to be a selfish boss. That's not me... All I want is a good sandwich. You see this sandwich here? This tuna sandwich? That's all I want, a good sandwich."

Or, how about Ravenna's favorite quote, in which Gotti reflects on the forbidden term *La Cosa Nostra*:

"And from now on, I'm telling you, if a guy just so mentions 'La'... He just says 'La,' the guy, I'm gonna strangle the %\$!%\$!. You know what I mean? He don't have to say 'Cosa Nostra.' Just 'La' and they go."

Indeed, John Gotti, a kind and gentle man.

Ravenna, a 27-year-old vice president of a sheet metal shop, isn't just your typical mob fan who became enamored with the Mafia's — oh, shall we say... *charm* — after seeing "The Godfather." No, her appreciation of *goombata* runs much deeper. In a nutshell, John Gotti *is* not her father figure.

"He's witty. He's fun," she says. "He's an incredibly seductive man. He exudes power and demands respect. Yet, from what I've read, I believe he's also a caring and devoted husband, friend, and father. John Gotti is just really cute."

Ravenna says she updates her site "every waking moment." Future content will include more images, more .WAV files, a Mafia boss lineage chart, a Mafia slang dictionary, and a Mafia cookbook. Of particular interest will be a delicious recipe for *scungilli*, a Sicilian delicacy favored by old-timers. "It's conch meat," says Ravenna, "like from that conch shell the Brady Bunch were blowing in the Hawaii episode."

Ravenna says she plans to add "as much as I can get away with without getting myself in trouble."

"My roommate is convinced I'm going to get us both whacked," she says. "Stacy is my *consigliere* and lets me know when to pull it in a notch. My primary concern is to keep it off-beat and entertaining. It's still a very new page, so it's constantly expanding. I think I'll add a plumbing supplies page soon."

Hey, business is business. Two-to-one odds, Johnny Boy would understand. ■

THE JOHN GOTTI TRIBUTE PAGE

by Jon Phillips

Boss of Bosses? The Teflon Don?

charges ranging from racketeering to murder. A vindictive prosecution team had somehow tricked a jury into believing that the humble Gotti was in fact a vicious mob boss, and — get this — had ordered the assassination of Paul Castellano, another New York City entrepreneur.

John Gotti, a criminal? Please. Now, true enough, in his younger years, Gotti occasionally demonstrated what might be described as criminal behavior. Yes, there were the truck hijackings. And, yes, he was once involved in a bar fight.

"Gambino Crime Family," supposedly the largest of five so-called "Mafia" organizations that supposedly hold Gotham under siege?

People? Let's get real. John Gotti was a benevolent community elder, a saint among men. Just ask Ravenna (ravenna@netgate.net), proprietor of the John Gotti Tribute Page. With a playful wink and a knowing nod, Ravenna presents the *real* John Gotti, the pride of Little Italy, the man who every July 4th financed an Ozone Park block party with food and fireworks for all.

Upon entering the Tribute Page, visitors are greeted with a smiling image of The Dapper Don himself, a man who looks

People love John Gotti. Some live in New York City. Others, like Ravenna, live in cyberspace.

Jailbirds Buy Subscriptions Too

In her homage to John Gotti, Web mistress Ravenna has included a link to the online version of one of our nation's most unusual print magazines, *Prison Life* (<http://www.neosoft.com/plmag/>). This lifestyle journal, written by cons and ex-cons expressly for America's prison population, must be seen to be believed. Content ranges from weightlifting tips and grainy photos of tattoo art, to articles with titles like, "When It's O.K. to Snitch: A Convict Code For the 90s." While the magazine espouses a decidedly anti-violent, reform-oriented philosophy, it doesn't soften its honest study of prison culture. Check out Ravenna's favorite piece, a profile of Bruce Cutler, John Gotti's pitbull lawyer, who often "Brucified" prosecution witnesses, reducing them to trembling jelly.

Your link to a hidden prison culture.

Ah, Spring!

Well, will you look at this? My first anniversary at Imagine Publishing has passed successfully. This month also marks a

out of myself while singing a classic Carpenters tune.

But while avoiding karaoke nights does have its obvious benefits (I get to

middle of the screen. A click on the "sing now" button, and text starts scrolling across the screen, giving you the words on queue — and if the author of the site is really creative, there'll be a white ball bouncing along on top of the word that you're supposed to be singing. Hook up a mike to your sound board or sound-in port, turn up the speakers, and viola, instant personal desktop karaoke! To further enhance the experience, read the CU-SeeMe "how-to" I wrote up in the February issue of *The Net* (pages 69-70), and connect a Connectix QuickCam or other video-in peripheral to your computer and watch yourself perform! Whoa, even better yet, drop over to some CU-SeeMe reflector site, such as the Virtual Dorm (<http://www.taponline.com/tap/v-dorm.html> for more information), and entertain the world.

Netscape Navigator people, don't despair. Once Java applets are widespread among the common folk such as myself, netKaraoke will be a breeze. As a matter of fact, I've already talked to our Webmistress, Kathy, about setting up a WebRat Karaoke disco on *The Net's* site — with a spinning strobe light, bouncing mirror ball, and the WebRat in a white leisure suit.

WILL KARAOKE BE FAR BEHIND?

by Crystal Waters

year of successful avoidance of company karaoke nights at a local Japanese establishment that shall remain nameless to protect the innocent. It's not that I don't believe that karaoke is a well-respected

watch "Star Trek: Deep Space Nine," "Babylon 5," and/or "Friends" on Thursdays), it suddenly hit me the other day as I was writing about something a little more technically fact-laden that if I want to keep up with the times and corporate America, then I may have to bite the bullet and

start practicing sucking down sake and hurling out some ditties. You see, when writing a comparison story about Web browsers, it struck me that Microsoft's Internet Explorer 2.0 is... yes, really... *karaoke-ready*.

According to the Pro•Sing Karaoke Information Server (<http://www.karaokeusa.com/index.html>), karaoke is a Japanese word best translated as "empty orchestra." The Web, therefore, is a perfect place to store tons of empty soundtracks. And imagine this on your Microsoft Internet Explorer screen: the melody of "Lucy In The Sky with Diamonds" playing in the background as an inline QuickTime video of

dancers in aerobic athletic shorts with y-back thongs do a chorus line sort of thing in the

The KARAOKE PAGE

recreational activity; I passionately support its position as an unmatched interactive multimedia performance art form.

I just have this thing about singing in front of a group of strangers (and I have proof that the more sake my co-workers drink, the stranger they get) who are waiting for me to make a complete ass

Kooky Karaoke Sites

The Karaoke Page

<http://www.servtech.com/public/sobeit/karaoke.html>

Anywhere you travel, it seems, there's a karaoke stop along the way. The Karaoke Page's listings are sparse, but you'll get club names and nights on which karaoke fests take place. This site also plays host to the Barry Manilow Page (<http://www.servtech.com/public/sobeit/barry/barry.html>). I haven't been able to bring myself to actually click on the link, however.

Pro•Sing Karaoke Information Page

<http://www.karaokeusa.com/index.html>

Besides the listings of consumer and professional karaoke equipment, and listings of video, CD+G (CD plus graphics music CDs), and other supplies, the Pro•Sing Karaoke Information Page also houses the Karaoke FAQ (Frequently Asked Questions) and a Glossary of Karaoke Terms. Wander about for information, or order products from the company.

Karaoke WOW!

<http://www.primenet.com/~karaoke/welcome.html>

Along with some basic information about the sport of karaoke, Karaoke WOW!, "The Internet Karaoke Store," basically serves as an online catalog for karaoke laser discs and CD+G discs.

Besides product listings, Karaoke WOW! offers links to other karaoke sites.

Computer Karaoke Homepage

<http://www.teleport.com/~labrat/karaoke.htm>

This listing wouldn't be complete without mentioning this page, especially since its authors have tons of music files available for download for playing karaoke on your computer. If you don't know how to set up and play MIDI files, the Computer Karaoke Homepage gives tips as well as supplies player applications for DOS, Windows, Mac, and Amiga computers. ■

SPECIAL:

Gastronomic Delights
on the Net

96

We look at three criteria when we review a Web site, and assign icons to show you how the site measures up:

CONTENT

How much content is there, and of what quality? Is there enough to satisfy someone interested in this topic and seeking to learn more about it? Is the content good enough to keep you coming back?

 **Rich in content**

 **Fair amount of content**

 **Needs more content**

AESTHETIC MERIT

How attractive is the site? Though prettiness can't usually stand on its own, the layout is important. Does it pull the viewer in? Does it excite your interest? Does it make you want to come back?

 **A visual 10!**

 **Appealing, not great**

 **A dog**

TECHNOLOGICAL SMARTNESS

How well-constructed is the site? Are there effective navigational tools? To what extent does the site integrate Web technologies like animation, tables, colored backgrounds, custom horizontal rules, etc.? Does the site creatively work around HTML conventions?

 **Rocket science material**

 **Not stupid**

 **Needs a brain**

The best sites we've found are named Sites of the Month. Look for the icon at the right to help identify these sites.

The Internet is growing by leaps and bounds, and it's hard to know exactly where to go when you hop on. At *The Net*, we spend our days researching the net, zipping from here to there, checking out the latest and the greatest.

We've created our Sitings Internet Directory to help filter the net. It will point to places of interest and explain what's of most value there, and, if necessary, what not to waste your precious online time on.

Our Sitings reviewers are both curators and explorers. They're charting the unfamiliar terrain and sorting through the best and worst of what they've found each month. We've asked them to assign overall letter grades (the familiar A-F hierarchy) to the sites, as well as assess them according to three criteria.

And, each month, we pick a subject and do an exhaustive search on it.

This month, the subject is gastronomic delights on the net. Feast on it!

911 Gallery Home Page

http://www.iquest.net/911/lq_911.html

In case of an artistic emergency, go directly to the 911 Gallery Home Page. The 911 Gallery specializes in digital art: computer graphics, video, and electronic music. Delight your eyeballs by staring into portraits of cyber condors and fractal fish. Play with the interactive paintings hanging on the walls of 3-D rooms. Witness an artist's search for her identity within scratchy portraits of home life in Palestine. Dialing the 911 Gallery will save you from the horrors of visual boredom. —BJB

net rating:

AIGAlink virtual gallery

<http://www.dol.com/AIGA/door.html>

Wonderful. The American Institute of Graphic Arts has developed a beautiful, well-constructed Web site that walks you through a graphics arts exhibition in Philadelphia. Click your way through three rooms (more are expected soon) of outstanding projects, from interior signage to advertisement posters. And fear not: high-resolution graphics won't clog your bandwidth. The images are appropriately compressed to load quickly and maintain high quality. —LS

net rating:    overall: **A**

Art Deco-Erté Museum

<http://www.webcom.com/~tuazon/ajarts/erte.html>

Having created his first successful costume design at the age of five, Erté went on to become one of the foremost fashion designers of the early twentieth century. The Art Deco Erté Museum displays some of Erté's most famous designs for the Folies-Bergère in Paris, including a costume for the Diamond in "Les Pierres Précieuses" and a silver lamé costume, complete with pearl wings and ebony-plumed cap, that Erté himself wore to a ball. A Web site never looked so fashionable. —BJB

net rating:    overall: **A**

ArtServe, Art & Architecture

<http://rubens.anu.edu.au/>

This is rated as one of Point Survey's Top 5% of all Web sites. Although that little purple star logo has become a joke

among Internet users (it's about as rare as the tenth America Online disk you've gotten for free this month), this site might actually deserve the award — at least in terms of content. It's a huge, searchable (by period, subject, or title of work) database of art and architecture that's 16,000 images thick. The organization is a little difficult to follow at times, but considering the amazing amount of resources archived, it's pretty good. —SK

net rating:    overall: **A**

AS220

<http://www.ids.net/~as220/home.html>

The creator of this bold, blinking space, AS220, is a non-profit Rhode Island organization for the arts. It's taken its off-line community by storm with a local

cafe, a publicly accessible darkroom, youth arts conferences, and more. The cyber companion unfortunately doesn't beam with the same ambition. It's merely one step above an advertisement for the real-life services, along with local resources, links to artsy sites, and some tech talk. If you poke around long enough, though, you'll find some nice artwork. —SK

Barcelona Pavilion

http://www.auckland.ac.nz/arch/mats/barcelona/01_2.html

Six months ago, this was little more than a series of photographs of the Barcelona Pavilion — an exhibition designed by Mies Van Der Rohe for the 1929 World's Exhibition — linked together to create the illusion of a 3D space. It was a creative way to explore a modern architectural masterpiece. But since then, the creators have added QuickTime VR (download the demo; it's a heavy 2.8MB but worth it), a smoother layout, and a place for tourists to post and read comments. You won't find much actual information about the exhibition or Mies. It's purely aesthetics — and well done. —SK

overall: A

CENTRIPEDUS CENTER SEEKING ART

<http://www.centripedus.com/>

Artists aren't well-known for their ability to act coherently, and the Centripedus Center Seeking Art Web site won't shatter this notion. On the surface, the site appears to be an avant-garde commercial page, but the more you sink into the center, the more you'll realize you're inside a chaotic mess of political and philosophical diatribes about Christianity and capitalism. The site proudly promotes online art revolutions and various Web projects, including the promotional art for the movie *The Net*. —B/J

net rating: ☹️ 😊 ⚡

overall: A+

dalilink.html

<http://www.mercon.com/mercon/carl/dali-sur.html>

Melting clocks and broken telephones decorate Salvador Dali's surrealist art for reasons other than shock value. Dalilink, the home page for this unusual artist, traces how events in Dali's life — among them, a meeting with Sigmund Freud and a narrow escape from the Nazi invasion of France — got translated in his art. The site has plenty of links to other Dali-obsessed pages and museum exhibits. Dalilink offers an Internet refuge for this madman who was not mad. —B/J

Goya

<http://www.primenet.com/~image1/goya/goya.html>

Francisco Goya led classical painting into

Favela

<http://www.favela.org/intro/main.html>

I'm in love with this site. It is living art. It is pages and pages of ethereal transcription. It is a journey through minds of all origins and politics that are often silenced. It is a voice for inspired artists, writers, film makers, and self-proclaimed visionaries. (One look at the guest book will verify there are many Internet travelers who share this opinion.)

At the same time, its direct, political, confrontational nature ignites realistic horror. The content moves us through an all-too-close look at the declining state of human affairs — racism, ethnocentrism, sexism, and hate. Its haunting perspective is nonetheless appreciated, as too few are willing to walk this line of open expression about our present social condition.

Favela is a collective/collaborative organization of seven members who do not use the standard "staff model" of hierarchical positions — editor, art director, assistant, etc. The site went live on the midnight between Halloween and Dia de Los Muertos (Day of the Dead), and throughout, it symbolically emphasizes its relationship to this haunting moment of the year. There's also sym-

bolism in the subject/index headings, titled Visible Frenzy, Rabid Sphinx, Meat Locker, Detonation Slate, and Shooting Range. Within these areas, you'll find origi-

the modern world with a unique and ever-changing style. This site, devoted to the works of Goya, is also unique. It lacks the typical barrage of hyperlinks to miscellaneous Web resources, feedback loops, and advertisements. Instead, it's a stunning display of the artist's works. Each page is accompanied by a well-written biographical note. The works are presented in chronological order to demonstrate Goya's evolution — he lost his hearing in 1792, after which his paintings took on an increasing aura of dark despondence. Well done. —KV

net rating: ☹️ 😊 ⚡

overall: A

nal artwork, political and social essays, creative writing, and a "coming soon" ubiquitous link page.

Favela's members describe their approach as "cross-cultural, cross-generational, and cross-gender. We are invested in using technology and communication for cultural production on the Internet. We act as architects of a context for free play between individuals invested in aesthetics, ideas, and social content." On the technical side, the creators are masters of HTML using BBEdit. They script their own C and Perl code,

use Macs for content creation, and employ a Sun Internet Server to power the site. This write-up is heavy in tone because the site is heavy in essence and only recommended for those who have

heart to think freely and explore the ideas of others. I almost feel that to use the usual "out-standing graphics" and "high-density content" ratings for Favela would do little to describe the inspiration I felt when browsing, no, pouring over this site. It is beyond a doubt the most moving, aesthetically pleasing, and thought-provoking Web creation I have seen thus far. I hope that this review encourages you to visit the site. I guarantee it will be worth your time. —SK

Vintage Ink & Paint

<http://www.earthlink.net/~sworth/>

There certainly is a vast amount of information here, though you'll have to take a nap on the scroll bar to get it. Yes, it's another page of infinite length. Despite this slight annoyance, the remaining layout is easy to read and the content is good. Visitors learn about collecting animation art, as well as how and where to purchase it. They also can search a glossary of animation-related terms and learn about restoration processes. Valuable for collectors. —LS

net rating: ☹️ 😊 ⚡ overall: B

VIRTUAL GALLERY

<http://oroppas.sec.or.jp/Gallery/GALLERY2.html>

This is a great site for casual image browsing. If you want to see pictures of artwork from Japan, there are hundreds to choose from here. The pictures span most mediums — painting, printing, sculpture, architecture, and design. Equally impressive is the kids' gallery, which is organized by subject categories: monsters, animals, parents, etc. There's also an open call for kids to submit artwork, so get your budding Van Goghs started now. The site is translated in both English and Japanese, for an oh-so-international effect. It's extremely well done. —SK

net rating: ☹️ 😊 ⚡ overall: A

WEBSTOCK

<http://ching.com/>

First there was Woodstock, then Wigstock, now Webstock. As a virtual art colony in Cyberia, Webstock promotes alternative art, music, and philosophy. Discover "the sound sculptures" or lap drums of composer Ken Lovelett. Ponder the significance of artist Justin Love's portraits of two black cats eating watermelon. Or read about brain simulators, astrology, Lake Klamath Blue Green Algae, and WomanStock. Webstock would make any Zippy proud to hold up the peace sign in cyberspace. —BJB

net rating: ☹️ 😊 ⚡ overall: A-

Welcome to Cyberlab 7

<http://www.well.com/user/tcircus/Cyberlab7/index.html>

Art for the Millennium. Well, it could have been good. It starts off with a sharp, new agey, dreamy logo and a pitch about blending art and technology. There are lofty headings — Visual Realities, Millennium Events, and Planet Change Projects. The problem is that not one of the interactive video clips or links to events or "projects" went anywhere beyond an error 404 (File Not Found.) I must ask: Are our Millennium prophets slacking, or are they just a mess at using HTML? —SK

Panic Encyclopedia

http://128.2.19.107/ctheory/panic/panic_contents.html

The Panic Encyclopedia describes itself as the "definitive guide to the postmodern scene," but this site has an outdated and heavy-handed feel.

Even if you drop a Baudrillard reference into every conversation, or still think semiotics are a badge of hipness, this tedious site will put you to sleep faster than a "Herman's Head" reunion show. Taken from a 1989 book, this postmodern cyber tome feels outdated, with its copious references to Oliver North and Jim Baker. Even poor Elvis is dissected as a Jungian archetype. If I wanted to read this kind of stuff, I could get a Master's Degree. —MP

Pigeons: Amiable Urbanites

http://www.envirolink.org/arrs/peta/factsheets/wildlife/wil6_pigeons.html
Pigeon facts, brought to you by the People for the Ethical Treatment of Animals. The site begins with the heart-tugging story of Cher Ami, the heroic pigeon, then attempts to clear up the bad rap that "rock doves" (or "flying rats," depending on your sensibilities) have gotten regarding disease. It also discusses humane methods to keep them from nesting in buildings. The PETA folks do great outreach for all mistreated critters, and here they prove they don't play favorites by championing just the cuter animals. I hope they draw the line at cockroaches, however. —RR

Spies Surveillance Privacy Personal Protection

<http://www.spyzone.com/>
Do you need a factory-fresh REMOTE CONTROLLED SURVEILLANCE SUB for clandestine underwater bikini shots? Or perhaps a USED ARMORED CAR for those family vacations in Belfast or Beirut? If you have a few hundred thousand dollars burning a hole in your pocket, this is the place to go. The organization of the site, however, leaves a bit to be desired. It takes a while to find pictures of the cool spy stuff, and the product information is a bit spotty. —MP

net rating: 🍷 😊 🌟 overall: B

The Feeble Gourmet

<http://nosferatu.nas.nasa.gov/~rat/gourmet/>
Karl Schilke, aka rAT, has generously detailed every workday lunch since April 18, 1995, including where, what he ate, and notes on the meal. Discover that on 4/24/95 the "lemon sauce [was] very tangy and fresh" at the Golden Wok, but on 5/8/95 at the same restaurant, he

"felt slightly sick and was unable to finish poststickers." The Lunchability Index shows the overall percentage each restaurant has been frequented by him to date. Funny and meticulous detailing, though I wish he had included the address of the Old Country Deli, which rated a bonus "YUM!" several times. —RR

net rating: 🍷 😊 🌟 overall: A

The Lipstick Page

<http://www.wineasy.se/bjorn/lip.html>
A library of lipstick information and trivia. Different brands are listed, some with color samples. French products are thoughtfully tagged, so you can avoid buying them to protest France's penchant for nuking coral reefs. Makeup tips and consumer forum have practical information for beginners and experts alike. Kind of cute and it's laid out well, but it's not weird enough to be truly interesting, and not in-depth enough if you have a serious lipstick jones. It's still in progress, but for now, kiss it off. —RR

net rating: 🍷 😊 🌟 overall: C

The Winkie Gallery

<http://www.jazzie.com/winkies/winkie3.html>
The Winkies are triangular cartoon characters taken from an old computer game. The Winkie Gallery is filled with

The Egyptian Winkie, shown here, is a long-lost relation of the Winkies.

various artistic renditions of these "loveable" space aliens: a Winkie with an axe, a Winkie in love, etc. It's nicely put together, with small images linked to larger GIFs. The main problem is that the Winkies themselves are annoying. If you like cutsey humor, you'll probably fall in love with these denizens. But I wonder why the Exon Amendment couldn't censor this stuff. —MP

net rating: 🍷 😊 🌟 overall: B-

Todd's Gallery of Pathetic Human Regret

<http://www.eden.com/~tfast/regret1.html>
Todd exposes his own closeted skeletons and airs dirty linen. Categorized lists of personal regrets from childhood through high school (with the college years soon to come) include not sticking up for friends when he had the chance, believing a science teacher was genius, and being unable to convince pals the nearby woods were haunted by invisible dinosaurs. However, Todd's biggest regret is having contact with stupidity. The site is easy to navigate, and easy on the eyes, too. Equal parts confession and rant, this is a well-written and funny self-portrait. —RR

Virtual Kissing Booth

<http://www.whitehawk.com/vkb/>
Each time you enter the virtual "kissing booth," you're greeted by a different photo of a wholesome girl and wacky caption underneath. I assume the next step is to smooch your monitor. MMM-MMMM! Since my monitor tastes more like chicken than a girl, the novelty wore off quickly. Oddly, in none of the pictures I encountered were the girls even puckering up, and most of the photos look like head shots from a second-rate casting office. Fortunately they are attempting to recruit some new models. With some more variety, this could be an entertaining place. —MP

net rating: 🍷 😊 🌟 overall: B-

Welcome to Passport Online

<http://www.passport.ca/>
Passport Online touts itself as Toronto's biggest service provider. Its home page is mostly promotional junk for its service, but down at the bottom of the page is a tiny hidden treasure: Dyslexicon!, a Web-accessible MOO-like chat area. What makes it so special? The place is crawling with Canadians. Pretend you're a lumberjack from Quebec and only speak in a French accent! Bait Canadians by asking them what state they live in! A small diversion for the terminally bored. —MP

net rating: 🍷 😊 🌟 overall: C+

1st Steps Cool Marketing Resources and Tools

<http://www.interbiznet.com/ibn/nomad.html>
A diamond in the rough, Internet Business Network has scanned the Web for info on Web-marketing and selling, and critiqued sites for marketing savvy. It comes up short on information design, though: the newsbits, tips, and links are buried in tiny type by date — fairly meaningless for categorization. If you're interested in developing a business Web site, or marketing your stuff online, you'll find a few good ideas and links embedded here. —KW

net rating: 🍷 😊 🌟 overall: C

1st Steps links you to sites that are models for businesses that want to go online. One it's particularly impressed with is Tripod (<http://www.tripod.com/>), a zine geared to GenXers.

MarketPlace

<http://www.mktplace.com/home1045/>

If you like business analysis or aren't shy about sending contact info to marketers, MarketPlace might be for you. It's a front page for a Dun and Bradstreet CD-ROM offering market research by industry, a national directory of service businesses, and other business research tools. You must register (for free) to access the database. Pull up "eating places/restaurants," for example, to get the estimated number in the U.S., annual sales, number employed, and company size, location, and specialty data. The information isn't dated or referenced, so you might want to take it with a grain of salt: current. —KW

net rating: ☹️ 😊 overall: C+

Netresource.com Home
<http://www.netresource.com/>

Remember the joke about consultants? They borrow your watch to tell you what time it is. Netresource is kind of like that — a Web marketing consultant whose site is virtually all links to pages it's created for clients. The only value here is a serviceable article about the pros and cons of marketing on the Internet. You can have a memorable Catch-22 experience at the search button, which instructs you to "enter a search pattern," which in turn leads you to the command, "enter a search string." Never did find out what I should search for. —KW

net rating: ☹️ 😊 overall: C-

Results Unlimited Helps You Do More Business With Less Effort

<http://www.widdl.com/results/>

What were the creators thinking? There's less text here than on a bus ad — and zero value. Apparently, these folks want to sell you marketing consulting and training services, and, of course, videos. The links go to a paragraph or two of teaser copy: "If you'd like to do more business with less effort, you can either sell more or reduce your cost of doing business." And hey — Results Unlimited can work with you on both. Just send e-mail. What's really unlimited here is lameness. —KW

net rating: ☹️ 😊 overall: F

Welcome to Access Business Online
<http://www.clickit.com/touch/home.htm>

It's image map city at Access Business Online, which epitomizes entrepreneurialism on the Web at its most overblown.

The site promotes business self-help books and videos, canned how-to-ask-for-more-money articles, and a few links outside to daily news sources. There's an ever-present, very busy-looking grid to "guide" you through clips and product pitches. For all the elaborate front-end, it's not a smart guide. Too bad Access Business Online doesn't follow its own quote-to-live-by: "Do one thing. Do it well. Do it better than anyone else. Do it for less." —KW

net rating: ☹️ 😊 overall: D+

Amiga Technologies Homepage

<http://www.AMIGA.de/>

They still make Amigas? That's about all I learned here. It doesn't get any more basic than this. No fancy graphics, not much text, few links (not that there are a lot of other Amiga sites to link to). Some parts are only in German, but I doubt non-speakers are missing much. I did learn that the Amiga "is the first choice of graphics professionals." Yeah, sure. If you're an Amiga fan or owner, you probably don't have a lot of sites to choose from, but for the other 99.9 percent of the population, stay away. —BB

net rating: ☹️ 😊 overall: D-

Apple Computer

<http://www.apple.com/>

I'm a big Apple fan, so I expected a lot from this site. I found it had very solid, in-depth information about Apple and its programs. But after looking around for an hour, I felt something was missing: style. The site is just plain dry. True, there's a good support section, lots of ra-ra Apple info, and a nice special exhibit containing excellent pictures and extensive annotation. Don't miss the "Open Doc" section in the technologies and research area; if you have the time and bandwidth, download the example. But all of this needs to be better presented. —BB

net rating: ☹️ 😊 overall: B

Citicorp Citibank Home Page

<http://www.citibank.com/>

Too bad Citibank didn't spend as much energy on its front-end home page (boring, boring, boring) as it did on the product/service pages or credit card information page (very well done). They weren't accepting online credit card applications when I last checked, but it's a possibility by the time you read this. They also have student loan information (which you can apply for online, though heed the warning — it's not secure yet.) Also of use is the searchable database of Citibank branches worldwide — just in case you need a cash advance from Argentina. —SK

Corbis

<http://www.corbis.com/>

Sony Online

<http://www.sony.com/>

Instead of taking several months to give Sony several different Site of the Month awards — music, gaming, film, etc. — for its amazing Web site, I thought it would be more efficient to mix it all together and

name Sony as the best "corporate" site of the month. Know in advance that it is superb in all the aforementioned entertainment arenas.

The "Music" section offers sound and video clips of featured artists (the offerings regularly rotate to avoid redundancy), tour information, online catalogs with stuff to buy, like T-shirts, posters, etc. (though there's no online ordering yet), and an updated news area — for all the fresh gossip. Actually, most of the news is PR material, but it's entertaining. Sony also sponsors at least two, sometimes three, live chats via America Online (Keyword: live) each month with Sony recording artists — with transcripts available on the Sony Web site.

The "Pictures" section traverses through cinema, video, and television, highlighting established, specially featured, and upcoming projects to keep you current and well-informed. There's a listing of how to find a Sony theater near you, as well as what might be playing there. When I last checked the site, the newest movie addition was *Jumanji*, a feature film starring Robin Williams. The site for this one movie was several pages thick, with "behind-the-scenes" interviews and profiles, video clips, and an online contest to win merchandise.

And let's talk interactive. Yup. The gaming industry's little media darling, the Sony PlayStation, has a home of its own on the Sony Interactive site, complete with game updates and all the technical specifications to leave bits-and-bytes types drooling. Sony also has screen savers here, and every now and then offers a free one! And, though all of these areas have their own separate catalogs, there's a monster behemoth catalog in the "On Gear" section, should you want to purchase more Sony merchandise... Be prepared to spend a lot of time here, especially if you're heavy into entertainment culture. The graphics are smooth, the layout is easy to navigate, and the content is never ending. —SK

net rating: ☹️ 😊 overall: A+

Excellent. I could spend an entire day at this site, an enormous, well-organized archive of images, many available in high resolution. Especially worthwhile is the Almanac under the Corbis Media section. The Gallery Plan in the Gallery section is done so well I forgot it's useless. You can set up an account that somewhat personalizes your home page

Corbis uses a beautifully designed image map to guide you through the site.

screen to account for your bandwidth and interests. The hi-res images are encrypted, so you have to download their viewer to access them. It always gives me a warm feeling to know that Bill Gates (founder of Corbis) is vigilantly protecting our copyright laws. —BB

net rating: overall: **A**

Eastman Kodak Company

<http://www.kodak.com/>

Dang, it's slow! There's plenty of information and nice enough graphics here if you can stand the wait. Search through heaps of press releases, corporate data (mission, background info, etc.), and photography tips, or enter one of the scheduled live chats with a professional photographer. (Transcripts are available, too, for those who missed the chats.) But if you aren't a photographer or fanatical about Kodak, I can't really think of many reasons for you to visit the site. It's just O.K. —SK

net rating: overall: **C+**

MasterCard International Pointers

<http://www.mastercard.com/>

Here's an example of how to keep a corporate site interesting. Sure, Mastercard will bombard you with company information and, of course, an opportunity to apply for a credit card (online in several countries). But Mastercard ups the ante a bit and adds in a hot spot link — complete with clever quotes, contests, a story archive, and an interesting article about secure online transactions (to ease paranoia and spread a little education). It's not a super-fancy-looking site, but it's pretty enough, and the content value certainly is high enough to create a nice balance. —SK

net rating: overall: **A**

MCA UNIVERSAL CYBERWALK

<http://www.mca.com/>

In its usual fashion, MCA/Universal has given an impression of substance to

almost non-existent content. I found myself spending 20 minutes trying to figure out the impressive-looking home video library, only to realize there were only images of videocassette covers surrounded by lots of useless buttons. The site does boast some movie clips and actual information about many of their books in the Putnam/Berkeley section, but the music and film sections are quite bare. Overall, you have to search through a lot of fluff to find a very moderate amount of substance. —BB

net rating: overall: **C+**

MCI

<http://www.mci.com/>

MCI has an outstanding site. It's huge, with everything from news releases (updated very regularly) and long-distance information to entertainment, customer service, and online paging capabilities. Yes, you can page someone with an MCI or Skytel pager from the Internet — it's easy. The graphics are great (and not bandwidth bandits), and the content is well-organized. While you're browsing, link to InternetMCI (<http://www.internetmci.com>), which houses all the fashion, entertainment, and misc. fun stuff. —SK

net rating: overall: **A+**

Merrill Lynch

<http://www.ml.com/>

Merrill Lynch has fallen into the trap of thinking that having a Web site is enough; if you build it, they will come. This site could have been developed as a great resource to investors and planners. Instead, the homepage has lots of investment buzz words linked to a 250-word statistics-laden info sheet that, in turn, is linked to a form for visitors to fill out. Merrill Lynch uses the info from the form to s-mail glossy advertisements. If you're looking for Merrill Lynch brochures, this is the place for you. For anything else, look elsewhere. —BB

net rating: overall: **D+**

Microsoft Corporation

<http://www.microsoft.com/>

I was expecting quantity and quality from Microsoft's site. I got the former. There's an incredible amount of information here, all extremely well-organized. You can get an outline of the entire site, or more detailed outlines of parts of it. Alternately, the entire site can be searched with a good search engine. Perhaps best of all, Uncle Bill discourses on the office and school of the future. The graphics are pretty dull image maps, although the forms are cool and the pseudo pull-down menus in the support section are kind of interesting, though a bit silly. —BB

net rating: overall: **A-**

OZ Interactive Inc

<http://www.oz.is/OZ-Interactive/Welcome.html>

The OZ site is a feast for the eyes, though it's somewhat slow to load.

This imaging company, a leader in computer graphics, seems very interested in VRML (Virtual Reality Markup Language). There's not a whole lot at this site yet, but it's very nice-looking and there are some interesting things coming. They have a VRML gallery already, and are working on a VR record store. The plans for it are laid-out, and are worth a look now if you're interested in Icelandic computer graphics. Definitely bookmark it for later reading; it could be a fascinating site, especially if you have a VRML reader. —BB

net rating: overall: **B-**

Pacific Bell Web HomePage

<http://www.pacbell.com/>

Well, Pac Bell isn't going to win any design awards, though the graphics are fine. They probably won't win any content or net smartness awards, either. But it's an all right site if you want information on products and telephone rates for the west coast. The press release database is pretty current (and interesting, as Pac Bell has its hands in many things related to the Internet), and it's searchable — thus saving the Web site from total review annihilation. —SK

net rating: overall: **C**

Sirius Connections

<http://www.sirius.com/>

This is a nice Web site. "Nice" is the most appropriate word since it's neither spectacular nor lacking, but covers the bases of its business well. Sirius, an Internet access provider for the San Francisco Bay Area, includes all the necessary information about its services. You'll find out about prices, files, account types available, and online registering. There's a reference/help desk for technical and service-related questions. Also, the site looks good, with tasteful icons and a smooth layout. No gimmicks. No frills. Just good and solid. —SK

net rating: overall: **A**

The IBM world wide web home page

<http://www.ibm.com/>

This is kind of your standard corporate page. The support section is very extensive. The IBM plugs are ever-present. The Stretch (just for fun) section is surprisingly good. IBM has also done a very nice job of integrating its "Solutions for a Small Planet" campaign with the Web. There's not much reason to go here unless you just happen to be a Big Blue developer or fan (does IBM have fans?), or a stock investor, but it's a very solid site. —BB

net rating: overall: **B+**

Welcome to Bulldog

<http://bulldog.ca/>

This group is very fond of itself. There are some interesting pictures here, and the video is somewhat interesting, though it may take you an hour or more to download it. Overall, though, the site is quite dull and lacks much information. Want to take an extensive photo tour of Bulldog's office? I didn't either. But I did find out that the CEO is a new media genius, wine expert, and gourmet cook. Who cares? I found myself saying that a lot. —BB

net rating: overall: **C-**

Welcome to Macromedia

<http://www.macromedia.com/>

For people who use Macromedia products, this is a very good site. There's a good range of software and plug-ins for use with Macromedia products. There's also a wide range of items, such as industry gossip and demos, that would be of interest to multimedia aficionados. There isn't a great amount of depth to the material, but hopefully, it will fill in over time. Perhaps the coolest feature is the ability to download a file of bookmarks for the Macromedia site that you can import into your browser. —BB

net rating: overall: **B**

Welcome to NutraSweet

<http://www.nutrasweet.com/>

NutraSweet, indeed, has a sweet site. It's loaded with health tips, a news area

A charming virtual village is the guiding concept behind the NutraSweet site.

(though it wasn't quite finished when I last checked), a library, which is actually a reference shelf for NutraSweet-related questions, and a market place to distribute NutraSweet-enhanced recipes (yes, cakes, cookies, and pies, guilt-free). And the super bonus: If you enter in your personal data — age, gender, activity level — you'll receive in reply a custom calorie/nutrition recommendation chart. The graphics are great, and you'll never guess who's starring as the site's mascot — Mr. Magoo! Very clever. —SK

net rating: overall: **A**

Winterland World's Greatest T-Shirts

<http://www.mca.com/winterland/index.html>

Winterland has all the flavors in concert T-shirts, from The Beastie Boys to Hole to Pantera. The Web site has great graphics and a smart layout, but unfortunately, it doesn't do such a great job showing off the merchandise. The site only displays one shirt for each artist, even though in the paper catalog, several shirts are listed for each band. (Did

CONTENT	AESTHETIC MERIT	TECHNO SMARTNESS
Rich in content	A visual 10!	Rocket science material
Fair amount of content	Appealing, not great	Not stupid
Needs more content	A dog	Needs a brain

Lion's Den

<http://www.mgmua.com/>

Slick. Very very slick. Each and every page of the movie maven MGM is a well-designed, well-organized near-masterpiece. The graphics appear to be high-res, but take only moments to appear, and when they do, they seem to flow instead of blur (adding a nice sheen to the creation). MGM covers the spectrum well, with information on the motion pictures, television, video, and interactive projects that it produces and sponsors. There is also some background data on the corporate history of MGM and its executives. Oh yes, and don't forget the "Studio Store." With official T-shirts, crew bomber jackets, mugs, and polo shirts, it's as fun as any Hard Rock cafe, and there are no lines! (Though the site warns that it is not secure yet and that MGM will not take responsibility for any transaction problems. You might want to wait a few months before ordering stuff.)

The site's treatment of current and upcoming movies is well-executed. Besides the usual sound, video, and still clips, MGM has interviews with main characters, reviews from national journalists, and phenomenal graphics. Meet the directors, too! I was especially impressed with MGM's treatment of the movie *Leaving Las*

Vegas: This area featured interviews with both Nicholas Cage and his character, the estranged alcoholic and lovelorn Ben.

MGM's also done a nice job of promoting its successful television show, "The Outer Limits," and this area is probably the most impressive aspect of the site. It's creative, a bit more interactive, and offers episode profiles and features so that active fans can stay current and also glimpse the future. And, super-kudos to the animated eye ball! If you enter the rock (no secrets revealed here, you'll have to visit to see what I mean), you could win "Outer Limits"-related prizes! Contests are always tasty bait. Monster fans should take note that the monster gallery is indeed worth serious attention, with still clips of creatures that have graced the set of "Outer Limits." Clever. Captivating. And while you're lurking around the site, stop in to the dialog area and exchange "thought-provoking" ideas, not necessarily about "Outer Limits." Overall, MGM is informative, rich in content, and worth frequent visits from Hollywood movie go-ers. —SK

net rating: overall: **A**

they run out of space or time?) So, it's not very complete compared to what they actually offer. And yes, you guessed it, no secure transactions yet. Call the 800 number to order. —SK

net rating: overall: **B-**

Audrey Hepburn

<http://grove.ufl.edu/~flask/Hepburn.html>

I must admit that my knowledge of Audrey Hepburn is rather limited; I recall that she starred in the shallow film adaptation of "Breakfast at Tiffany's," and I suspect she might be related to Katherine Hepburn. This site features a collection of quotes by the famous extolling the virtues of being Audrey. In addition, several of her movies are spotlighted, and links to other Audrey hot spots are available. Most amusing are Audrey's remarks on Audrey — only a genius could manufacture such banal insights and observations. —SS

net rating: overall: **B-**

Chicago International Film Festival

<http://www.ddbn.com/filmfest/one.html>

Strong, intuitive graphics lead you to useful and specific information about the Chicago International Film Festival. For instance, you can learn what's playing on a particular day, where the different shows are, what time they start, and what each film is about. The highlight of the site is a poster gallery of black-and-white photos, mostly by Skrebneski, of glamorous naked people who have muscular bodies. There are also QuickTime movies to download. If you're a filmmaker, you can get an entry form; if not, there are coffee mugs and T-shirts in the gift shop. —KB

net rating: overall: **A**

Cinevista Videos: An Excellent Selection of Foreign Films From Around the World

<http://www.gayweb.com/112/112home.html>

The American film industry is a global monster whose far-reaching influence often dwarves other film traditions. Video has improved the situation, but

most rental store stock is still overwhelmingly American. The Cinevista site, by contrast, offers a (smallish) selection of foreign films, with critical blurbs, plot summary, and running times. If a film appeals, you can order it online — provided you have a credit card and are willing to suspend legitimate security concerns. This is a simple, single-service site; its usefulness to the cinema lover will grow as the number of films offered increases. —SS

net rating: overall: **B-**

CineWEB

<http://www.cineweb.com/>

CineWEB is an online resource for video and film professionals. No matter what your equipment needs, I suspect this extensive index can put you in touch with just the right person. CineWEB has a BBS service that allows messages to be posted to other site visitors, and a \$69 fee will get your resume posted for one year. Online trade journals are promised. I found the location index most engaging. So, you want to shoot some scenes in a church? Well, they've got just the Unitarian setting for you — and such affordable rates! —SS

net rating: overall: **B**

Coen Brothers Homepage

<http://lasarto.cnde.iastate.edu/movies/cultshop/Movies/coen.html>

This is your typical fan site, dedicated to two of today's most innovative filmmakers. There are a few images from the films, trivia bits, and profiles of associated actors and directors. I was ready to write this off until I stumbled across one of the most amusing profile pieces I've seen, an Interactive Film Criticism™ that's a must-read for all Coen followers. Trust me — the piece makes the site worth visiting by anyone who has ever pondered the significance of "The Hat" in "Miller's Crossing." —SS

net rating: overall: **B**

Feminist Film Reviews

<http://www.inform.umd.edu:8080/EdRes/Topic/WomensStudies/FilmReviews>

The creators of this site look at films with a feminist perspective, which is very different from the ones you'll find in your Sunday paper's arts sections. No, these aren't man-hating rants (it's a sadly mistaken notion that feminists hate men). Instead, there are thoughtful,

The Feminist Film Reviews site pays homage to women in the movies; it opens with an image of Renee Falconetti in *The Passion of Joan of Arc*.

insightful, and encouraging film reviews, spanning the ranks from small art films to big-budget Hollywood. The aesthetics of the site leave something to be desired (it would take all of 15 minutes to add in some background colors and lose the ASCII type). But that aside, it's a great site. —SK

net rating: overall: **A-**

Gramercy Pictures

<http://www.polygram.com/polygram/film.html>

At Polygram's Gramercy Pictures page, you'll find a menu of current releases, coming attractions, and recent releases. Mostly, the films listed link to a page of short synopses and not much more. Gramercy's films must have gone over budget and the company couldn't afford to do much more. —KB

Hype Movie World Polls Surveys Reviews & Cool Links

<http://www.hype.com/movies/home.htm>

The strength of this site is not its polls or reviews, but its links and resources. There is a great link list called "The Mother List of All Film-Related Web Sites," which includes everything from Cannes, Sundance, and Berlin to the Lo Res Film and Video Festival in San Francisco. Entries are in Super 8, Hi-8, as well as Mac-based tools. Hype also does the Canadian Film Centre site, and has a related link to the Toronto International Film Group. These resources provide gobs of information about Canadian film culture. —KB

net rating: overall: **B**

James Bond Agent 007 OHMSS

<http://www.mcs.net/~klast/www/bond.html>

This site is a fine example of what the Web can become when someone with a fanatical devotion to an imaginary spy learns HTML. I found the amount of Bond-related information overwhelming: images, sounds, the films, actors, books, cars — and links to real-world espionage-related sites! You can even find the rules for the James Bond Drinking Game — illegal in Utah, kids. Some might argue the page creator has too much free time. I say, "Good for her!" In this passionless era, it gives me hope to learn someone is so clearly inspired. —SS

net rating: overall: **A**

Judy Davis

<http://gpu.srv.ualberta.ca/~jjay/judy.html>

Considering this data was pulled together by one person and then archived "just for the fun of it," the site is pretty good. It's valuable, at least to fans of actress Judy Davis, (*My Brilliant Career*, *Husbands and Wives*, *Impromptu*, and *Where Angels Fear To Tread* are among her more famous films). There's a picture and sound file gallery, lists of upcoming Judy Davis projects, and a live link to join the Judy Davis mailing list (which the Web site creator also maintains). It could be bigger, but everything could always be bigger. It's pretty good as is. —SK

net rating: overall: **B+**

Miramax Films

<http://www.miramax.com/>

The Miramax cafe on the Web is "open all night," and it features movie news, previews, and lots of prizes.

Miramax's role in the manufacture of culture guarantees an interesting site — its film collection is extensive and includes some of the most challenging works of the past decade. This site has blurbs and images from the latest offerings, faux-insider chat about the actors involved, and such. The heart of it is the Vault, which contains images and video from many of the Miramax films. I know too many people with a hard drive full of one-minute clips, and Miramax will only feed their sickness. The company has made an effort to give the Web surfer reason to visit again. —SS

More Barrymore Than Ever Before

<http://www4.ncsu.edu/eos/users/r/rfbatcho/www/drew/>

If you're up late in your dorm room eating rice cakes and Cheetos and have a thing for Miss Barrymore, this site may suffice. There are pictures of her in various sultry poses, ranging from a topless shot of her as a prepubescent in boxing gloves to Drew dressed up in a corset and hoop skirt. The best part is the site's link to David Woodward's Drew Page, a nicely structured site with icons and lots of content. The worst thing is the obnoxious blinking "UNDER CONSTRUCTION" and "COMING SOON" signs. —KB

net rating: overall: **A**

MovieLink 777FILM Online

<http://www.777film.com/>

MovieLink is a glimpse of the future, demonstrating how smoothly the Web can be integrated into daily life. If you

are lucky enough to live in one of the included cities, show times and places are online. Select your city and neighborhood, then search what's playing by genre, title, or location. Some theaters even allow you to buy tickets online — with a credit card, though the transaction is insecure. This is a great use of the Web, one whose value will increase as more cities are added to the database. —SS

Occasional Movie Reviews

<http://www.fcs.net/maclark/>

It's small, but the author has no qualms about this. On the front page, he states: "I write a review when I see a movie, and I see a movie when I feel like it. Low pressure, right?" The approximately 20 movie reviews here range from *Quiz Show* to *Howard's End*. They're well-written, and organized in the order in which the author saw them. The layout is also pretty nice. If you want a second opinion about a film, this might not be a bad place to check. —SK

net rating: overall: **B-**

Teen Movie Critic

<http://www.dreamagic.com/roger/teencritic.html>

I initially reacted with horror to this page. Cute kid learns HTML, puts up some movie reviews, mom and dad are proud, his 14 (!) siblings are proud, and Roger Ebert enters the picture — a recipe for disaster. Imagine my consternation when I found myself agreeing with the kid's reviews — he can be sharp, articulate, and insightful. Admittedly, the cute factor is high here: Profiles of various siblings were particularly upsetting to my jaded sensibilities. Still, I'm comfortable recommending this site to anyone wanting to peek in on the life of a 16-year-old movie lover. I like this kid. —SS

net rating: overall: **A-**

The Film Festivals Server

<http://cannes.zds.softway.worldnet.net/>

Like fashion, film has inspired a year-long circuit of shows, reviews, and non-stop partying around the globe. This site gives the unwashed masses a chance to intercept the latest buzz. Was Martin's latest work previewed in London? Who took best of show in Moscow? Major film festivals are covered, nominees and awards listed, and city guides are provided to facilitate day-dreaming. Ahh, I remember Ghent — how soothing I found the Veldstraat. —SS

net rating: overall: **B**

The Internet Movie Database at Mississippi US

<http://www.msstate.edu/Movies/>

This Mississippi State site really doesn't look very good, but that lends it an air of authority as an archive. I had some trouble at first using the search mechanism, but when I searched with less

characters in my string, I was successful. You can search for a whole variety of cast/crew members, as well as by character. You can find out that Charles Laughton, Trevor Howard, and Anthony Hopkins all played Captain Bligh in *Mutiny on the Bounty* and *The Bounty*. But then you would have to know how to spell Bligh. —KB

net rating: overall: **A-**

The Official Grade B Productions TM Homepage

<http://www.fsl.orst.edu/rogues/rosero/grade-b/grade-b.htm>

This site's a bit sketchy. There are a few glitches — pages that might not load, some that aren't quite finished. But gads, the pages that do work and that are complete are well worth it. These kids are cool, making films, writing their own scripts, playing all the parts themselves, and then exporting scenes and still clips (with captions) to the Internet. I can only assume they'll master HTML in time and get some super-great content up (maybe even by the time you read this.) Check it out! —SK

Washington University in St Louis

<http://www.wustl.edu/>

Washington University's Web pages have

Hyper-Trivia Challenge

http://www.hype.com/game_show/hyper.htm

Is it any wonder that one of the hottest Web games is based on one of the hottest TV game shows? Except in Hyper-Trivia Challenge, a Web version of "Jeopardy," everyone's a contestant, no one's a spectator. Actually, Hyper-Trivia Challenge has no affiliation with the TV show: You don't have to stress over time limits and having other

contestants beat you to the button; you don't have to worry about looking like a fool to a nationwide TV audience; and you don't get to win a lot of real money. Well, maybe the TV show has an advantage on that last part.

It's a pretty simple set-up. The first screen asks you to register, which entails you entering a name that can be put in the Hall of Fame if you're smart enough. The next screen allows you to bet from \$100 to \$1,000 in each of 10 categories. From there, you're presented with the answers to which you have to figure out the questions. Most of

these answers come from popular culture and aren't quite as intense as the stuff on the TV show. Once the results come in, you go to a Final Jeopardy kind of challenge, where you can bet everything you've previously won on a single question.

Hyper-Trivia Challenge's origins are typical of a lot of the Web. Originally, it was a "modest E-publication with local [Toronto] information and some quirky stuff," according to co-creator Greg Rubidge.

The maximum score possible on the game —20,000— is achieved by betting the maximum on each question, getting all of the questions right, and betting everything on the final jeopardy challenge. Unfortunately, the game and my Achilles heel and I will never get a perfect score, because it always seems to include two sports questions. —WKC

net rating: overall: **A**

a clean, crisp organization and some useful features lacking at some of the larger sites. Want to check your e-mail? Click here. Want to do an Infoseek search without leaving university property? No problem. Add a bit of surreality to your visit by clicking on the "What's This?" button, which leads to a page of basic information about using the Web, site statistics, etc. So, even if they've never been to W.U., first-time users are already getting an education. Still, this handsome site lacks the content depth found at some other universities. —TG

net rating: overall: **B**

Web 66

<http://web66.coled.umn.edu/>
The mission of Web 66 is to provide resources to help K12 schools get on the Web. This may seem a questionable goal with all the hype about whether the Internet is a safe place for kids, but the Web master clears that right up by quoting headlines in his personal rants section that indicate how much more dangerous the outside world is for kids. Web 66 has instructions for educators to set up Web servers, and a very impressive list of K12 schools from around the world that are online. —WKC

Internet Athlete

<http://www.athlete.com/>

I'm afraid the Internet Athlete, "your worldwide source for athletic information," is down for the count. It's supposed to be a place where runners, swimmers, bikers, and triathletes find out about upcoming races and results, teams, features articles, and the inevitable products — but nothing is open past the top level. Worse yet, the latest date on the page is July 1995. Folks: We would gladly trade a nice clean home page for some gritty, useful information. You did it backwards, and we have no reason to visit. —KW

Classics and Mediterranean Archaeology Home Page

<http://rome.classics.lsa.umich.edu/welcome.html>

It's appropriate that a site dedicated to the past is so stuck in it. Don't get me wrong: Someone did a terrific job of gathering far-flung Web links and centralizing them in a format handy to scholars. But in the end, it's just an extension of a Gopher site: text-based, with few helpful internal links or explanatory texts. User-friendly it ain't. Don't expect any commentary on which sites are worthwhile (or even appropriate to your needs). Still, content is more important than technical flash in academia, and this site is a wonderful portal to other resources. —TG

Diogenes' Links to the Ancient World

<http://www.snider.net/lyceum/>

Diogenes, a cynical philosopher from Plato's time, used wit and humor to drive home his points. While this site has flashes of wit (e.g., calling Homer a "media correspondent for the gods"),

Manchester Institute for Popular Culture Website

manchester
institute
for POPULAR
CULTURE
on-line

Manchester could very well be the prototype for twenty-first century urban life. It exemplifies the regeneration of a derelict industrial city for post-industrial urban use. In the 1980s, British youth found its deserted warehouses the perfect places to host raves. While it's easy enough to dismiss raves as "all-night dance parties," the fact that the phrase "rave community" exists suggests that there was some minor social revolution going on. What better location for a think tank devoted to the study of popular culture? So, the existence of the Manchester Institute of Popular Culture (MIPC), based at the Manchester Metropolitan University, is no surprise. And, with the entry of the Web into the lexicon of popular culture, the MIPC would just have to have a Web site to have any kind of credibility as an authority on popular culture. According to Dan Hill, a research graduate at the MIPC, the medium of the Web amplifies the positive aspects of popular culture. Mr. Hill says the Web allows "artists to distribute their work via the net, bypassing the cultural industry infrastructure and the power structures of the art world." The technocracy of the Internet is a lot easier to negotiate with than the art buyers, gallery owners, and critics of the art world. One agenda of the MIPC, and of many cultural theorists worldwide, is the promotion of democracy. This does not refer to the political structure, but to the notion of every member of society having a voice. So, MIPC is working to ensure "that the new digital popular culture is not limited to the privileged minority who currently have access."

But the MIPC Web site is not just a forum for studying cul-

ture; it's a part of that culture.

The funky design of the logo is more suggestive of modern graphic design than the title of a stodgy academic paper.

One purpose of the site is to

disseminate information on conferences sponsored by the MIPC. A recent one was titled "Fanatics! Football and Popular Culture in Europe," which is scheduled to coincide with the 1996 European Football Championship. A further example of the eroding delimitation between critical studies and subject matter. —WKC

LIVING POETS

<http://dougald.derby.ac.uk:80/>

The Wild Wilde Web Welcome

<http://www.clients.anomtec.com/oscarwilde/>

To be natural is such a very difficult pose to keep up."

— Oscar Wilde

A poet in the nineteenth century could not be successful by holing up in a garret and writing madly. A social dimension was required. Wit was required. A really good poet had to be able to show up at a party and say

called "Serious Games: Interactive Images." He chose to create an interactive piece about Wilde, using the paradigm of a Victorian parlor game. Some time later, he was asked to be "the participating American artist in ArtAIDS (http://artaids.dcs.qmw.ac.uk:8001) — a project of AIDS-related images that went online on

World AIDS Day, 1994." This introduction to HTML gave him the expertise to program the Wilde site.

The graphics on the site are particularly exceptional, which is no wonder, since Mr. Tidmus has been a graphic designer since 1984. He says he "spent seven years freelancing

Apple Computer's advertising graphics for BBDO and Chiat-Day."

One of the most extensive areas on the site, and probably the most useful, is the bibliography section — a list of books about, or with refer-

ences to, Wilde. The only draw-

back is that these books should probably have been linked to some other online reference that provides further information about them. When I asked Mr. Tidmus what Wilde might have thought about the Web (a question I acknowledge is pretty stupid), he kindly replied, "I think Oscar would have applauded the accessibility of knowledge and deplored the lack of beauty inherent in much Web design." —WKC

net rating: overall: A

something, at least one sentence, that would be so very clever as to be repeated by more than one person, thereby assuring the poet's reputation. In the twentieth century, wit was practiced by Dorothy Parker and the members of the Algonquin Round Table, but in recent times, wit seems to have fallen in disfavor.

Oscar Wilde was a master of wit, which is the focus of Michael Tidmus' Wild Wilde Web. Originally, Michael was just going to put a page on the Web of Wilde's witticisms, but he decided that there had to be some kind of contextualization, so the site expanded to include a biography, a list of Wilde's works, other people's quotes about Wilde, and links to Wilde-related sites on the Web. The material on the Web site was salvaged from an exhibit Mr. Tidmus had

VIBEonline

<http://pathfinder.com/@@rOPfiGGhAMAQHte/vibe/VibeOnline!.html>

What makes the VIBE site the music Site of the Month? Could it be the ultra-amazing graphics? Maybe it's the astonishing amount of original content, updated on a weekly basis. Or, maybe it's the level of interactivity the site initiates, with live chats and reader surveys (on both serious political issues and just-for-fun follies). No, no,

maybe it's the diversity of subject matter. Though

mainly musical, VIBE touches on all

aspects of

entertainment;

movies, video

and literature.

O.K., no, I get

it, it's definitely

the quality

of the reviews

section, with a

specifically hot Web-site-of-the-week review — a thorough walk-through of a great

online creation. Hmm. Yes. Yes! YES! It is all of these things. In a word (or two), VIBE

ROCKS!

It's a fantastic companion to the paper version. In fact, one would have to wonder (less the coffee table status quo reasons): Why buy the paper version at all? Everything you could ever want to know about the VIBE world of rhythm,

blues, rap, and traditionally African-American entertainment is wrapped up in a snazzy, I mean super-snazzy, hypertexted format, whenever you want it — for free!

Technically, they pull off some nice stunts. The image maps are beautiful, but not server-bogging.

The tables are aligned perfectly (no matter what size your browser is set to). The colors and fonts all work especially well with the overall design (kudos to the artists.) And the CGI scripts (for all that interactive stuff) run superbly. This is no small feat, mind you.

I reviewed the December issue of VIBE, where I found an outstanding article about the history of black super-heroes (in chronological order complete with cool graphics).

The reader survey opinion poll chose the

controversial

topic of abortion

(with a nonparti-

san non-bias):

Are you pro-life

or pro-choice

(and why)? And,

of course, the feature stories revolved around the year in hip hop, with comprehensive coverage of all the chart stoppers and flavors of the 1995 season — Mariah Carey, Notorious B.I.G., Tupac Shakur, and Adina Howard, to name a few. And there's a compelling interview with anti-rap activist and proclaimed feminist Delores Tucker. (I'd suggest a look at the back issues if you missed this one.) Overall, I find it difficult to understand how anyone wouldn't like this site, even if VIBE isn't your chosen music scene. It's everything a good Web magazine should be, and more. —SK

net rating: 🍷 🍷 🍷 overall: A

Though there's lots of stuff in it, Rockweb lacks soul.

Rockweb TM Interactive

<http://www.rockweb.com/>

Rockweb has a lot of stuff in it. The good things include the "House of Boo" (a decent rock zine), Web-based chat rooms dedicated to different bands,

some cool graphics, and a moderate collection of RealAudio interviews and songs. The rest of the site feels like a publicist's wet-dream. Filled with dry, corporate propaganda, tons of bandwidth-hogging promo pictures, and hardly any sound samples, Rockweb lacks soul, and offers no easy way to navigate. It's all flash, and no rock. —MP

RootsWorld Music On The Net

<http://www.rootsworld.com/rw/>

From flute music of the Andes to Mexican polka, RootsWorld is a one-stop shop for information on world music. Extensive artist catalogs, music reviews,

recommendations, and many magazine features on the world music scene shape RootsWorld. While the graphics are generally good (I like all the accordions), it does not have many sound samples, nor an easy way to navigate this large site. Still, RootsWorld is fun to browse. —MP

net rating: 🍷 🍷 🍷 overall: B+

The CRYPT

<http://www.henge.com/~stooge/>

White Zombie has been rockin' for 10 years, but only recently has the group broken into the mainstream. Old and new fans can follow satanically inspired image maps to band photos, bios, video, sound clips, and a complete discography. The cool cartoony graphics set an edgy tone, and can be easily navigated around by low-bandwidth users. Although the site has lots of good info and looks cool, it feels empty. The fan presence is here but not felt (the letters section was removed due to lack of disk space). —MP

net rating: 🍷 🍷 🍷 overall: B+

The George and Ira Gershwin Homepage

<http://www.sju.edu/~bs065903/gershwin/homepage.htm>

For the Gershwin fan, this is the creme de la creme. It's a full-on archive that must have taken quite a lot of time to

This archive photo of Ginger Rogers and Fred Astaire in "Shall We Dance" is among the offerings of this site.

politics

Amnesty International

<http://www.io.org/amnesty/overview.html>

Amnesty International's online site makes it easier than ever for people to advocate freeing political prisoners. The site lists hundreds of Urgent Action notices and studies of prisoners of conscience, and allows you to write your letters by e-mail. It also contains a huge collection of human rights records and trends in particular countries. —BB

net rating: overall: **A-**

Constitution Action Party

<http://www2.ari.net/home/CAP/>

Calling itself the "majority party for the 21st century," CAP opposes what both the Democrats and Republicans are doing, and makes no bones about it.

The right-wing "constitutional purists" behind this page condemn both Democrats and Republicans, and advocate a return to the simpler days of Jefferson and Monroe. Via sarcastic (and sometimes entertaining) missives, they defend the supreme authority of a Christian god, attack gay rights, and condemn what they consider to be illegal taxation of the electorate. They temper their platform with criticism of racism and militarism, and suggest that the voter revolt of 1994 was misidentified as a Republican endorsement. The site is easily navigated, though artistically flat. —JP

net rating: overall: **B**

GOP In-Fighting Update Series

<http://www.webcom.com/~albany/infight.html>

The site is premised on the notion that the Religious Right is a minority with control of the Republican party. By highlighting the division and internal wranglings in short articles posted several times a week, the creator hopes to help rectify this situation. Those with an interest in the internal politics of the GOP will probably find it fascinating. —BB

net rating: overall: **B+**

Holt Labor Library

<http://infopark.newcollege.edu:80/holt/>

This page is fairly devoid of information. It states, in a cursory manner, what the Holt Labor Library is and how to get there. For those of us who do not live in San Francisco, there isn't a lot here. The exception is the fairly large and well-

annotated list of labor videos for borrow. This would be a very useful site for labor activists if the library got more of its collection on the Web (and also got a good Webmaster). Worth checking back to see if the site grows. —BB

net rating: overall: **C-**

PeaceNet Home Page

<http://www.igc.apc.org/peacenet/>

This is probably the most comprehensive list of peace and justice issues on the Web. The site contains an exhaustive collection of links to sites that promote anything from African-American rights to voting issues. Unfortunately, it doesn't go much beyond a list of links. If you're looking for information, you most likely will not find it on this site. What you will find is a link to it. —BB

net rating: overall: **A-**

Republican's Web Central Home Page

<http://republicans.vt.com/gop.html>

The big question is: Do links count as content? To a degree, yes. It's something like 1/20th of a point for each link. So, Republicans Web Central has content because it has lots of links. The pastel background is kind of ugly, and the pictures of Republican candidates for President don't help the aesthetics much. The home page is particularly uninspired, featuring a title and four links. On the positive side, though, all the links seem to work. —WKC

net rating: overall: **B-**

The Conservative Corner

<http://www.vanderbilt.edu/%7Egreenst/cc/>

This political site is also limited to links, without any original content. All the links have picture icons to represent their sections. The picture of Reagan is a bit tasteless, considering his current mental condition, and the picture of Limbaugh is just plain ugly. "Conservative Corner" is a misnomer, though, because most of these links are representative of "neo-Conservatism," which became popular in the 1980s. —WKC

net rating: overall: **B**

The Sea Shepherd Conservation Society

<http://www.envirolink.org:80/orgs/seashep/index.html>

The hardest-hitting, most radical environmental group on the high seas now comes to the Web. It's always enjoyable to read about the Sea Shepherds humiliated and devastating the eco-villains of the world. If you have never heard of this controversial group, check this site out. The group swears by nonviolent confrontation. Its Web page is well-designed, and it's the first one I've run across that uses frames. Be sure and read the captain's logs. I found a significant number of small technical problems with the site, but they should be fixed by the time you read this. —BB

Welcome to Scampaign '96 Headquarters

<http://www.comedyusa.com/Home.html>

The 1996 Presidential election is gearing up, and candidates are marching out of the woodwork like a professional clown troupe, making us laugh until we cry. Well, the crying may have more to do with so many of these freaks being absolutely serious about the various ways they want to control our lives. The Scampaign '96 site should provide some needed relief from all the scary rhetoric. The site is run by a bunch of comedians who are creating their own style of political journalism, a style that has become necessary, considering the ridiculous lows to which current campaigns have sunk. The home page is updated frequently with news and commentary from the front, and should continue up to the fateful day when we pick the '97-'00 version of the president. The Scampaign '96 commentary is also distributed as a mailing list, which can be registered for through a form on the site. If you have friends without Web access, get them on the mailing list. Barry Weintraub is the mastermind of Scampaign '96, and he makes no bones about his political cynicism. "We hope to entertain and inform and unite disaffected voters through the common bond of cynicism," he says. If this is the only way to get people to vote, then rock on, little warrior. Another area of the site has profiles of all the presidential hopefuls, plus quotes to let voters know the candidates positions on various issues, like this one

from Phil Gramm: "I was a foot soldier in the Reagan Revolution. And as president, I want to finish the Reagan Revolution." Sometimes, no comment is necessary.

The site has its own cabinet, filled by people like Johnny Steele, Minister of Rants; Nate Hale, Minister of Treason; and Will Durst, Minister of Caustic Commentary. Each "Minister" has his or her own opinions to offer, and they're not all as left-leaning as the general tenor of the site. Also, look for "The Noah Letters," a correspondence between common citizen Noah Fillmore and the various candidates about their positions on the issues, published exclusively on this site. Mr. Weintraub has big plans for Scampaign '96. "We hope to use the site as a springboard to establish a permanent comical journalistic presence." Inform and entertain, with cynicism and justice for all. —WKC

Welcome to ELLE

<http://www.ellemag.com/>

Though I may not be the fashion vixen you think I am (ack, ack), I do know a good Web site when I see one. And, though it may pain me to rain such praise over a fashion magazine, I have no choice but to do just that. *ELLE* has got a great Web development team (or so it appears) and the site is stunning. *ELLE* won't taunt you with teaser paragraphs and dead-end links. It's nothing but top-rank professional. The site walks you through selected features on style, fashion trends, society, and culture from last month's issue, and gives the table of contents for the current newsstand issue (wouldn't want the paying subscribers to get miffed). The features are long enough to keep you busy for hours, and they're laced only with the highest quality graphics. The haute couture set would be proud. Dahhling, pass me the Gray Poupon and the Netscape, please! But that's not all. *ELLE* also invites repeat visits with a model gallery (for gawkers and fans of the world's top super models); a link list of *ELLE*'s favorite online fashion hot spots; and an event list that'll "put you in the thick of things." Sure, they lay it on kind of "thick" themselves at times, but isn't that what glamour is all about? But I do have a complaint with the "numerology" report. When I checked in December, it gave me a reading (with an oh-so-clever birth date calculator) for October. Oh well, we can't all be as perfect as Linda Evangelista.

The organization of the site is superior. It's an easy and intuitive path to uncover the feature stories, jump to trends, get in touch with editors, and subscribe (though it wasn't quite ready for online transactions when I checked — get ready for the 800 number—I suspect it won't take much time for *ELLE* to remedy this). Overall, *ELLE* is the best fashion magazine on the net. And the special tenth anniversary page is super-cool, with almost animated *ELLE* covers of past years. —SK

GOSHEN Global Online Service Helping Evangelize Nations

The Church of Virus

<http://www.lucifer.com/virus/>

Now entering the *Virus Zone*. Closed and/or irrational minds may be offended. Open and/or rational minds may be infected." This opening warning and the all-black background set the tone for this site. You're given the choice of clicking on high- or low-bandwidth (always a nice option) and then you're off.

The entire rationale behind Virus is to infect readers with a broad range of perspectives, and to encourage the questioning of faith and spirituality. This site is not intended to "trash" religion or horrify "believers" with blasphemy and irreverence, though at times it might be mistaken as such with links to paganist and satanic resources. The biases are clear from the start, but not overwhelming or pushy.

There are lots of curious bytes to Virus. Separate from one another, they might seem trivial, but taken all together, they help create comprehensive and well-supported arguments. One link will take you to a page about Daniel C. Dennet's book, *Darwin's Dangerous Idea*. The page sports reviews that have been printed in national journals, and also invites readers to submit their own opinions of the book. The same is true with Kevin Keely's book *Out of*

Control: The Rise of Neo-biological Civilization.

Again, the Virus creator is seeking surfer participation and interaction, all the while allowing us to ingest his creation and make our own decisions about it.

The rest of the site is filled with statements, summaries, and observations about various movements of philosophy, politics, religion, science, technology, and evolution. Virus is relentless in its pursuit, striving to infect us again and again. And, what I found most valuable beyond the overwhelming amount of time and effort taken to build this site (intense graphics and layout aside) is the reading list. It's a hyperlink hoe-down of literature to move you through the process of deciding what religion is or isn't right for you. Many of the recommended books have links to summaries, or places they're available online. And, to supplement this reading list, there's also a page of Internet resources to spawn further questioning and perhaps a few answers.

There will be some who have no need for this site and will most certainly be offended, but there are many others who should find great thought-provoking pleasure. —SK

THE ULTIMATE UFO PAGE

<http://www.serve.com/tufop/>
UFO mania (or is it awareness?) has reached an all-time high. This site appears to be an attempt to capitalize on this to sell books. The site features several articles, most of which are links to other sites, and a few pictures. Links to only 15 other UFO sites are provided, surprising considering the deep interest in this subject on the Web. The design is good and if the page were greatly expanded, it would be an excellent site. Perhaps we should all send in our abduction experiences to be added to the site. —BB

Atomic Books Electronic Catalog

<http://www.clark.net/pub/atomicbk/catalog/catalog.html>
The electronic catalog is the online version of the physical Atomic Books store in Baltimore, MD. And I know just how to get there because there's a map on the site. The book selection is great; it consists of all the weird and eclectic stuff you won't find at Barnes & Noble. Besides underground comic books and graphic novels, there are sections for revenge, hiding your identity, and trash culture. Unfortunately, online ordering isn't very sophisticated. No shopping basket; you just have to type the name of

The Internet Book Shop

<http://www.bookshop.co.uk/>

IBS claims to be the biggest online book shop, and while biggest is not always best, in the case of a bookstore, it means a lot. O.K., browsing through a bookstore is like meditation for me; I lose all sense of time, who I am, where I am. That is, if it's a big enough bookstore, if I can get away from any windows to the outside world, then you won't see me for at least a couple of hours. IBS, with 780,000 titles, is big enough. The fact that it's online means no distractions, like sirens from the street, or loud people.

Browsing a bookstore's shelves is a lot like surfing Web pages, which is probably why an online bookstore seems like such a good fit. As far as online commerce goes, it's easier to ship books all over the world than it is to ship cars, or pets. And shipping is an important factor with IBS, because it's based in Britain, or Oxford, to be exact. Worldwide shipping has a lag time of four to 14 days, which doesn't matter a heck of a lot when you're ordering a title you can't get from any local bookstores. For Web pages, a U.K. address also means slower response time, which could be a problem if you're

doing extensive searches. Oh yes, there's a search utility, an essential resource for a site like this.

It's quick and easy to use, allowing you to search by title, author, ISBN, or publisher. If you're not sure where you want to start browsing, then the subject listing might be the place for you, although I did find the subject breakdown just a little bit weird, such as the category "Fiction, 'True Stories,' Humour." I'm not really sure what True Stories have to do with fiction. In fact, I think they are kind of the opposite. The site also has the Bloomsbury Good Reading Guide, a compendium of recommended authors and books, which is an excellent way to find new favorites. What really endeared me to IBS was its special focus section on Hergé's *Tintin*. Not only does it have every one of the graphic novels, each page has picture from the cover. —WKC

Classifieds 2000

<http://www.classifieds2000.com/>
Classifieds 2000 specializes in cars. Sellers list free; buyers can easily access offerings either by scanning entire listings or scanning desired criteria. My search string of "Japanese car, manual, under \$1,700" came up with more than a few good leads. If the car of your dreams isn't currently listed, a "cool notify" feature will e-mail you when one arrives. Classifieds 2000 currently only serves the San Francisco Bay Area, but expansions to Los Angeles, New York, Chicago, and Boston

This automotive classifieds site e-mails you if the car of your dream gets listed.

are in the works. Real handy, and they took time to make it look good, too. —RR

net rating: overall: B

Classified Flea Market

<http://www.cfm.com/>
All ads are in the 510 area code (which is the East Bay Area, that vast district across the water from San Francisco), unless

otherwise noted. Again, real handy if you're in this part of the country; means bupkis if not. The site offers free listings, simple search by any of the 90 categories, etc. The novelty here is CFM's ad of the week, which, on this outing, was a beaded wedding dress. —RR

net rating: overall: B-

eMail

<http://eMail.com/>
eMail is not exactly ready for prime time. The promising front-end covers a multitude of sins — skimpy product lines, unappealing text blocks describing those products, dead-end screens just two layers from the top. Basically, it's an inch-

deep cover for just a few items, and not ones generally considered "must-have." The assortment is strange, too: mens' suits, gardening magazines, T-shirts, wooden picture frames, the ubiquitous Web florist, spices, coffee and tea, commercial leasing — not exactly a "full-service" mall. Next time, eMall, get your vendors in a row before declaring yourselves open for business. —KW

net rating: ☹️ 😊 🌟 overall: D

EPage Internet Classifieds

<http://ep.com/>

This general merchandise online ad paper claims 75,000 actual readers ("not hits!"). Commercial ads support the free placements by regular humans. Searches are available by region and subject, which are broken down into detailed sub-groups. It could be a good source to find what you're looking for, but it needs more ads to choose from. Still, if you have something to sell, it can't hurt to post it here. —RR

net rating: ☹️ 😊 🌟 overall: B-

FreeAdz Classifieds

<http://www.freeadz.com/classifieds/>

This electronic version of the Boulder County, CO paper lets individuals list free. Businesses, collectors, and breeders (which, I assume, refers to people who deal in animals, and not the slang expression for heterosexuals) pay for theirs. Also included is a "Soap Box" page, where you can rant about any issue you want, as long as you present solid arguments (which takes the fun out of it, if you ask me). Useful, but only if you live in the area, or have a desire to see what they're trying to unload out there. —RR

net rating: ☹️ 😊 🌟 overall: C-

Offworld Metaplex

<http://offworld.wwa.com/>

An extremely groovy and eclectic shopping mall with an outerspace theme. The credits read: "Offworld Metaplex, founded by Slith Darkmass, 2035." One purpose of the site is to advertise Darkmass Productions' Web design services, so the

Offworld Metaplex is the place where "shopping is just a light year away."

graphics are really good, although somewhat unrestrained. Unfortunately, it lacks one very important factor that most malls

have: shops! You know, places where you can buy things? It does have enough goofy stuff, like art galleries, a wishing well, and the black hole of pain, that it's fun to go there anyway. And you won't spend any money. —WKC

net rating: ☹️ 😊 🌟 overall: B+

marketplaceMCI HOME

<http://www2.pcy.mci.net/marketplace/index.html>

MCI is making a valorous attempt to corral online shoppers with its Marketplace. There are several points in its favor: It's signed up a few name-brand retailers (Hammacher Schlemmer,

Beauty Express' fragrances are among the offerings at marketplaceMCI.

Lillian Vernon, Nordstrom, Footlocker, Mac, and PC Zones); the page is fairly easy to navigate and comprehend; and you don't have to register in order to browse. But none of the retailers offers a full line of products, or anything approximating their (paper) catalog selection. It's clearly just the beginning, and though you may not be tempted to shop here yet, chances are good you'll want to come back. —KW

net rating: ☹️ 😊 🌟 overall: C+

The MegaMall

<http://infotique.lm.com/cgi-bin/php.cgi?megamall.html>

To put it simply, MegaMall is just a tad overblown. There are impressive front doors, navigational text, and graphics aplenty, but these are merely a facade for a hodgepodge of small vendors with fairly scant offerings. The categories are many (antiques, jewelry, sporting goods, pets), but the pickings few. MegaMall focuses on unappealing text blocks and has few pictures. Also, a fair part of its site actively promotes the mall to new clients, which lessens a customer-friendly feel. If this is what shopping online is all about, "traditional" malls don't have much to worry about. —KW

net rating: ☹️ 😊 🌟 overall: D

Monkey

<http://www.digitalrag.com/mirror/monkey/monkey.html>

This is primarily a store for hats and shirts, with unique artwork by Ken Brown. Wait a minute. Did I say "artwork?" This is clothing with prints of things like coffee cups. Artwork may be a stretch, but it is unique. The prices seem reasonable, although to actually order anything, you will have to revert to voice communications. Seems like good

Cartoon animals printed on T-shirts and accessories is the selling point here.

gift material for people in their early 20s. —WKC

net rating: ☹️ 😊 🌟 overall: C

Speak To Me Catalog

<http://clickshop.com:80/speak/>

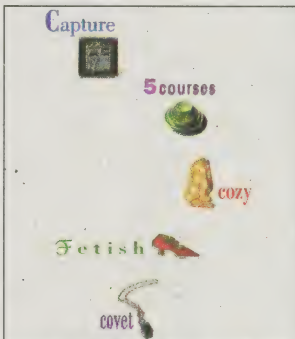

The unifying element to each item sold on this site is that all of them speak. Ahhh, the wonders of microchip technology. The catalog runs from the serious — tapeless recorders — to the humorous — swearing keychains — to the bizarre — a talking spatula. Talking spatula? At this point, we should all collectively say: "Go figure," and get on with our lives. Complete online ordering capability, but the graphics are way-bad. Lots of audio clips, though. —WKC

net rating: ☹️ 😊 🌟 overall: B+

Violet

<http://www.webcom.com/~gabriel/violet/home.html>

This classy looking site makes just a few products very appealing. The slightly precious categories ("Cozy" for two styles of comforter, "Covet" for earrings

Violet uses exquisite artwork and an exceptional image map.

and a necklace, "Handy" for a toothbrush holder) are still lovely to behold on the screen, and the products are not items you run into every day — as the prices will testify. Even so, the images of the products, their brief and informative descriptions, including price, will surely whet the appetite of shopping devotees. Ordering is easy; you can choose to charge by phone or fax if you're nervous about credit card numbers. Put your bookmark here. —KW

net rating: ☹️ 😊 🌟 overall: A

Virtual Book Shop

<http://www.virtual.bookshop.com/>

Resort Sports Network

<http://www.RSN.com/>

Skiers of the world unite. Well, skiers, snowboarders, and resort lounge lizards of the world unite. This site aims to be a one-stop shopping guide to winter resorts in the U.S. It does an outstanding job. RSN starts with an ultra-clean front page laced with smooth-style graphics (nice icons), and a comprehensive main menu — what's new, video clips, a resort locator, events schedules for the resorts you locate, contests to play, links to follow, and a series of spy cams to show you what's really happening in these vacation havens. It's packed.

RSN maintains a huge college students section, and although it has some cheesy bits and bytes about what is "Rad" and

"Raging" (like the silly little dictionary

of "cool" words), it also has some very useful information. The extreme sports page is great, with a comprehensive list of trails and runs for the dangerously inclined (the mountain biking in Maui interview is fabulous). There's a special contest area "for college students only." The site also helps you organize group trips and guides you through an events calendar for the various resorts (it's actually the same as the events calendar linked from the top page, but in different, perhaps hipper colors). Most impressive, and important for the budget-minded, the site points you to where you can ski for free. RSN lists resorts that are looking for seasonal instructors and helpers in exchange for free passes.

The video clip collection, though not huge, has a number of high-quality action videos of mountain biking, wind surfing,

and general extreme sport goop. You can also view the scenery from one of 14 resort cams (Vail, Tahoe, Park City, Wildcat, and others), with an updated image every few hours.

RSN sports a Usenet-like, threaded chat section for surfers to converse about the various hot spots and not-spots, trade skiing tips, and ramble about whatever else they want to, which may or may not relate to resort stuff. It's a fairly active list, so definitely check it out.

All the pages load quickly, look great (the creators have mastered their HTML and Netscape extensions), and have lots of information. It's a great site. —SK

The One and Only Morocco WWW

<http://www.agadir.com/maroc/>

Ah, the mysteries of Morocco:

Tangiers, with its connection to ex-pat authors like

Bowles and Burroughs;

Casablanca, made famous the world over by Humphrey Bogart. Fez, known

as the source for shiner hats. While filling in information gaps about Morocco had every possibility of killing the mystique of the place, I had to know more. The One and Only Morocco WWW isn't the only Morocco guide on the Web, but it's probably the best one. I think the trick is not taking "one and only" for its literal meaning.

As a travel guide, it's not the most immediately practical. It doesn't have a complete listing of all the hotels throughout the country. There are no train schedules online. No restaurant listings. This is the kind of guide that tells you a lot about the country, and primarily whets your appetite for going there. It's also the perfect place for the virtual traveler. The virtual traveler might like to know

what the restaurants are like, or see pictures of some of them, but a listing of all of them, with directions how to get there, is unnecessary.

This site covers so much of the culture and what's in Morocco, and there are so many pages, you can get in

pretty deep. The site is littered with pictures of Morocco that illustrate the various sections. History, which goes back beyond Roman times, is covered. The site describes the flavor of 12 major Moroccan cities, and even has some of the most beautiful and use-less maps. They have great graphics, but don't really show much detail as far as streets go. The Moroccan cooking section is probably my favorite, listing recipes for delicacies like Bastela and Couscous. There actually is a section with practical travel information, but knowing how many kilometers of railways there are in Morocco doesn't exactly help me ride them. The whole site was created by two students, Nabil Zary and Mounir El Abrid, and the impression I get is that the site is a labor of love. Versions of the site exist in English, French, Swedish, and Spanish, so it's got the World in World Wide Web covered. —WKC

Park Search

<http://www.lbean.com/parksearch/>

L.L. Bean sponsors this site, so it might be time to forgive it for trying to make the populace of this entire country look like it came from Maine. As a trip planner for you outdoors types, this is invaluable. The first page gives the option of searching by a park's name, which is good if you know where you want to go. Further in is a page to search by park activity, so if you need a place to go canoeing and horse riding,

these can be your search criteria. —WKC

Scotland Travel Guide

<http://www.scotourist.org.uk/stb/>

I think the term "guide" is pretty ambitious for this site. It's a fairly nice-looking site, and it was created by the Scottish Tourist Board, so it's got credentials, but it never get around to telling you what's there. No hotel, restaurant, or shopping listings. Nothing about the local cuisine, and I didn't even see anything about the Loch Ness Monster. There are neat, clickable maps that lead to poetic descriptions of the various regions of Scotland. The first improvement I would make would be to add a bagpipe soundtrack. —WKC

net rating: overall: **B-**

SF Off the Beaten Trail

<http://cyberE.creative.net/~brackish/>

Ah, San Francisco, my favorite city. The home page suggests this is "An Alternative Guide For The San Francisco Tourist," so, of course, I have to inspect it, because I know The City. And, appar-

The storefronts of the Castro are featured on the SF Off the Beaten Trail site.

ently the creator of this site does, too, although he or she hasn't done a very good job of communicating this knowledge via the Web. The neighborhood listings are unfortunately short and a little bit narrow in their view. The bar and club listings aren't very well contextualized, and most lack description. —WKC

U.S. State Department Travel Warnings

<http://www.stolaf.edu/network/travel-advisories.html>

It may seem strange that the official repository of State Department information is at St. Olaf's College in Minnesota, but it makes sense when you consider that Travel Advisories have been available through this site since 1991, long before the Internet was used outside of universities. This site remains a prime source of information for international-minded citizens. If you're a regular traveler, you'll want to subscribe to the mailing list, too. —TG

net rating: overall: **B**

Intrepid voyagers, take note: Travel advisories galore are to be found at this site.

2oz.Dry

http://www.fishnet.net/~zeke-k/
2oz. Dry contains a collection of stuff by Zeke. Inside his realm of Browntown, one will find pictures of Space Toys, a photo album, and some random musings that are the highlight of the site. These little stories are humorous and odd in a Douglas Adams/Terry Pratchett sort of way. Some are good, some, incomprehensible. The best one I read was about myriad terrible fates that would befall you if you didn't tie your shoe laces. With a few more good pieces like that, the site would be a few ounces heavier. —MP

Barbara's Land

http://metro.turnpike.net/B/bluebird/
The one thing going for Bluebird the Mensa Mom's home page is that she's not a college kid on the Web. Her personality only occasionally shines through her barrage of links. Besides the usual ones to friends' pages, hobbies, and interests, Barbara has created a set of links by color. Red Links go to places that have "red" in their name. Blue Links go to "blue" stuff. You get the idea. There is also an index of humor text documents she keeps handy. You know, the kind that are e-mailed around the world seven times? Some of it's funny, some isn't. Some of this page works. Some doesn't. —MP

I'm Full of Myself

http://www.users.interport.net/~dolphin/ego.html
This woman was crowned Miss-Babes-O-Rama on Babes of the Web. Whatever. Site has more links than Hormel has sausage. The creator admits to a huge ego, though claims this is tongue in cheek. One gets the impression that in real life, she is good natured and perky, but that you still wouldn't want to get cornered at a party by her. The site looks good, with lots of dolphin imagery. It has links to "cool corporate" Web sites, an oxymoron if there ever was one. —RR

net rating: ☹️ 😊 🤖 overall: **C+**

Jeff's House of Illegal Bodily Functions

http://www.wco.com/~jeff/
Jeff Gerstmann shows he's a kid with attitude. The very beginning of his home page carries the phrase: "Anger is my business and business is good." Come on, Jeff, let go of the rage. Well, a young man living in Northern California will find a lot to rebel against, and Jeff chooses interesting ways to express himself. There is his page devoted to Jack, the spokes clown for Jack in the Box, the page describing his public access show, Doughnut Wednesday, and his CUD collection, with way too much rap in it. —WKC

Odd Todd's Home Page of Immaturity

http://www.rice.edu/~stadler/
Is Todd Odd? Not any more bizarre than any other net denizen. Todd just documents his life on the Web. In detail. Kermit the frog greets you and with a friendly Hi-How points you to learn about Todd's band, the music he likes, the friends he keeps. There's a special page dedicated to the ceiling of his room. It's all pretty amusing. I especially liked the dictionary of terms he uses in his Web page for words like Erg, Blah, and Farq. Rice University might not be the same without Todd. Just don't call him Weird. —MP

net rating: ☹️ 😊 🤖 overall: **A-**

Phil's Plethora of Pages

http://falcon.jmu.edu/~pollarpe/index.html
Phil swears his pages suck, but they don't. His Werewolf page is really fun, and his Disney Pages are a great resource for fans. Some of his pages however, have a hastily, slapped-together look. If he took the time to index and conform the design of all his pages and personal information a bit more, he'd have a nice portfolio here. It could have something to do with living in Lynchburg, VA. Last time I was there, it reeked of dog food from a local factory. —MP

net rating: ☹️ 😊 🤖 overall: **B+**

Redmond Rose

http://www.halcyon.com/redrose/joan.html

This chronicles Joan L. Grove Brewer's big beef against her former employer, Microsoft. Her story, supported by memos and newspaper articles, is either a truly horrific example of corporate abuse, the ranting of an embittered nutball, or both. She claims that as a consequence of pointing out software flaws, corporate Microgoons beat her up,

resulting in a severe spinal injury. Her argument loses some credibility toward the end, where she goes off on a diatribe about demons, angels and plagues. An altogether strange tale definitely worth looking at. —RR

BOB c WEB

<http://www4.ncsu.edu/~asdamick/www/>

SPIFFO LINKS

I just wanted to take this Kodak Moment to say that you people are not mentioning me often enough in your posts. You have been forgiven, for I am a benevolent human being, but you will simply have to do better from now on."

— The BOB(c) (from Usenet newsgroup *news.misc*)

Thus begins the saga of The BOB(c), net.god and raving egomaniac. Well, there's a reason we're calling these Vanity pages, and The BOB(c), alias Andrew Damick, has done an exceptional job in this extensive shrine to himself. To be fair, there's a lot of material here that doesn't have anything to do with The BOB(c), and a distinction should be made between the online persona and the

man behind the curtain. And one more point on the fairness

angle: Credit for a lot of the graphic design goes to one Beverly White, another well-known net.god.

The BOB(c) is famous throughout Usenet-landia, and has published a lot of very useful newsgroup how-to information on his site, like "How To Create an Alt Newsgroup." There are archives of postings from newsgroups, which is probably some of the most humorous writing anywhere. The BOB(c)'s link library is incredibly large and very eclectic. Just about all of the most interesting and well-designed places on the Web are listed here.

When asked about the purpose of the site, The BOB(c) replied: "Words are my domain. Playing with them is what I do, and

that is evident in my site." It's also pretty evident in his very active Usenet life, where he maintains his own newsgroup, alt.fan.the-bob. As for communication, The BOB(c) says: "I generally get several pieces of e-mail per day concerning my site." Asked whether he had any plans to incorporate Java or VRML into his site, he replied that he has no immediate intentions to do so, but did say he may add "some 3D, animated, talking groundhogs to lead you through the pages and read my poetry to you." And, I should mention that The BOB(c) does not have a list of his CDs on the site. —WKC

the
net

Send me one full year (12 issues) of *The Net* along with the **netPower** disc. I'll pay just \$24.95 and save almost 60% off the single copy rate.

Save even more:

I'll pay only **\$21.95** for 12 issues when I choose to automatically renew my subscription each year at the guaranteed lowest renewal rate! I'll simply check the automatic renewal box and I'll never have to bother with renewal notices again!
